# XAMPP Apache + MariaDB + PHP + Perl

## What is XAMPP?

XAMPP is the most popular PHP development environment

XAMPP is a completely free, easy to install Apache distribution containing MariaDB, PHP, and Perl. The XAMPP open source package has been set up to be incredibly easy to install and to use.

**Download**
Click here for other versions

XAMPP for **Windows**
8.0.7 (PHP 8.0.7)

XAMPP for **Linux**
8.0.7 (PHP 8.0.7)

XAMPP for **OS X**
XAMPP-VM (PHP 8.0.7)

## New XAMPP release 7.4.20

Hi Apache Friends!
We just released a new version of XAMPP. You can download these new installers at http://www.apachefriends.org/download.html.
These installers include the next components:
**7.4...**

Within the contents, there is an uninstaller.

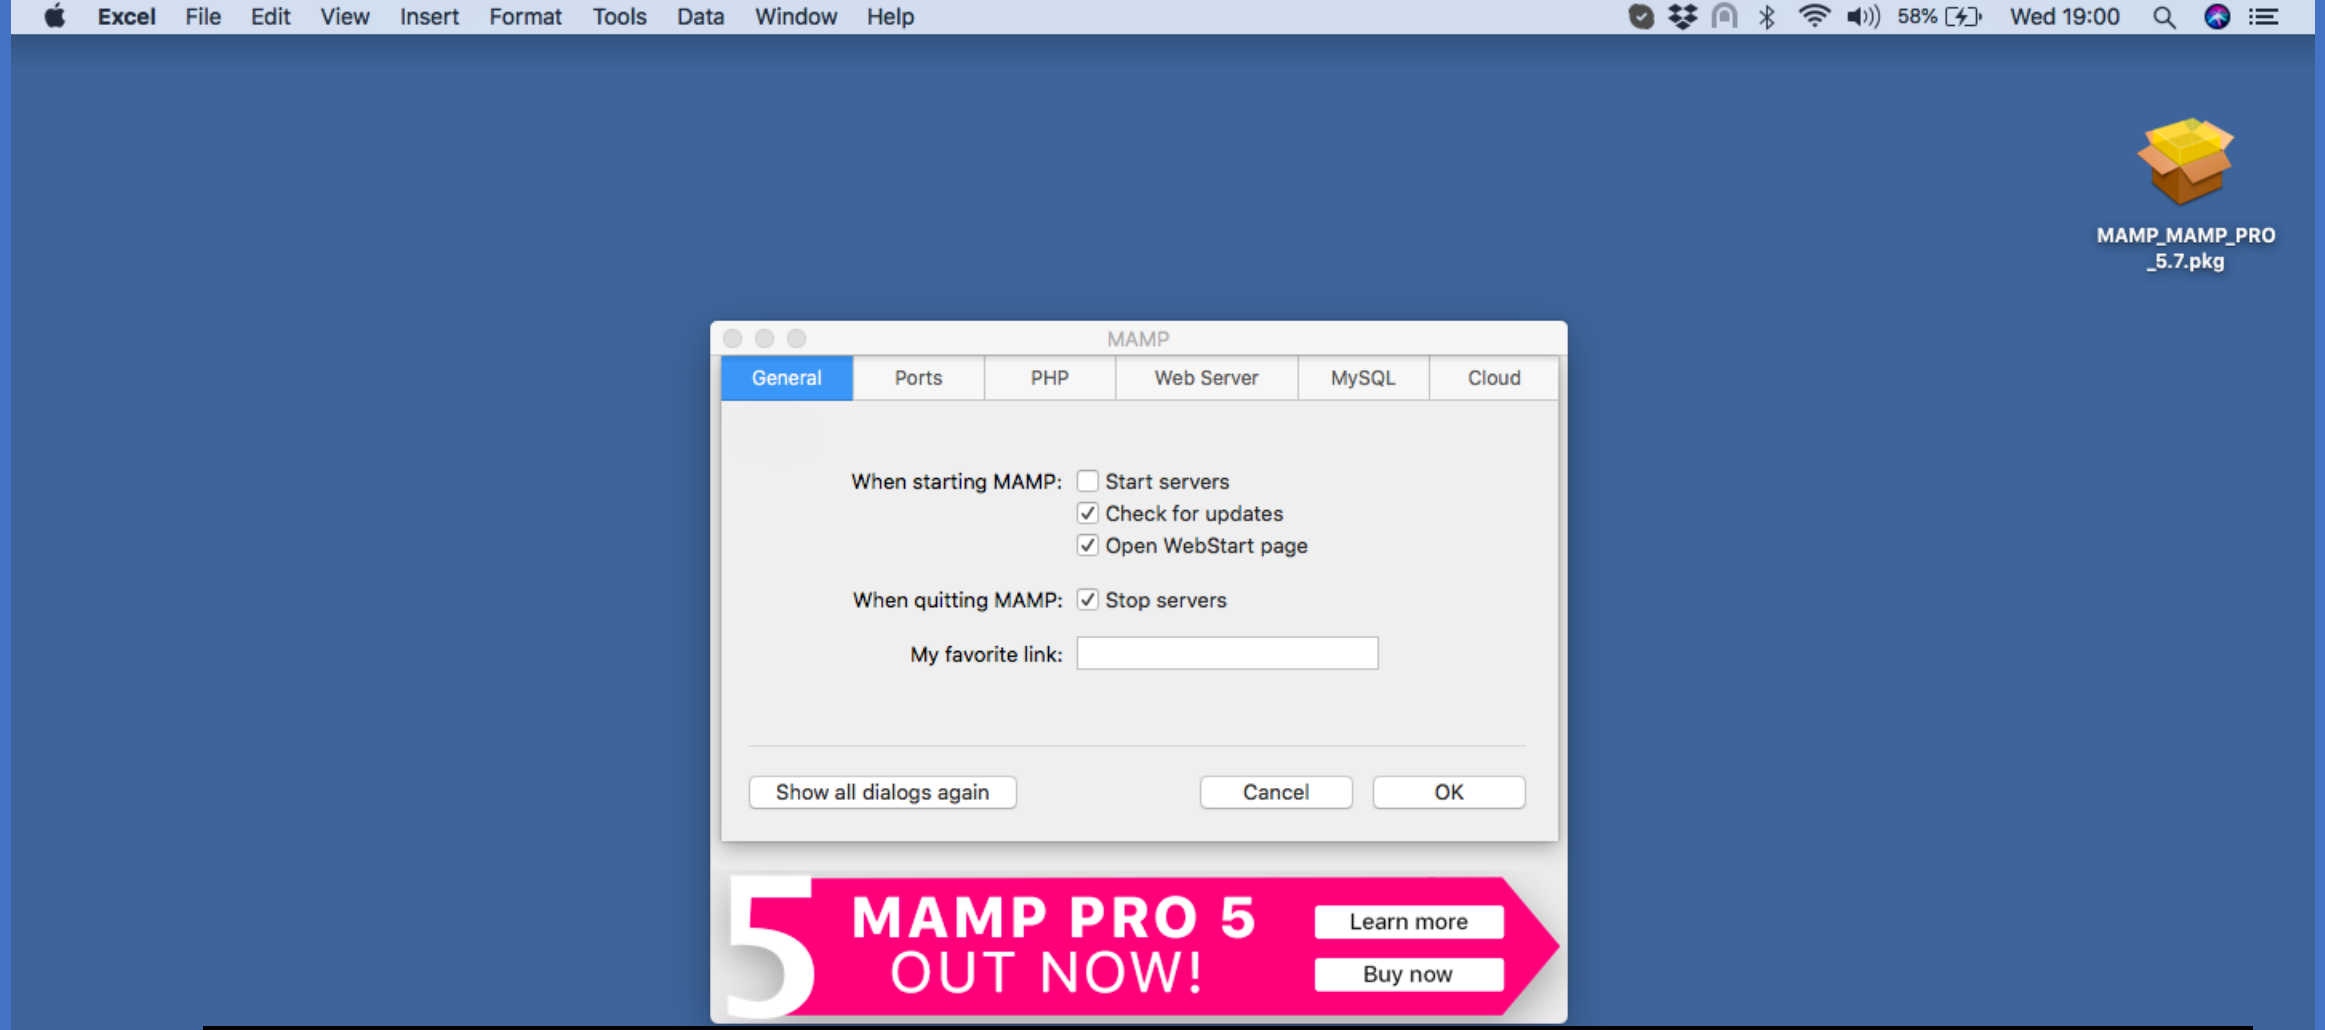

Lets return our attention to the free version. The MAMP executable is named MAMP. Double click to run it.

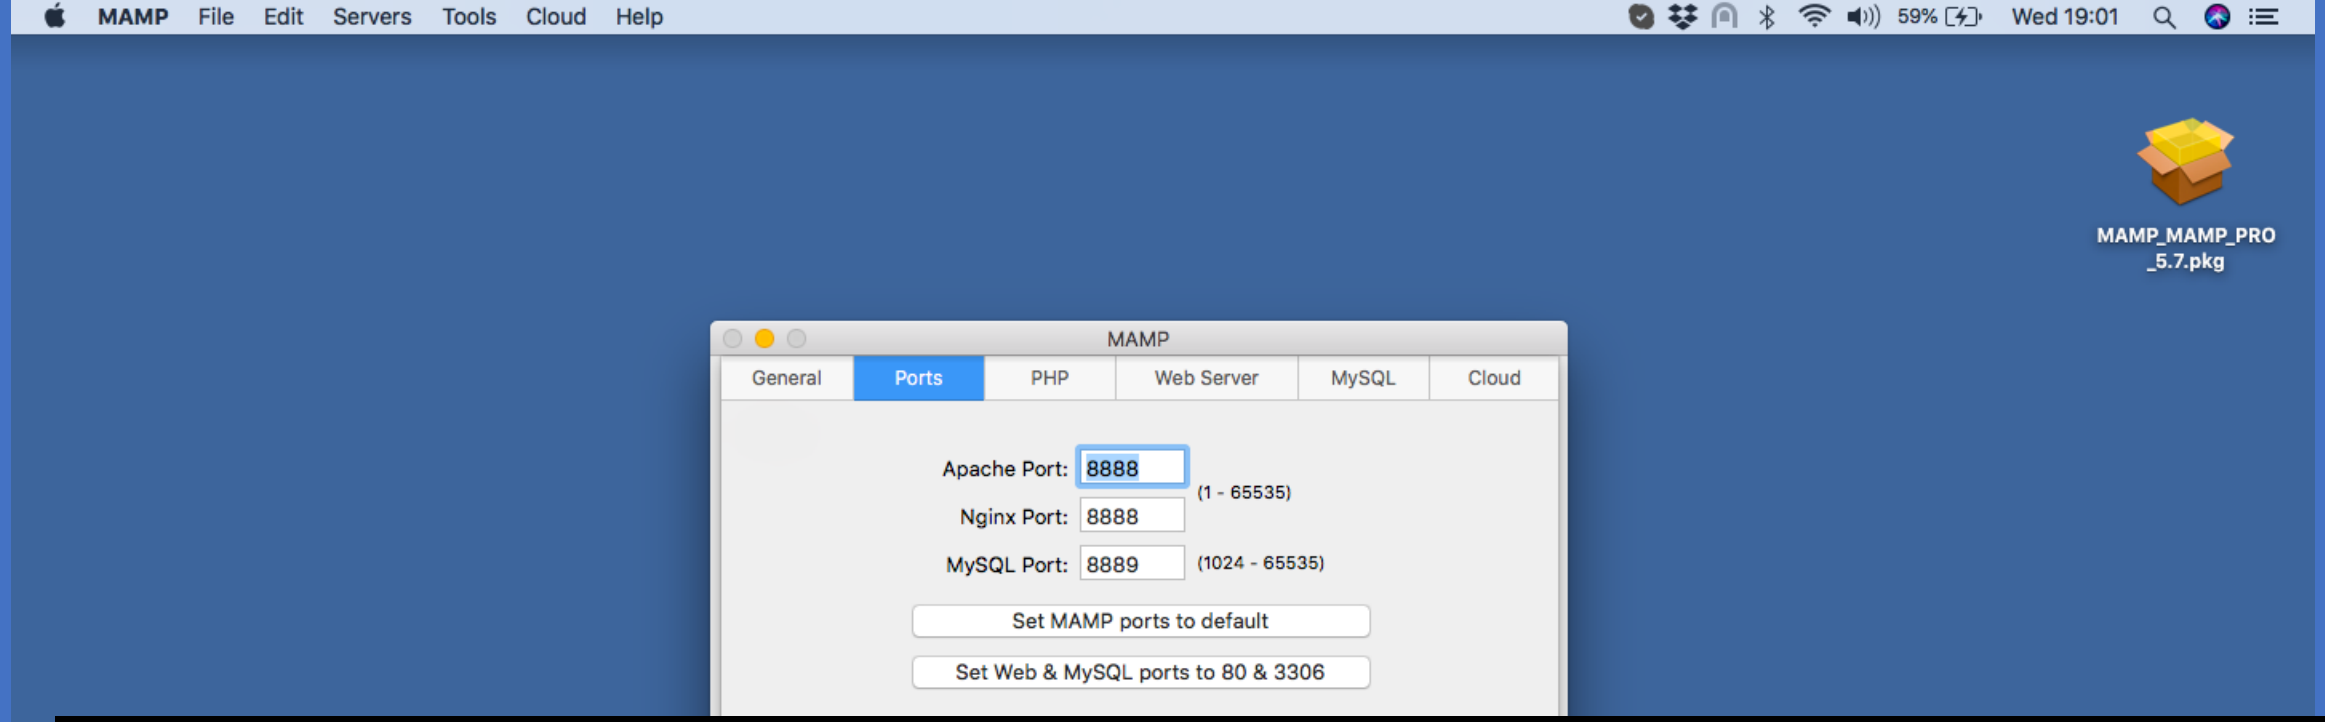

Main MAMP window. Here we can start MySQL, Apache and access MAMP's administration page (WebStart page)

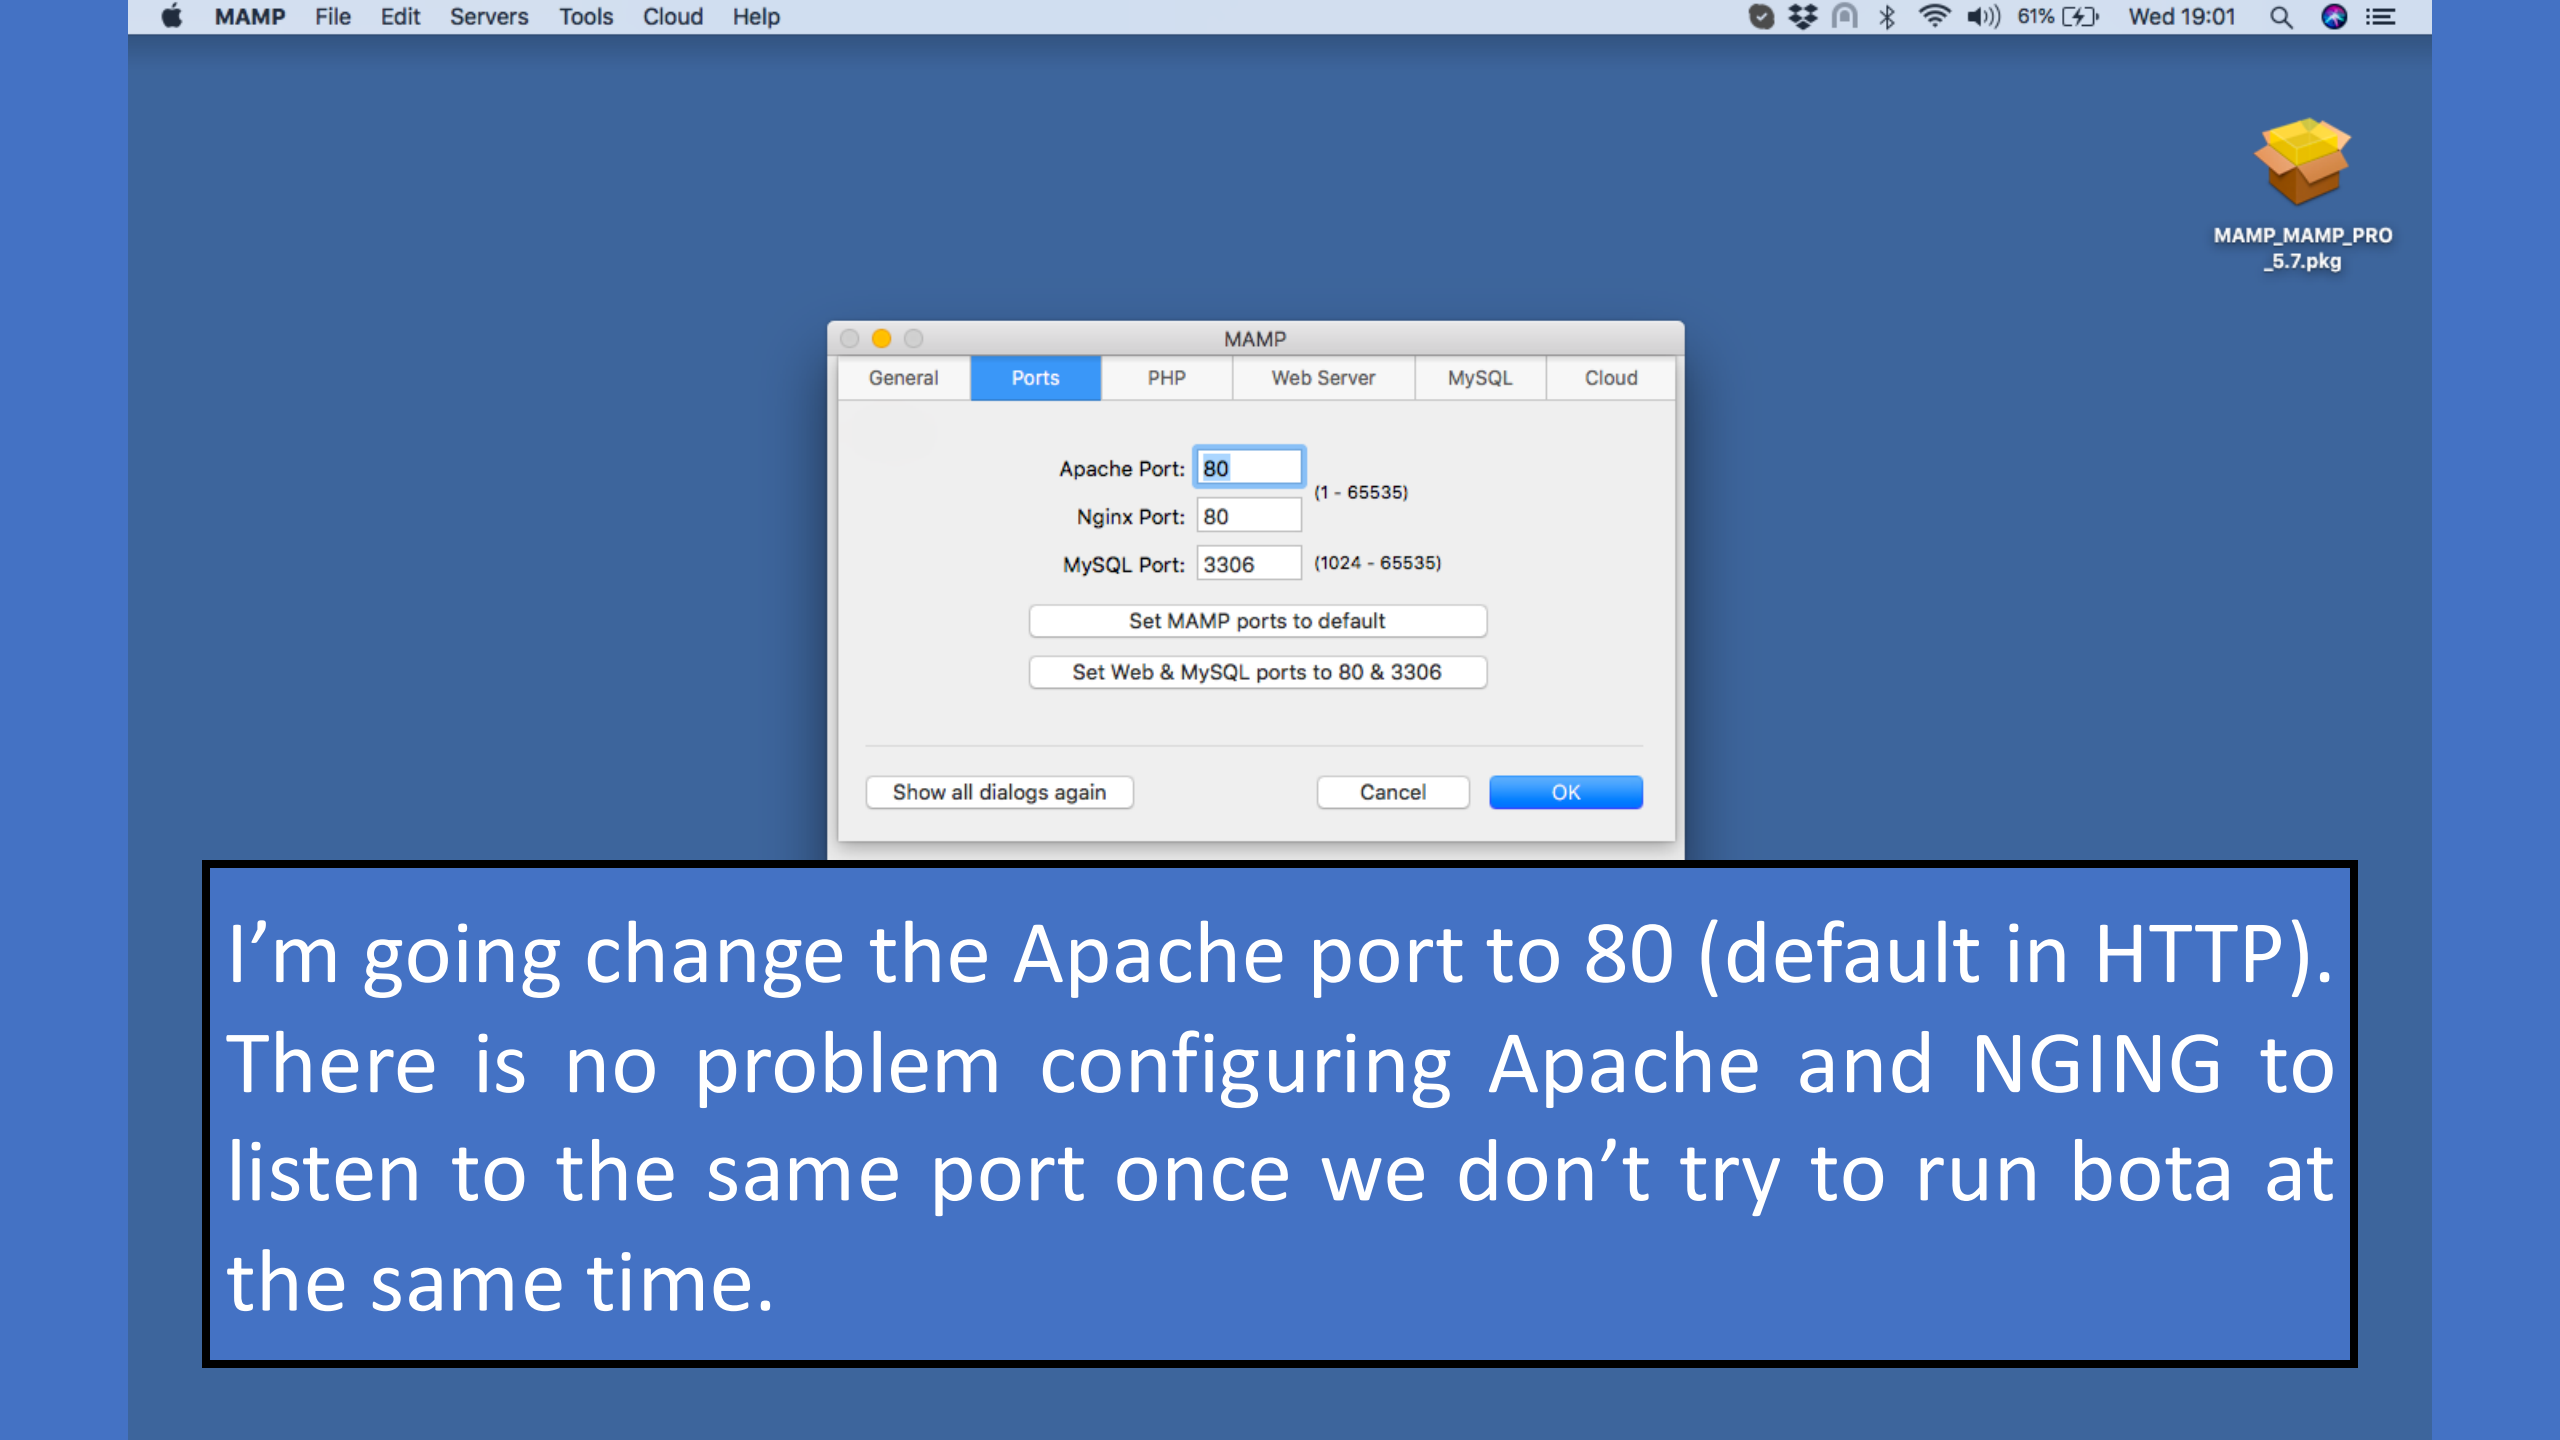

Let’s verify the default MAMP configuration for our servers. In Windows and GNU/Linux, this may be under File menu -> Settings

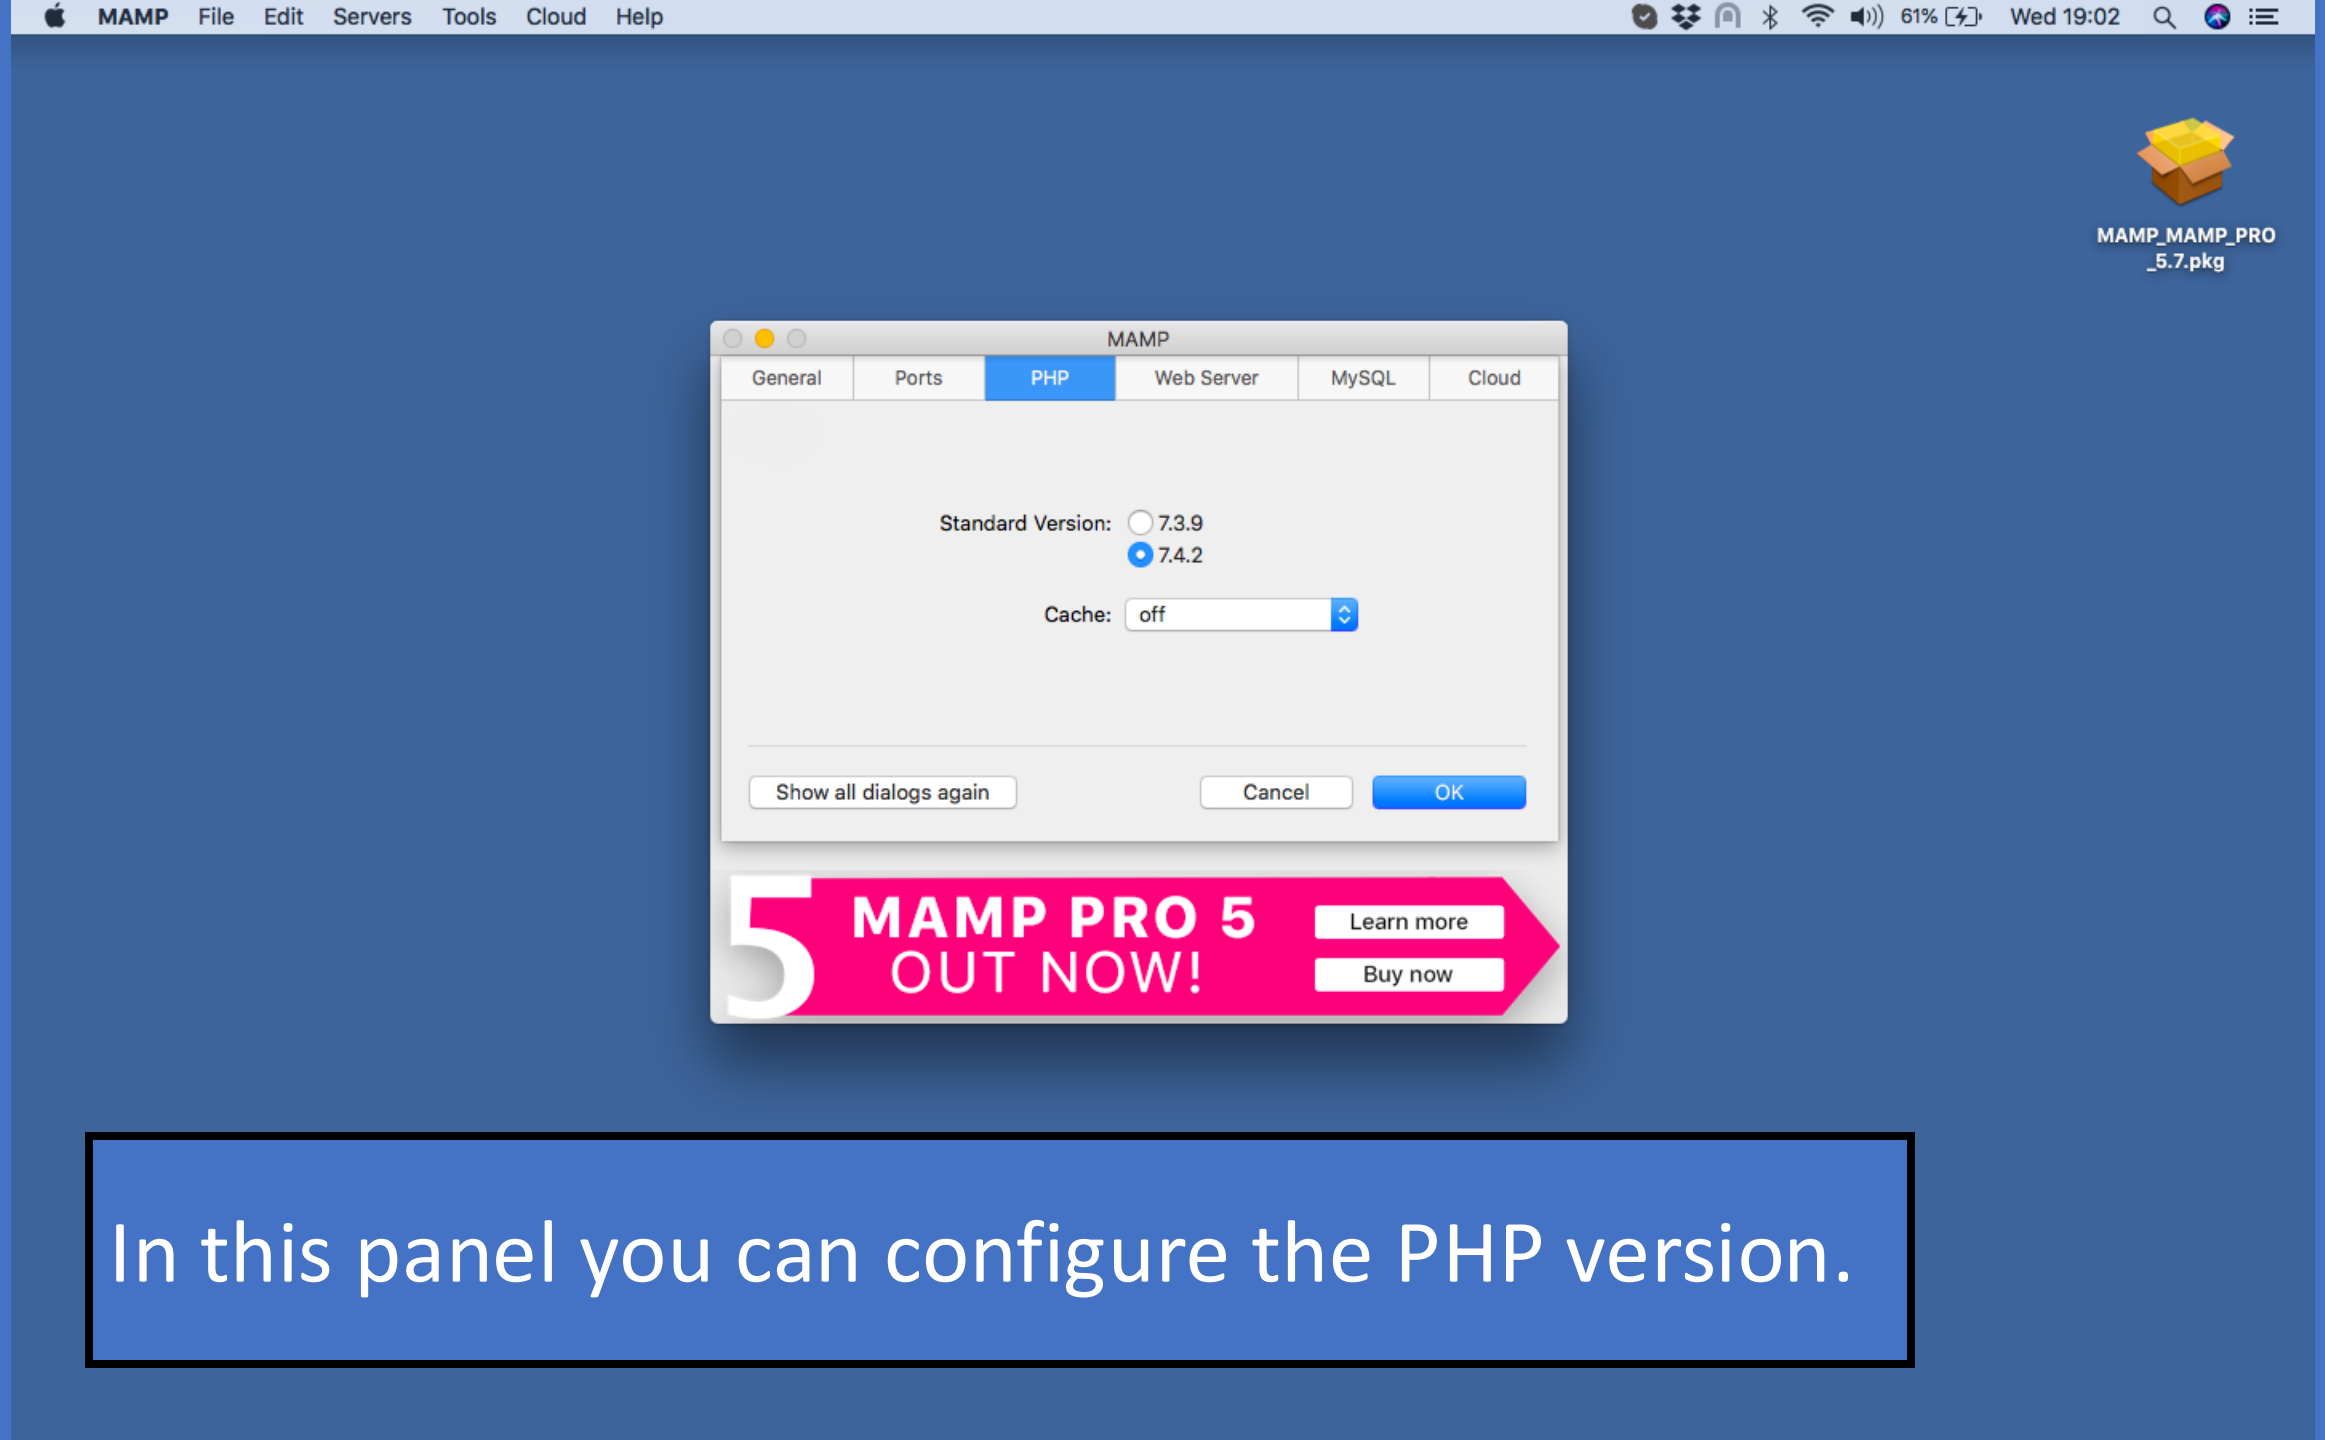

The General panel allows us, for example, to configure whether we want to automatically start/stop the server when starting/stopping MAMP

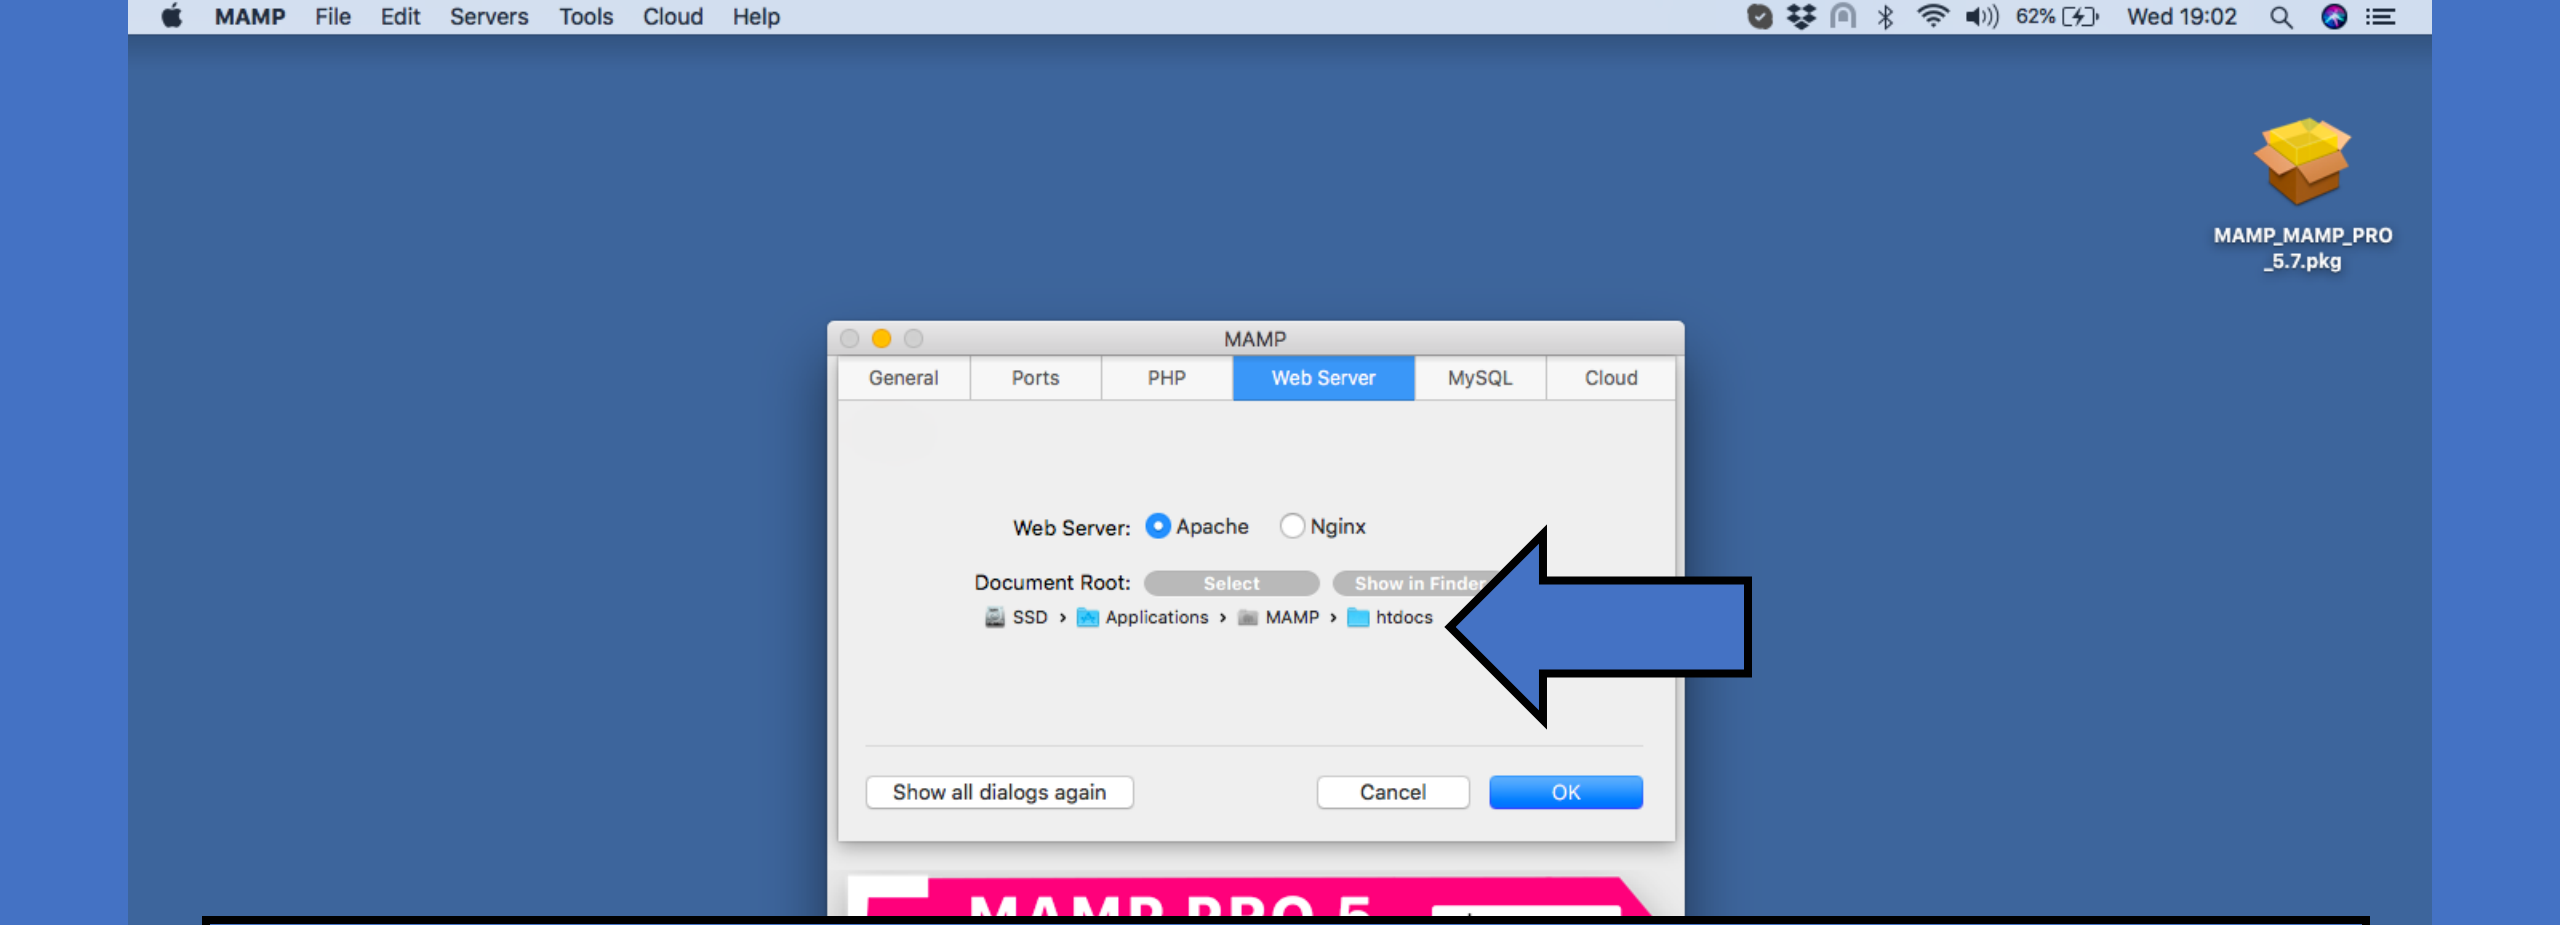

It is possible to have several web servers and database servers running in your local system. When two software processes try to use the same port at the same time, a confllict occurs. To avoid conflicts,you can configure the ports that Apache, NGINX, MySQL bundled with MAPM listen.

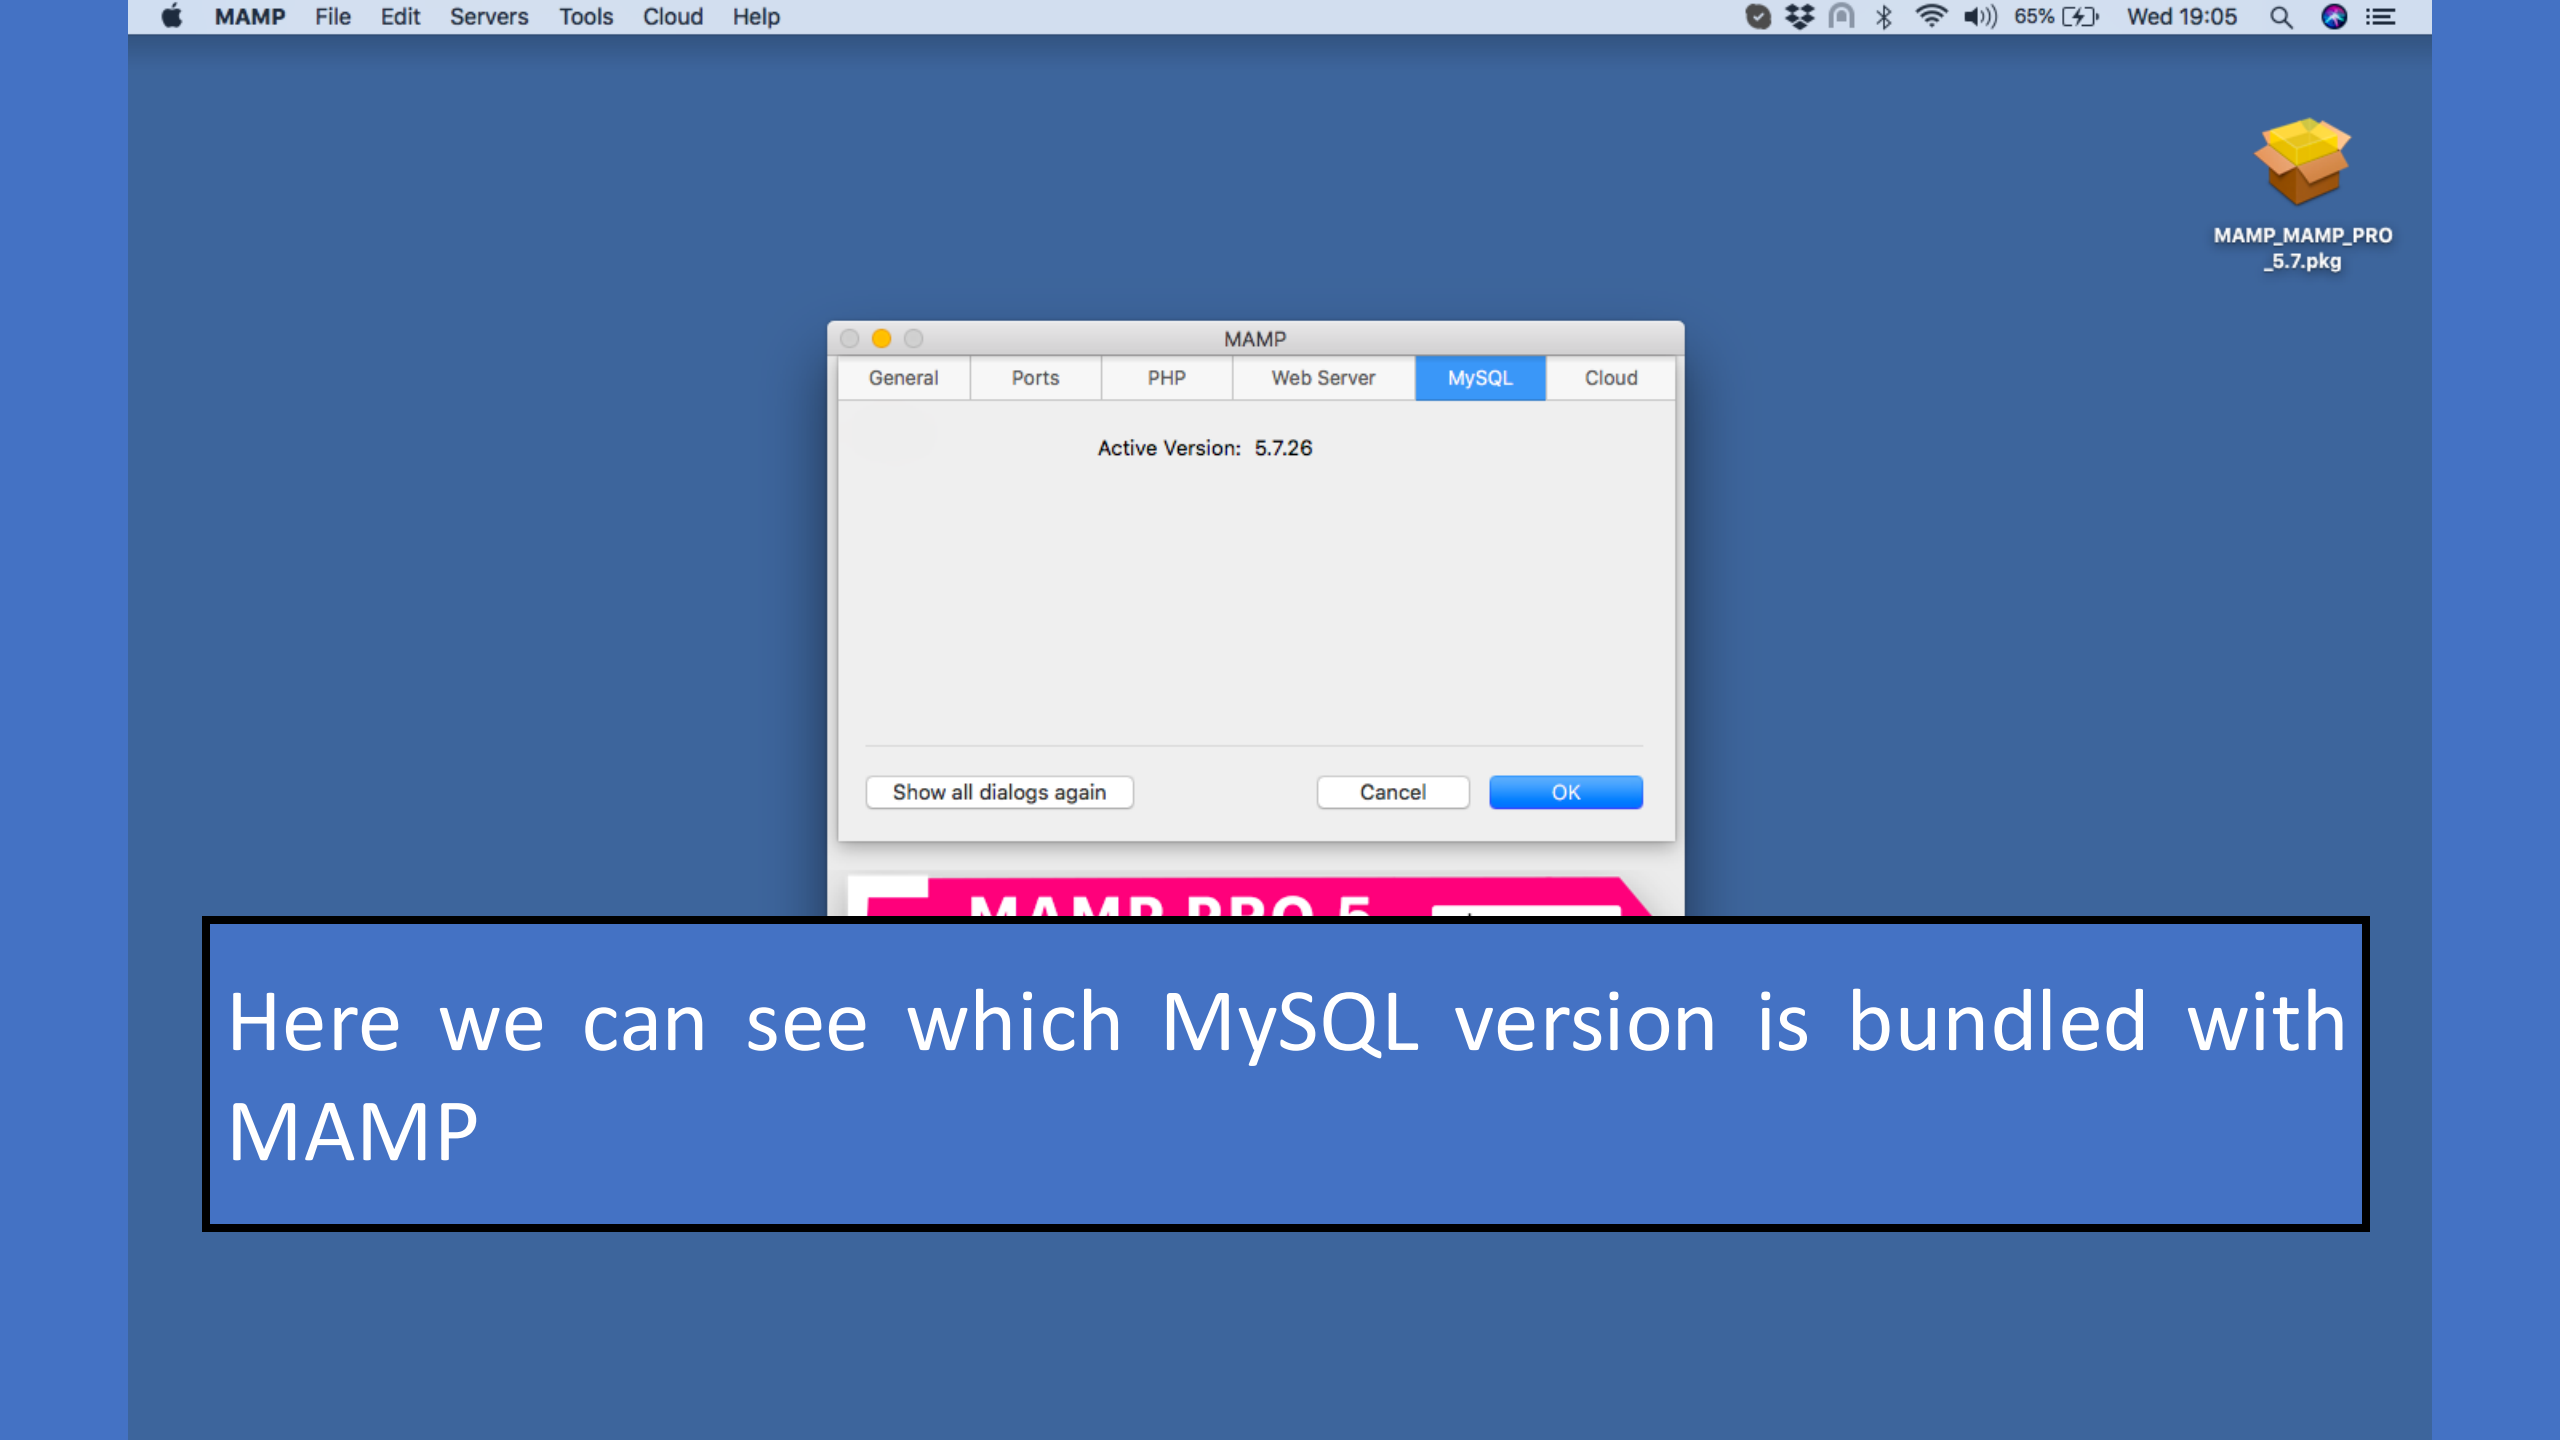

I’m going change the Apache port to 80 (default in HTTP). There is no problem configuring Apache and NGING to listen to the same port once we don’t try to run bota at the same time.

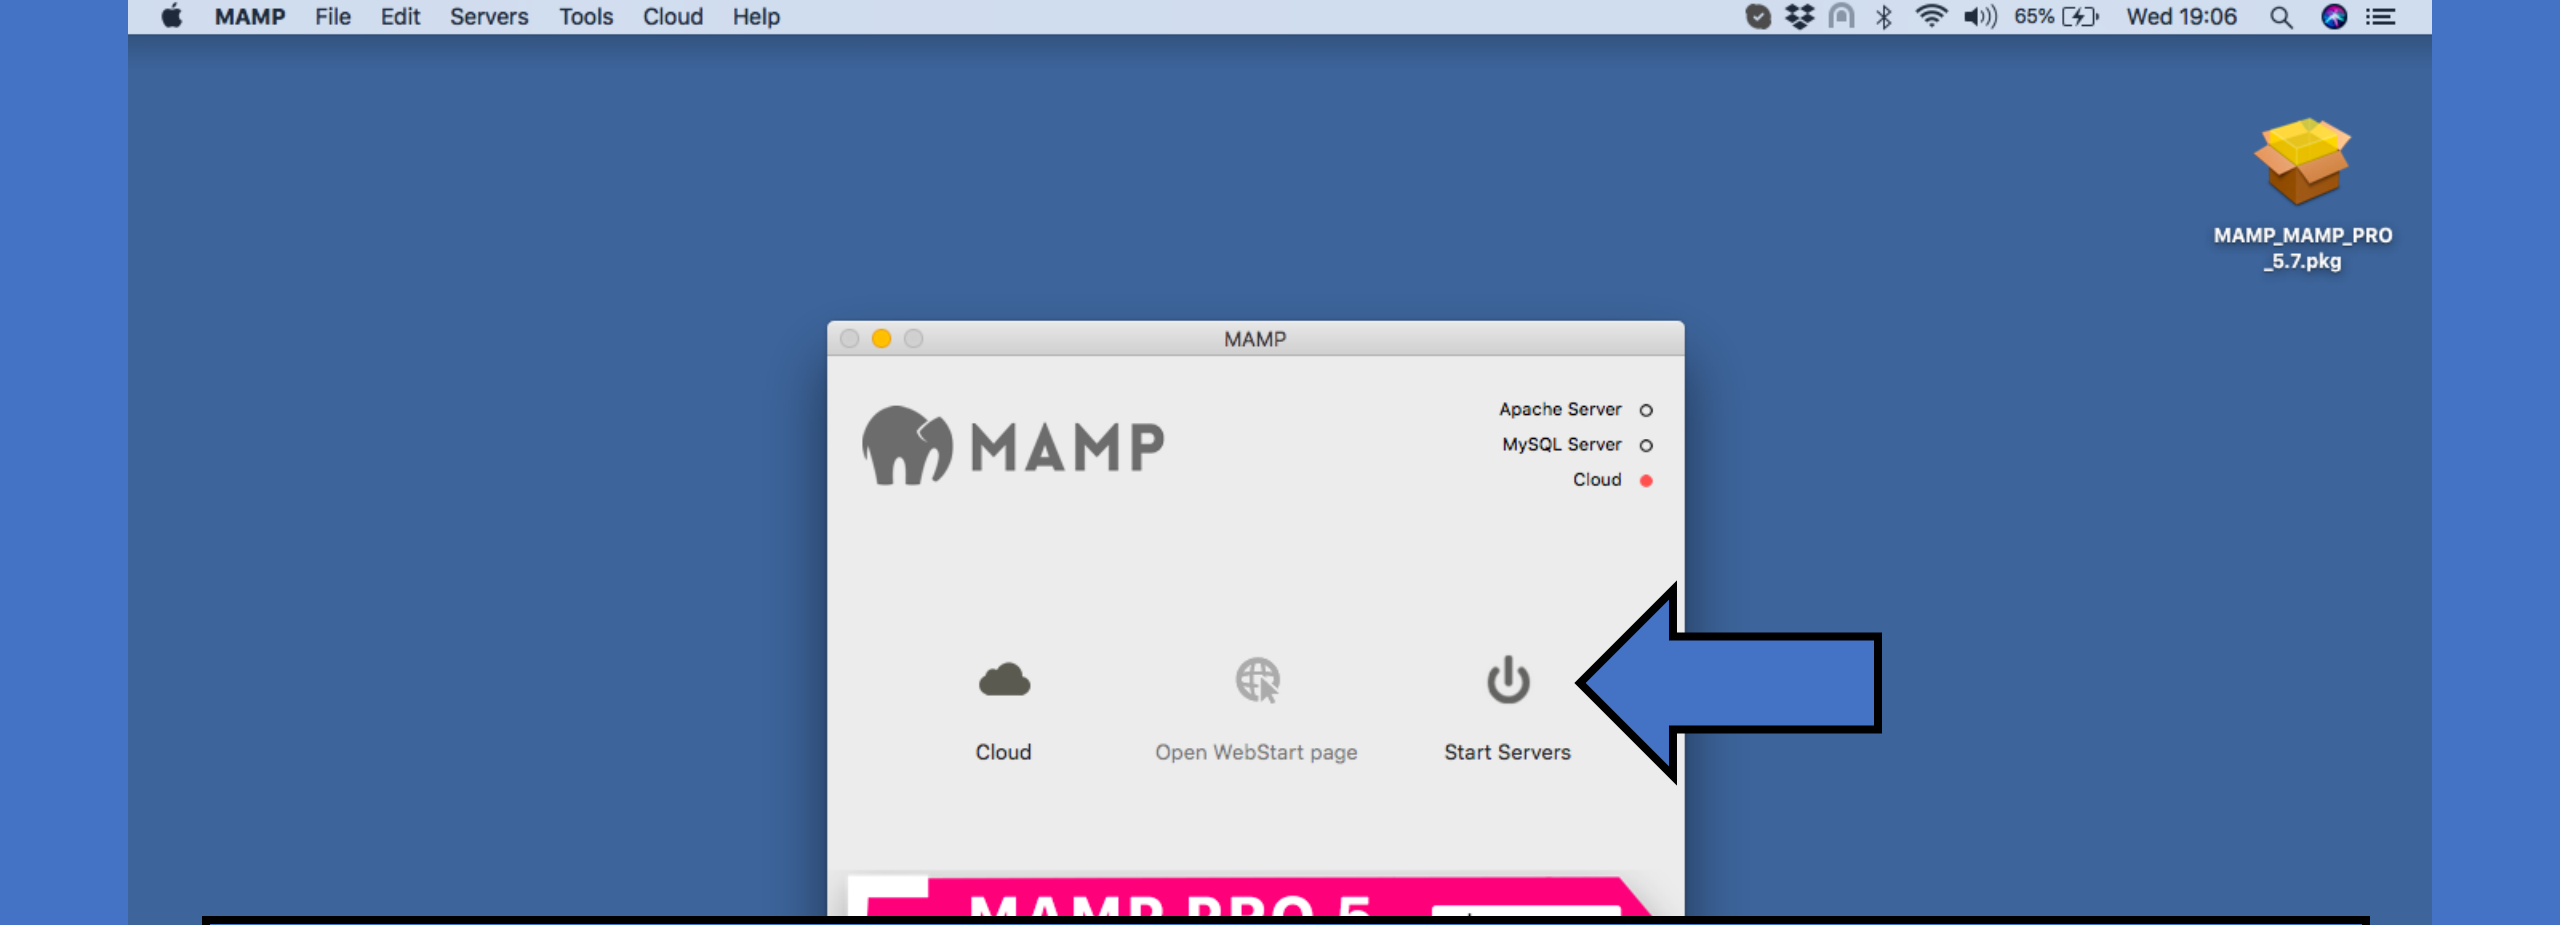

In this panel you can configure the PHP version.

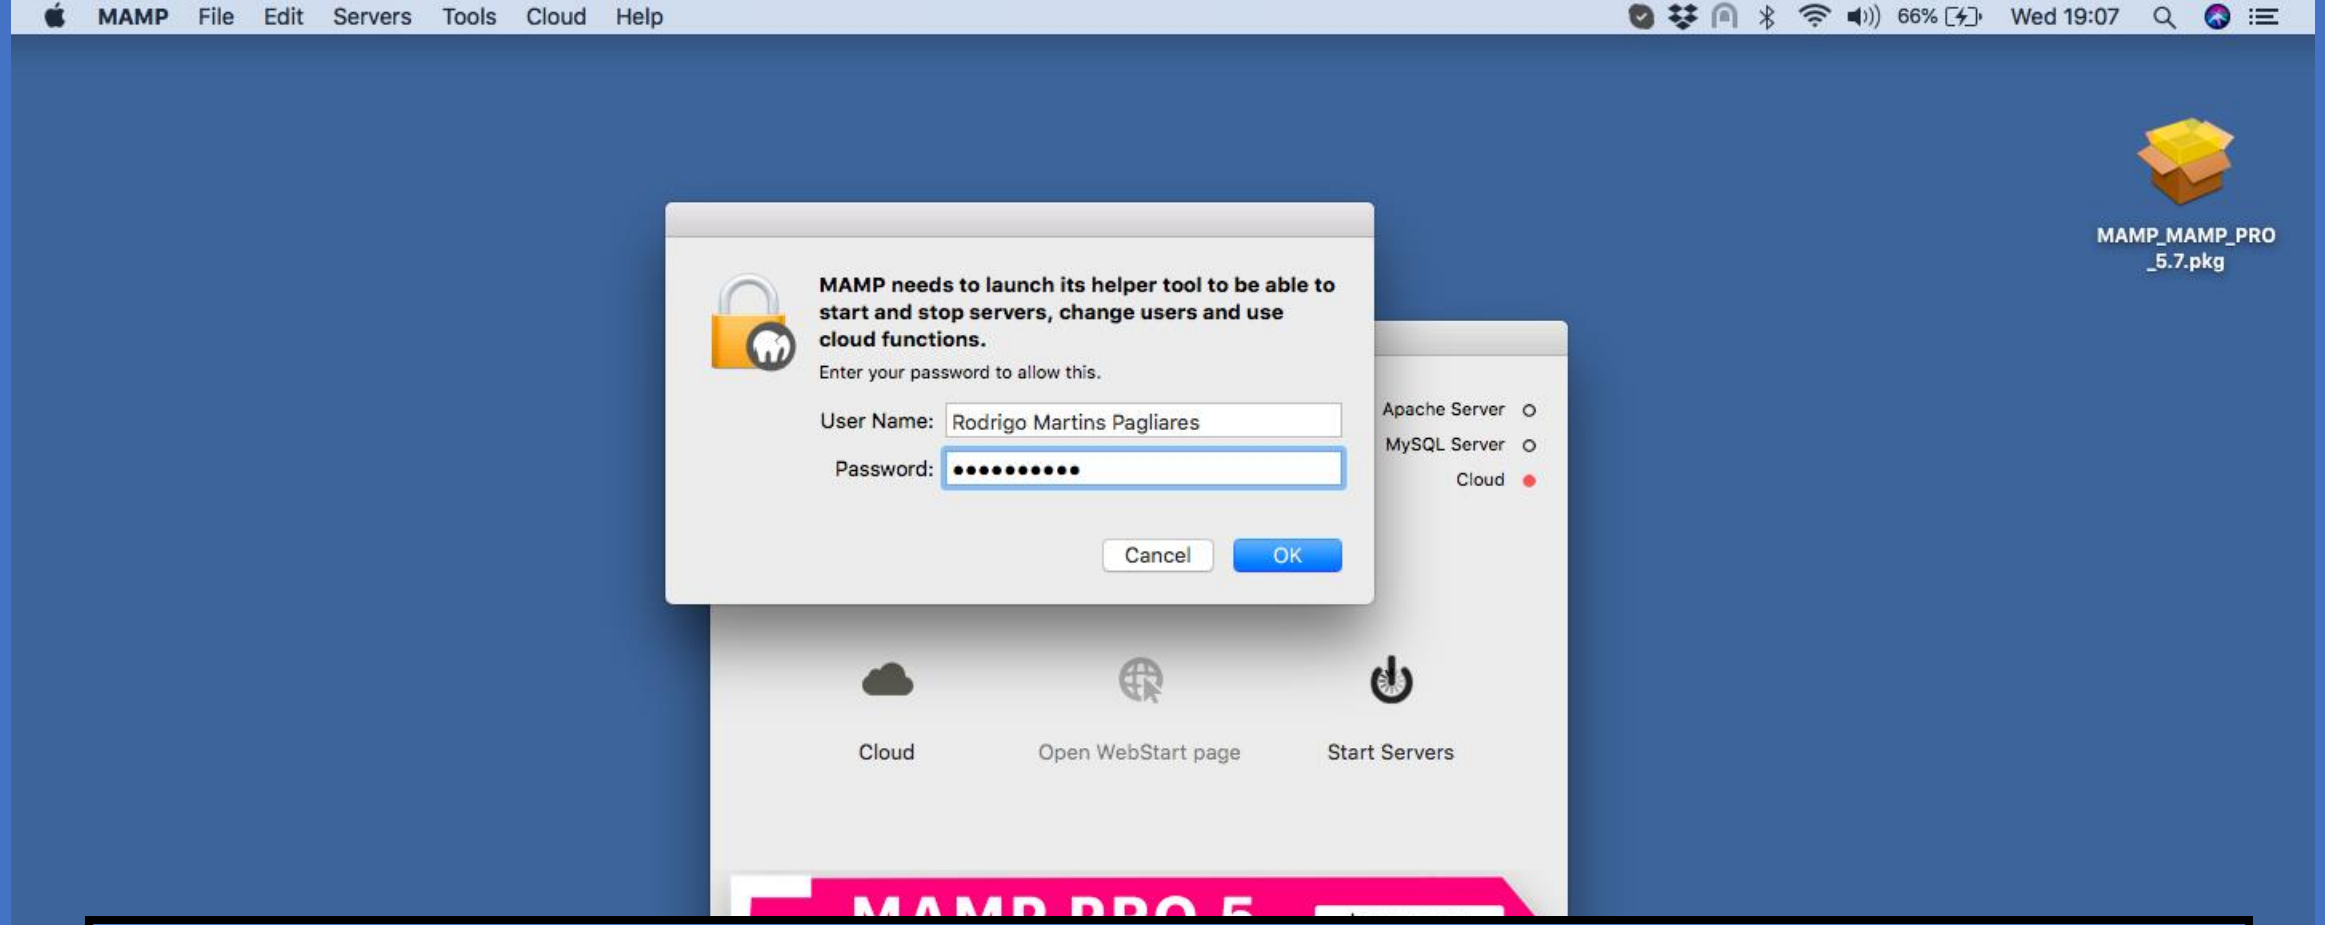

I'm going to use Apache in these slides. Notice that `htdocs` is de folder witin MAMP to store our websites, including websites powered by WordPress.
