Log In
Installation
With our famous 5-minute installation, setting up WordPress for the first time is simple. We've created a handy guide to see you through the installation process.
Release notifications
Want to get notified about WordPress releases? Join the WordPress Announcements mailing list and we will send a friendly message whenever there is a new stable release.
Requirements
We recommend servers running version 7.4 or greater of PHP and MySQL version 5.6 OR MariaDB
More resources
All Releases
Beta/Nightly Versions
There are several ways to install WordPress in a local environment. One of the easiest ways is with MAMP.
WordPress Hosting
Choosing a hosting provider can be difficult, so we have selected a few of the best to get you started.

MAMP_MAMP_PRO_5.7.pkg
wordpress
I downloaded and extracted WordPress in my desktop.

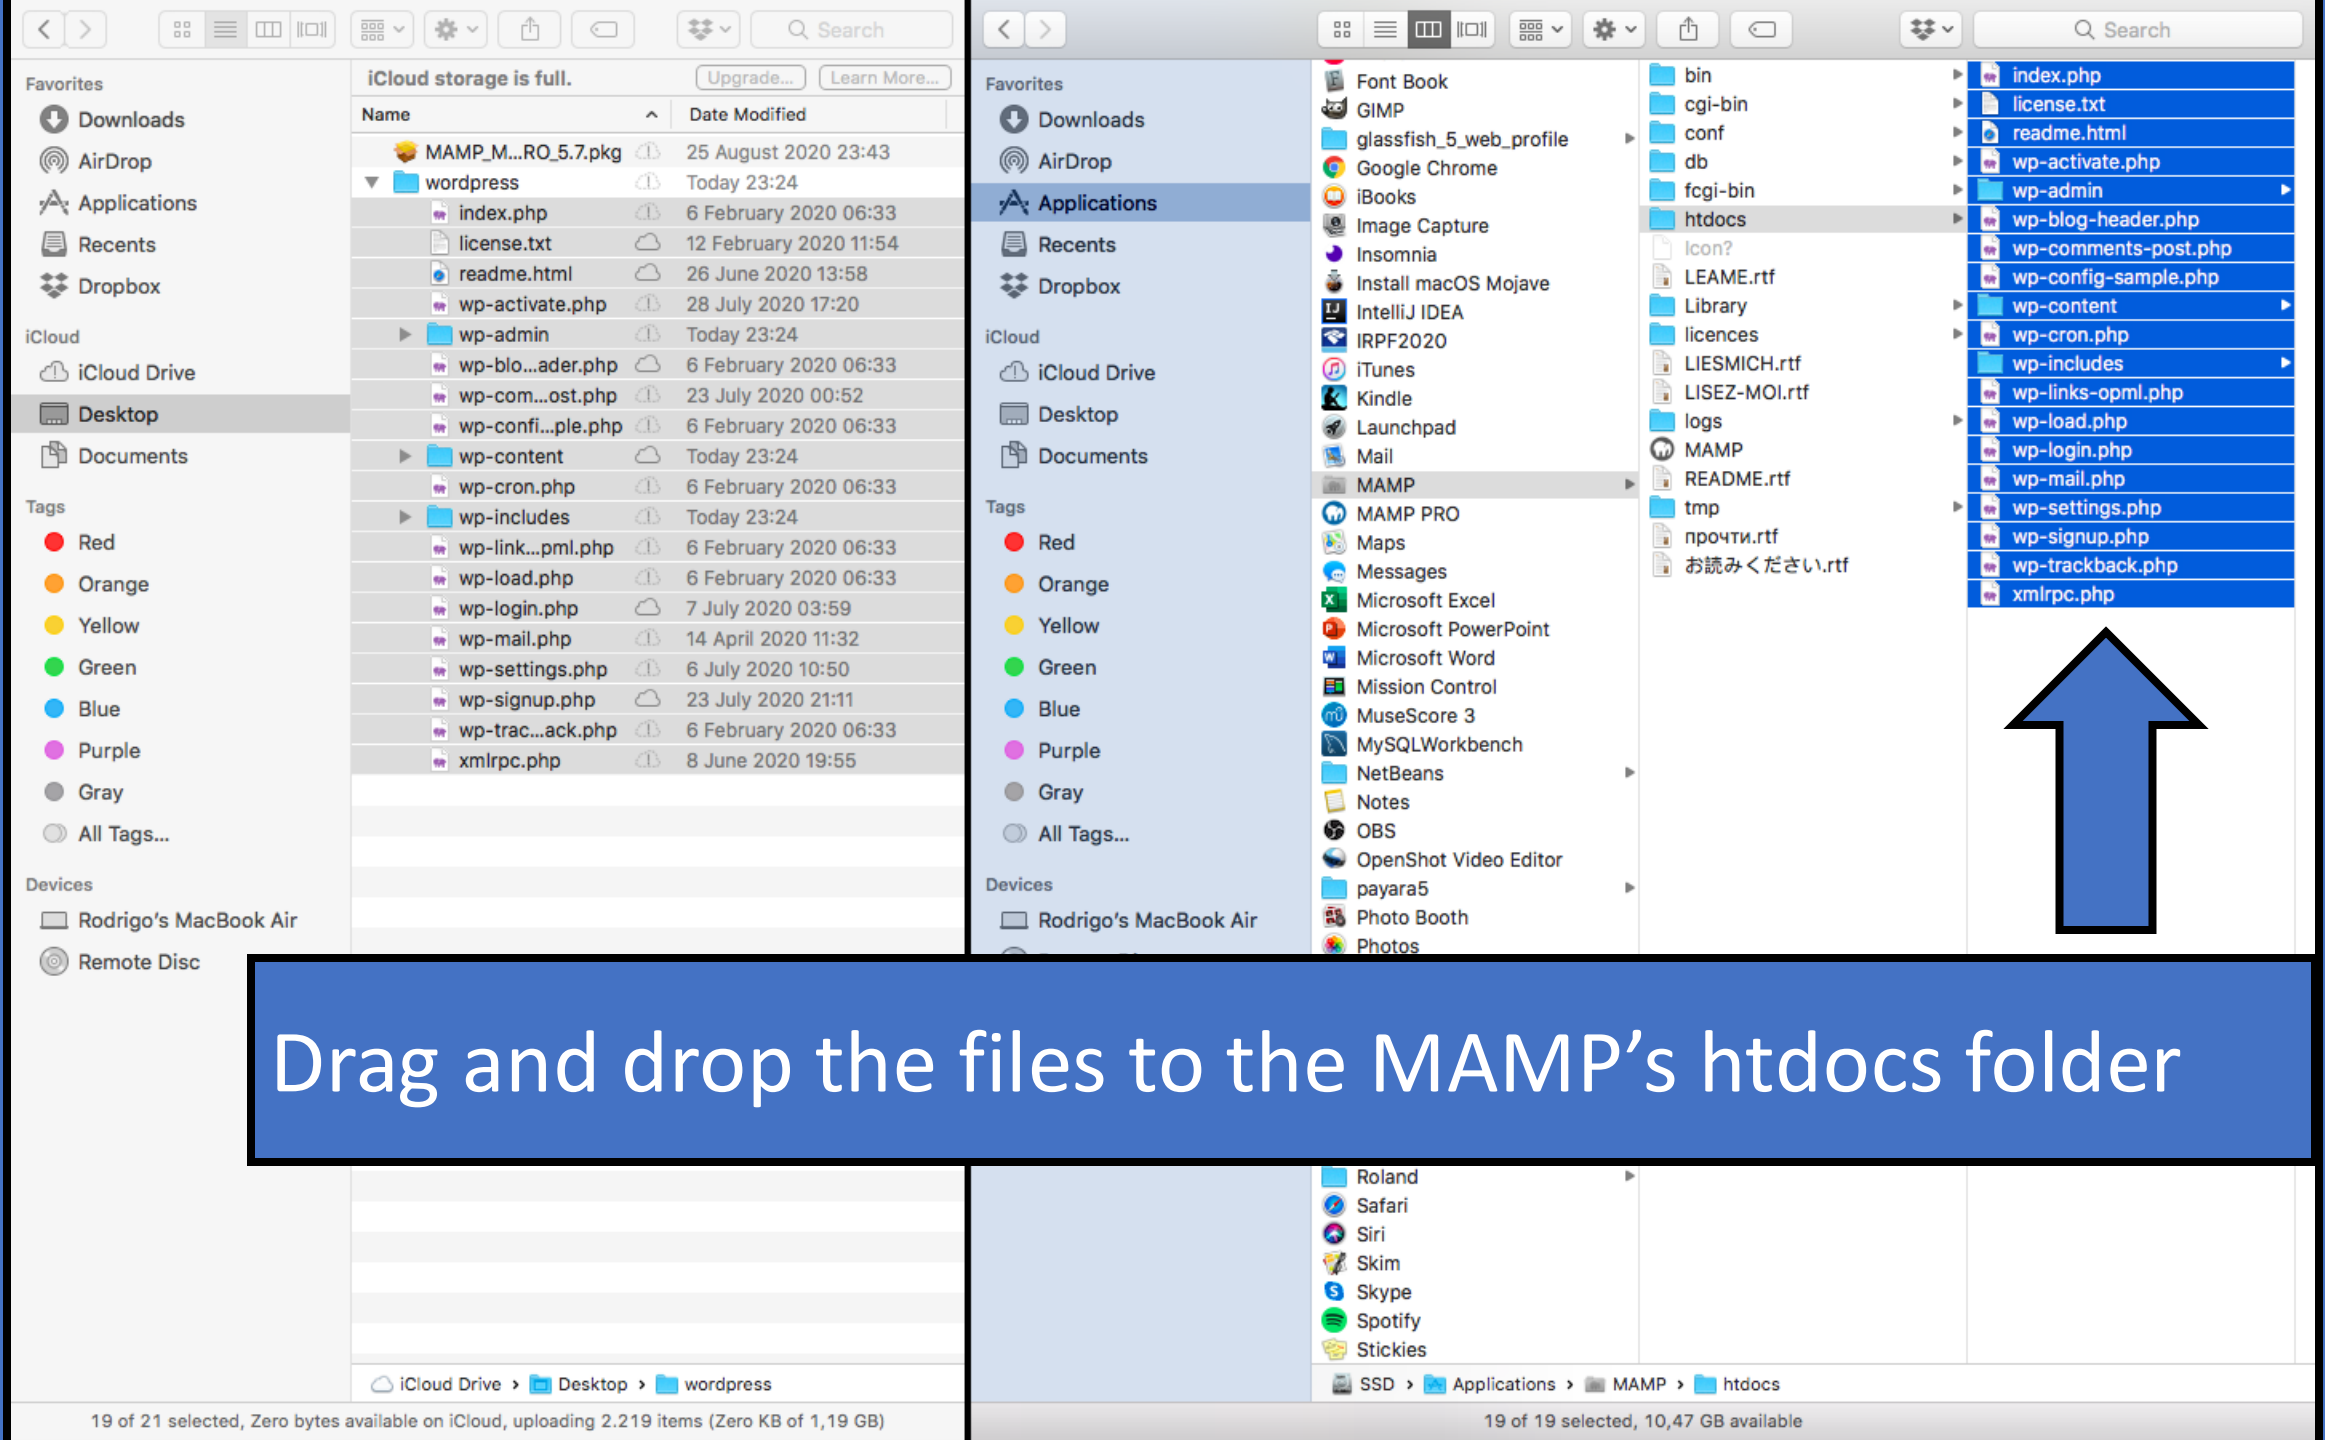

As you can see, Wordpress is a web application developed in PHP.

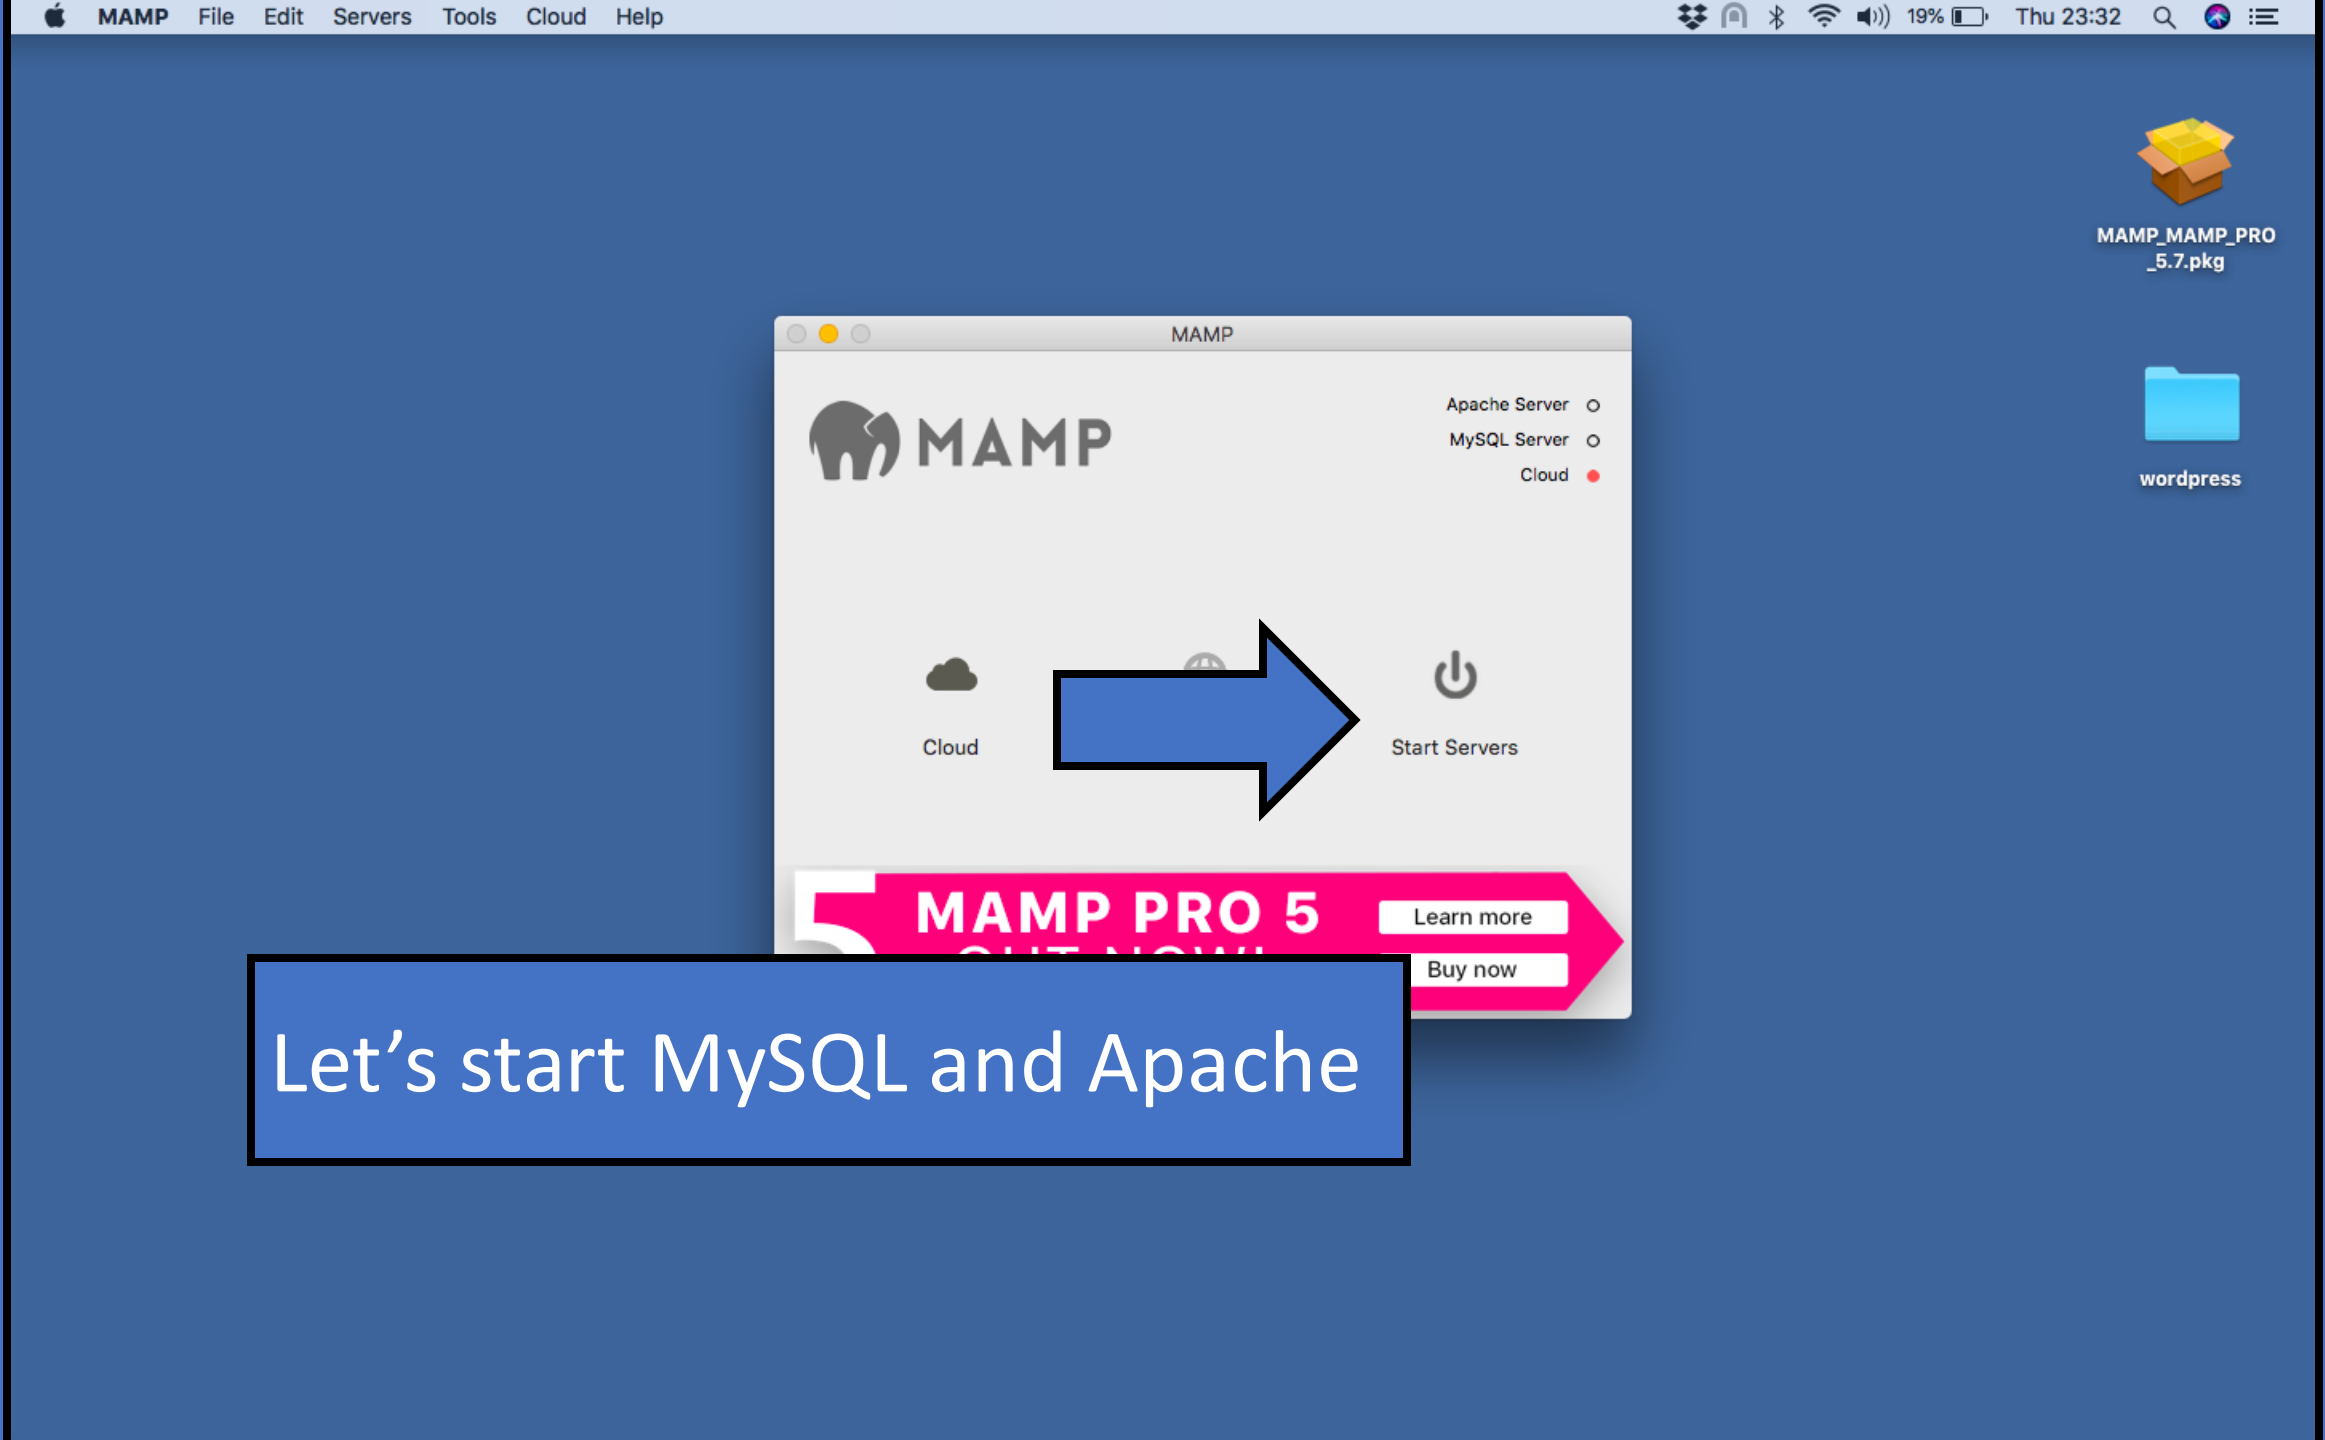

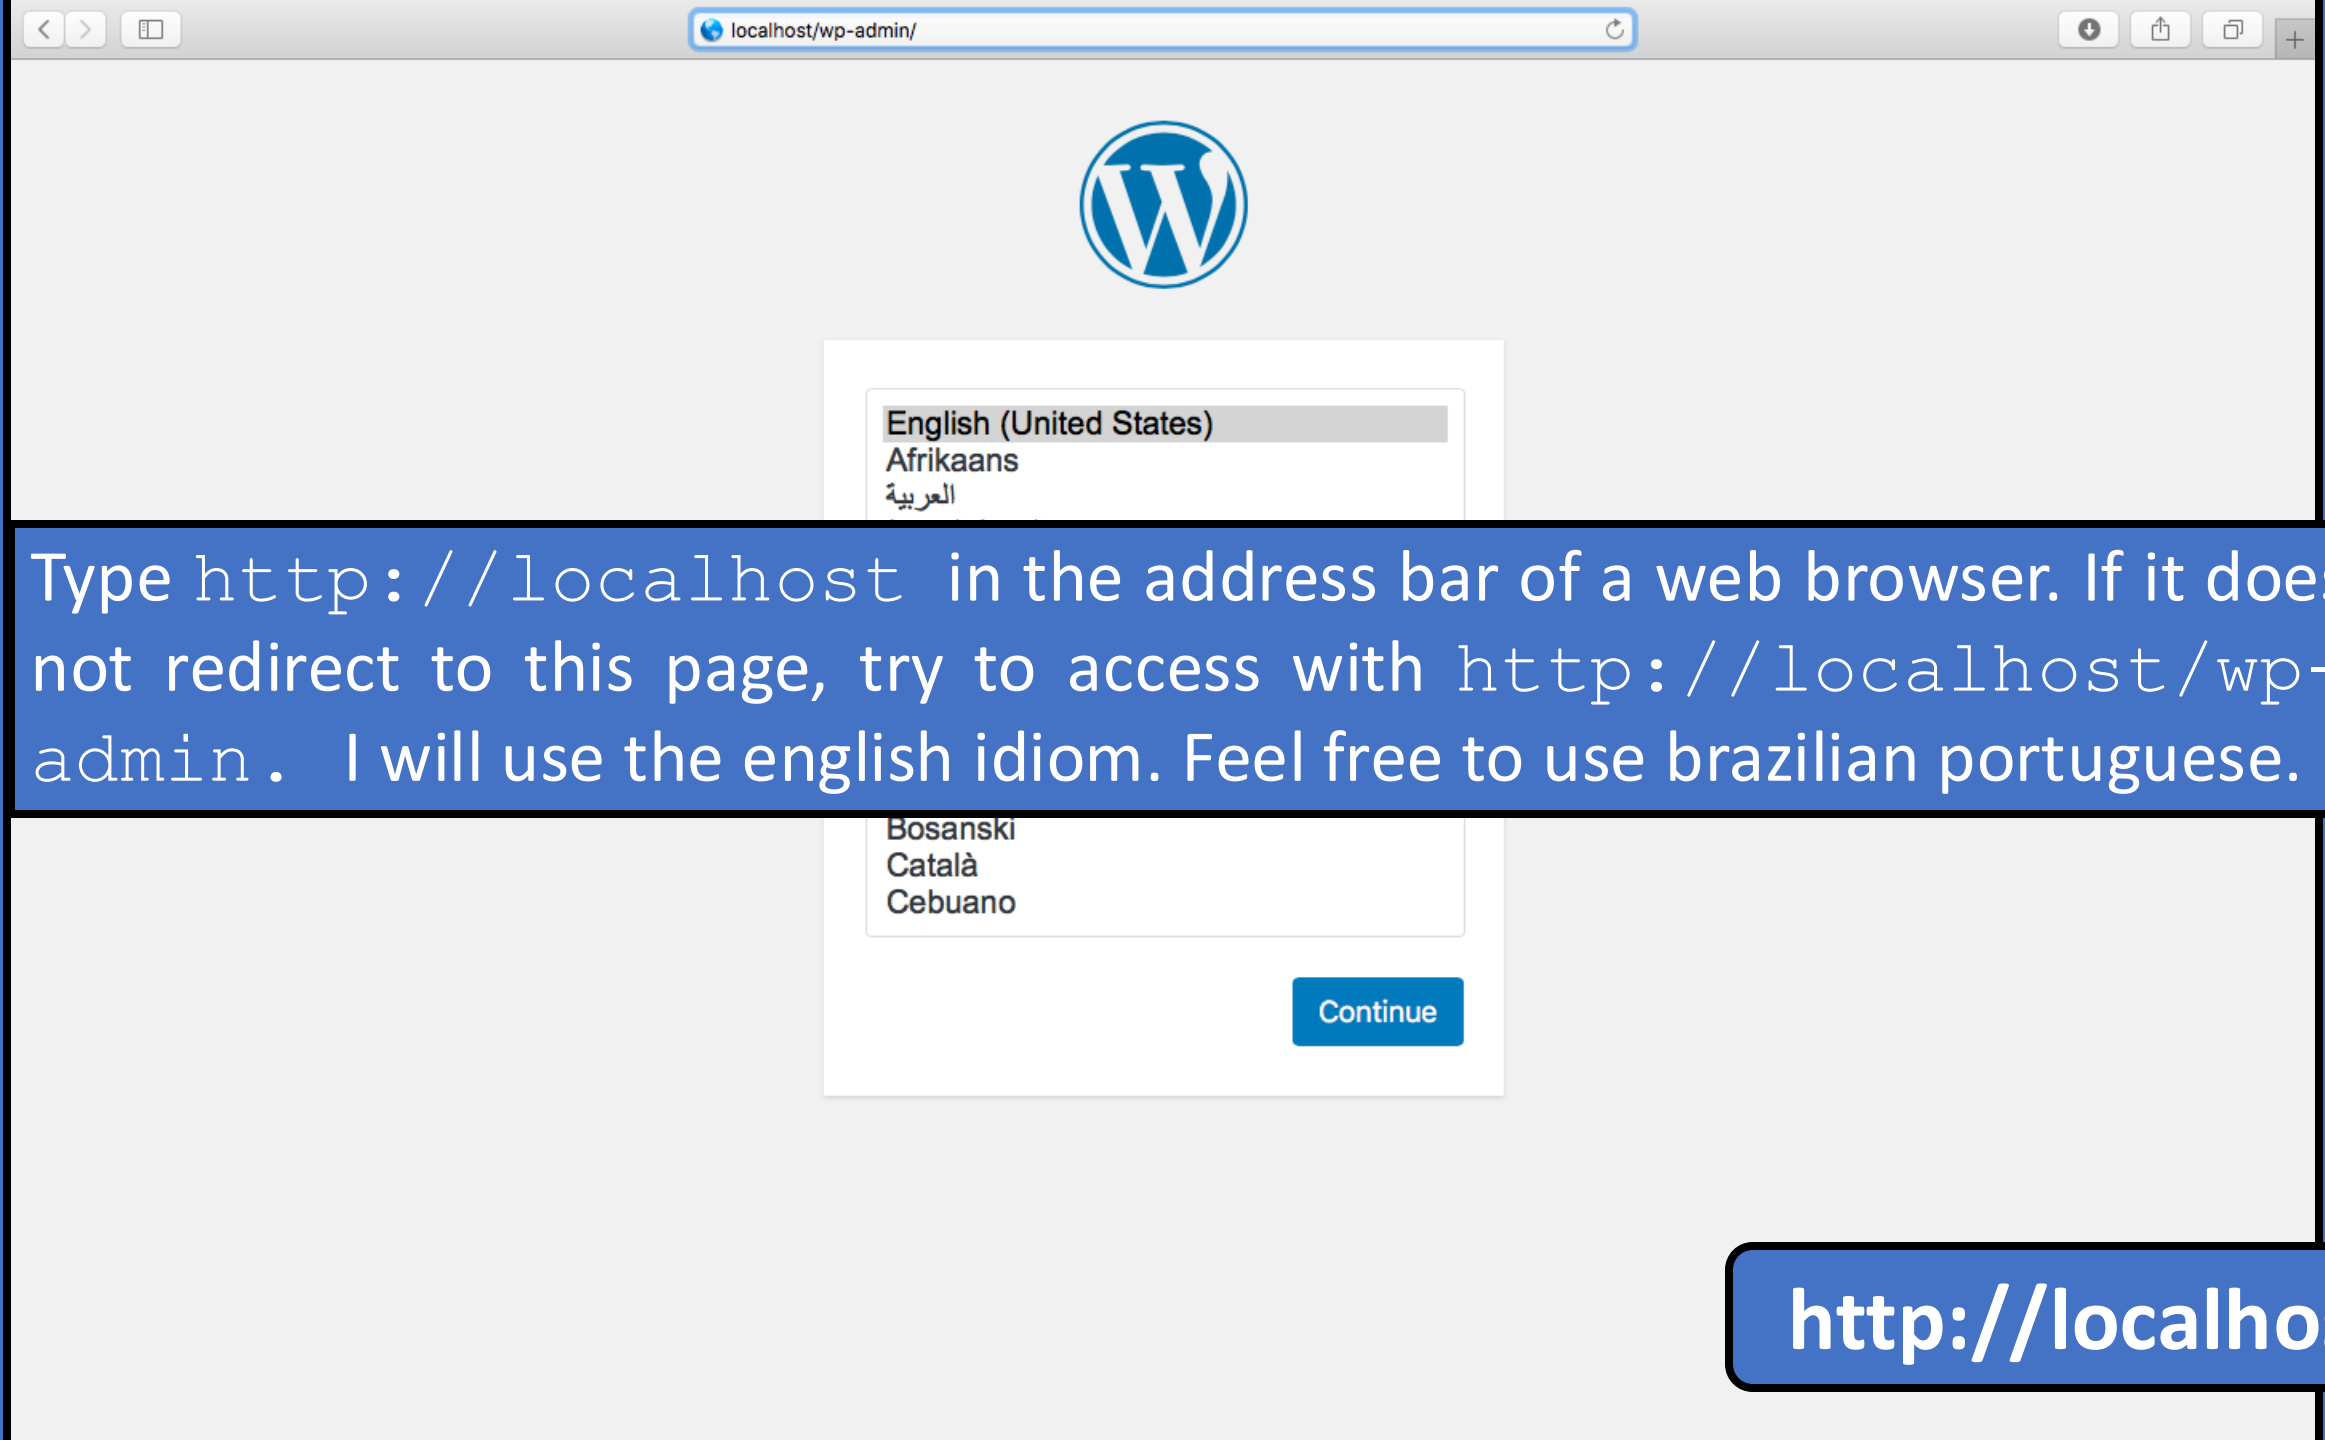

All we need to do is copy the contents of the WordPress folder into the folder MAMP user for storing websites served with Apache.

localhost/wp-admin/setup-config.php
Welcome to WordPress. Before getting started, we need some information on the database. You will need to know the following items before proceeding.
1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one
We're going to use this information to create a wp-
creation doesn't work, don't worry. All this does
You may also simply open wp-config-sampl
as wp-config.php. Need more help? We got it.
In all likelihood, these items were supplied to you by your Web Host. If you don't have this information, then you will need to contact them before you can continue. If you're all ready...
Let's go!
These are the 5 basic information you need to know to configure WordPress.

Welcome to WordPress. Before getting started, we need some information on the database. You will need to know the following items before proceeding.

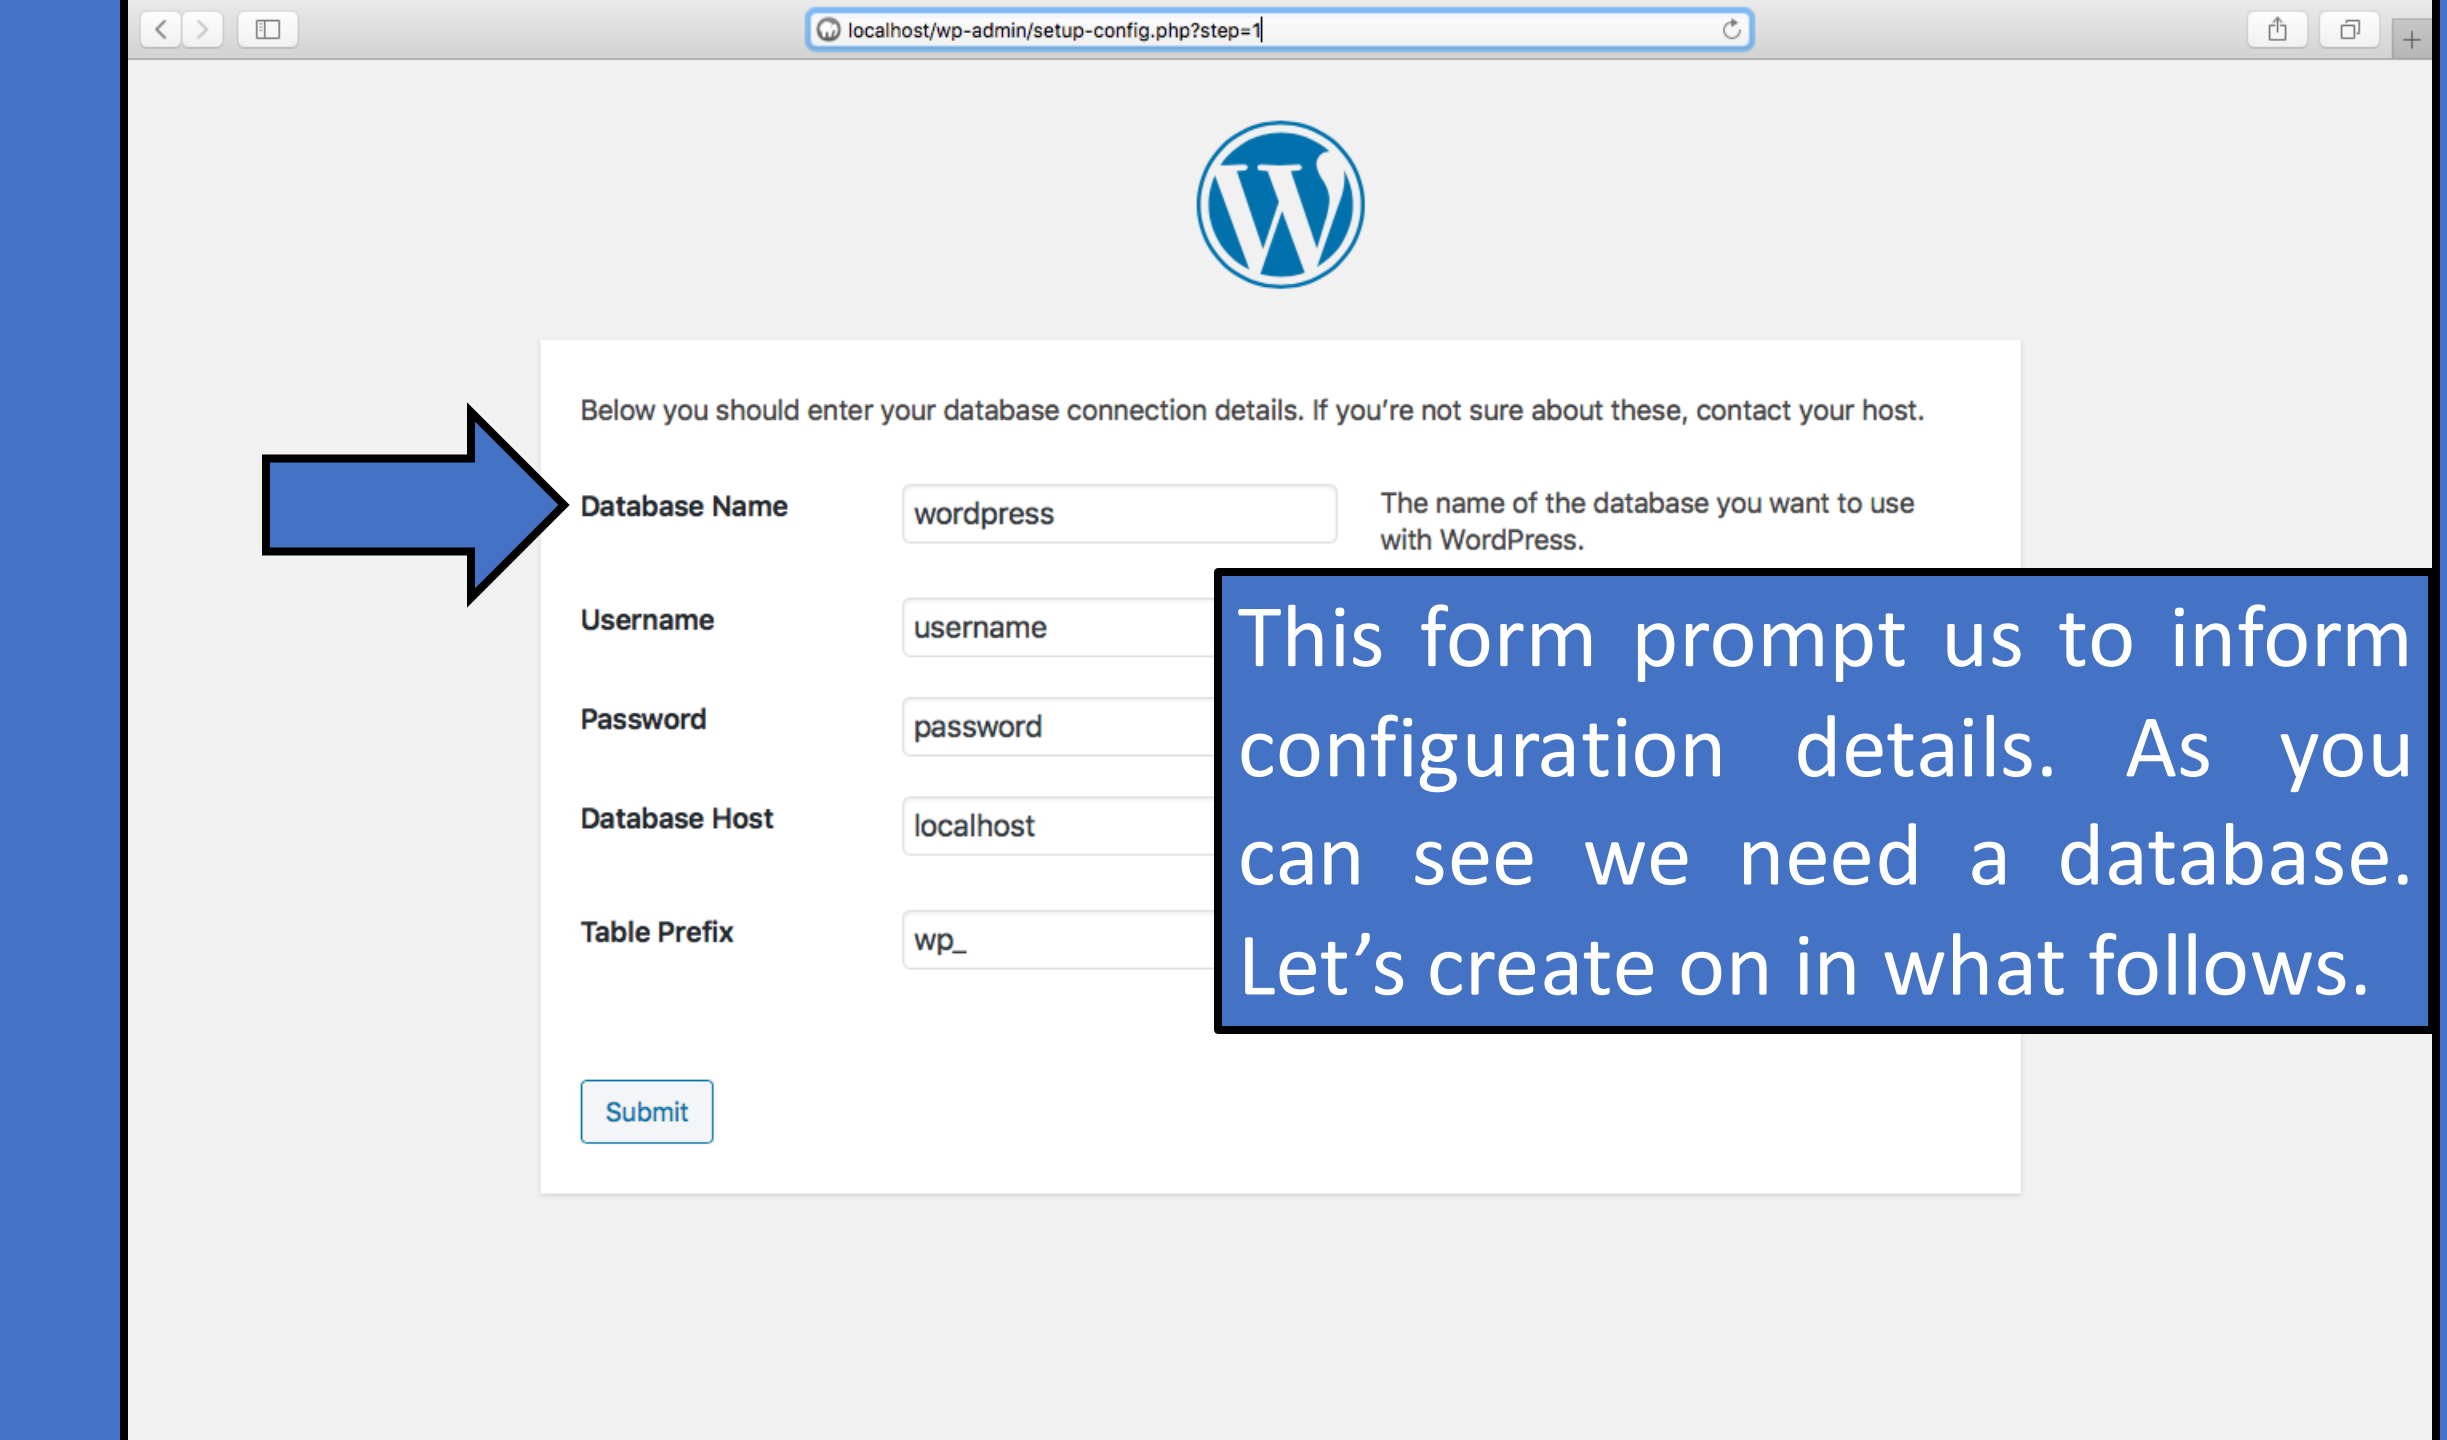

1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one WordPress in a single database)

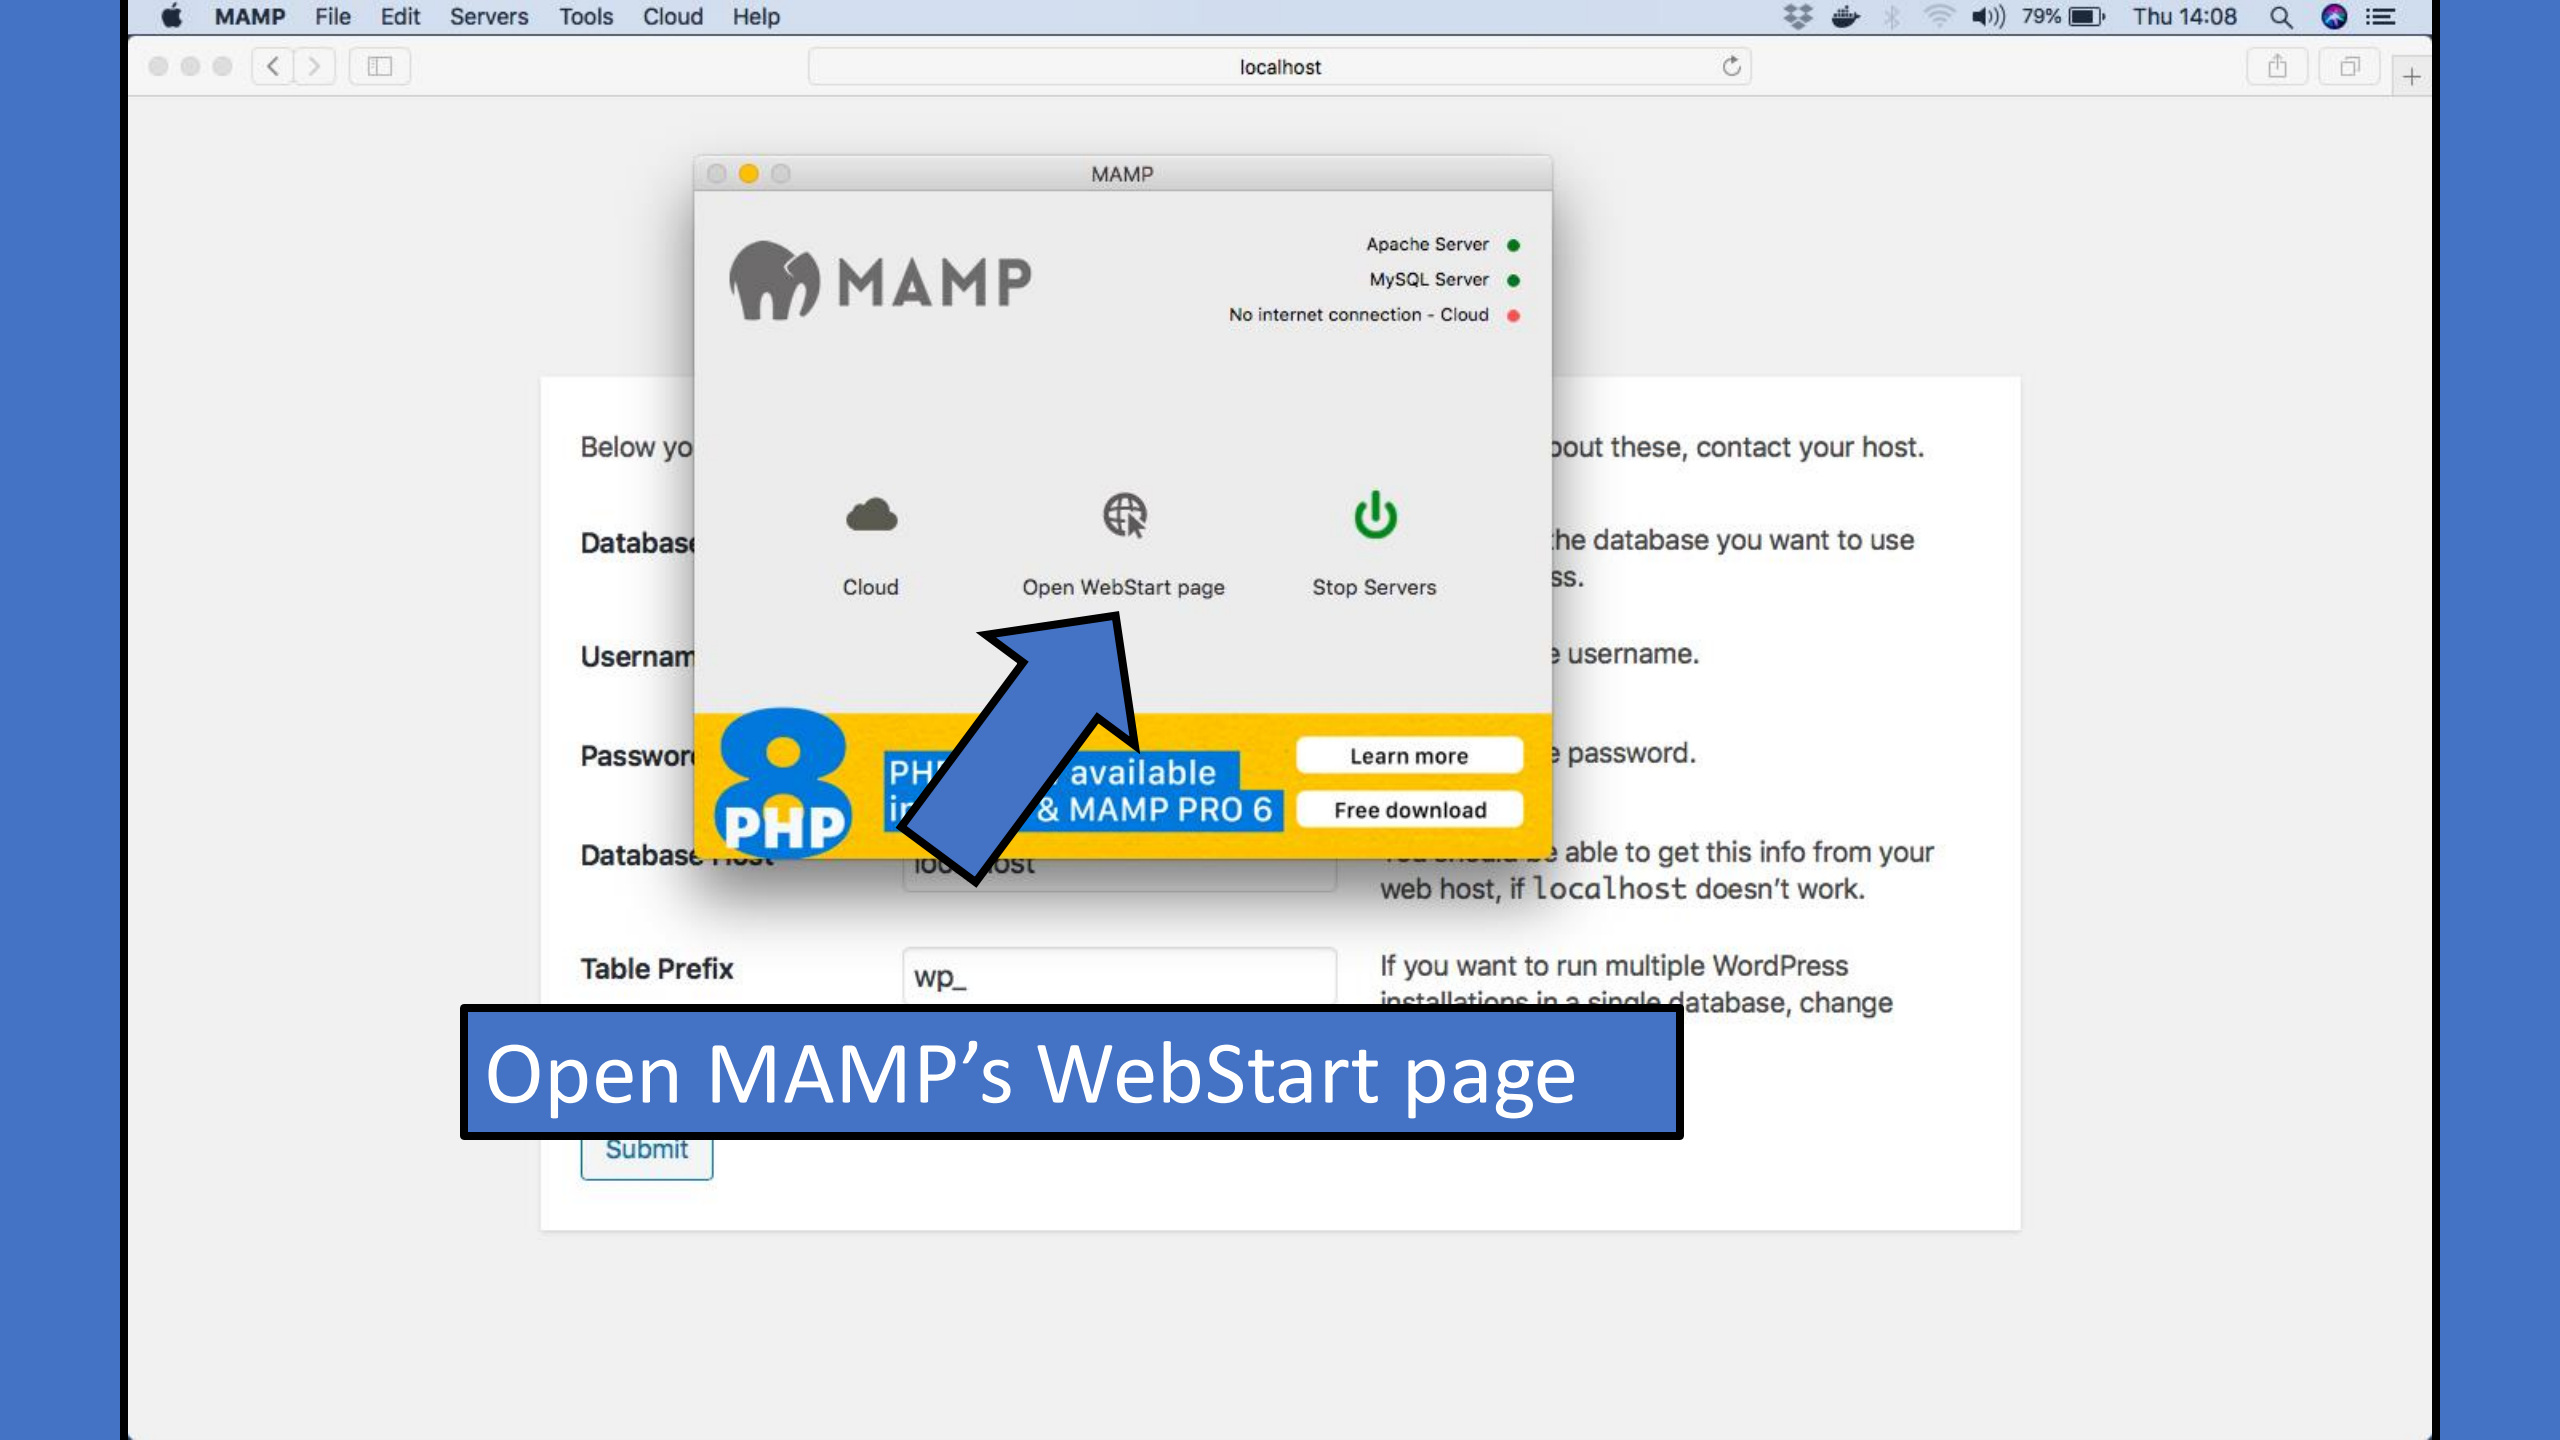

Click Let's go !

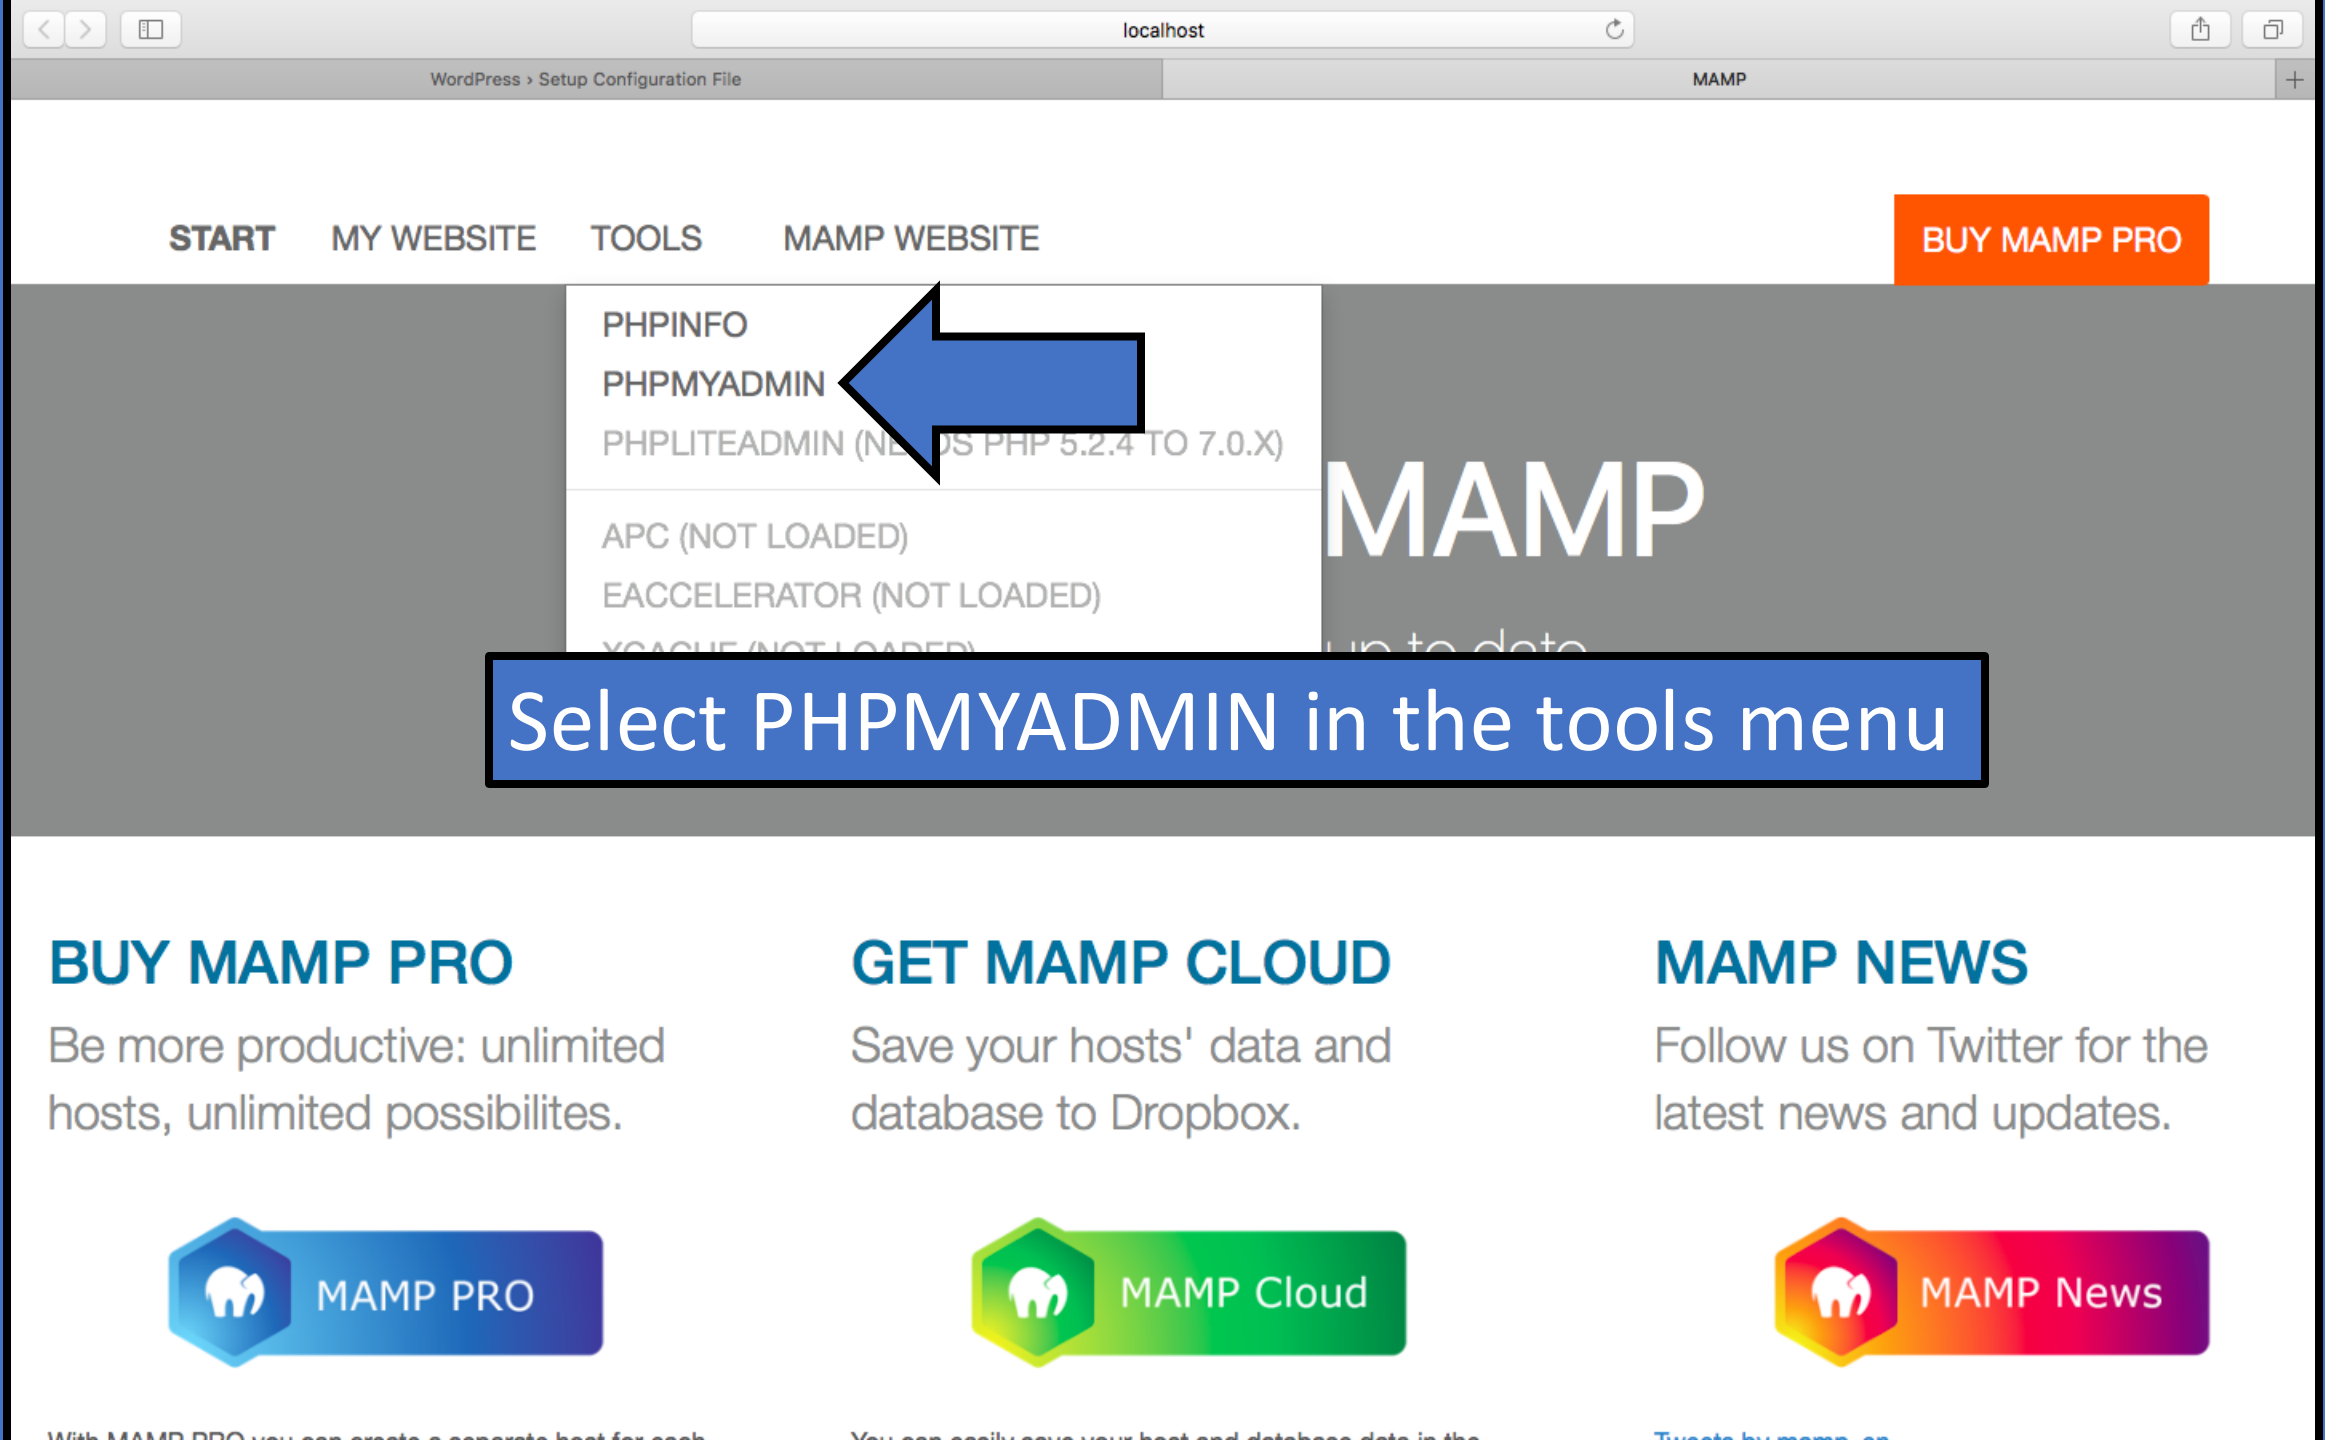

We're going to use this information to create a `wp-config.php` file. **If for any reason this automatic file creation doesn't work, don't worry. All this does is fill in the database information to a configuration file. You may also simply open `wp-config-sample.php` in a text editor, fill in your information, and save it as `wp-config.php`.** Need more help? We got it.

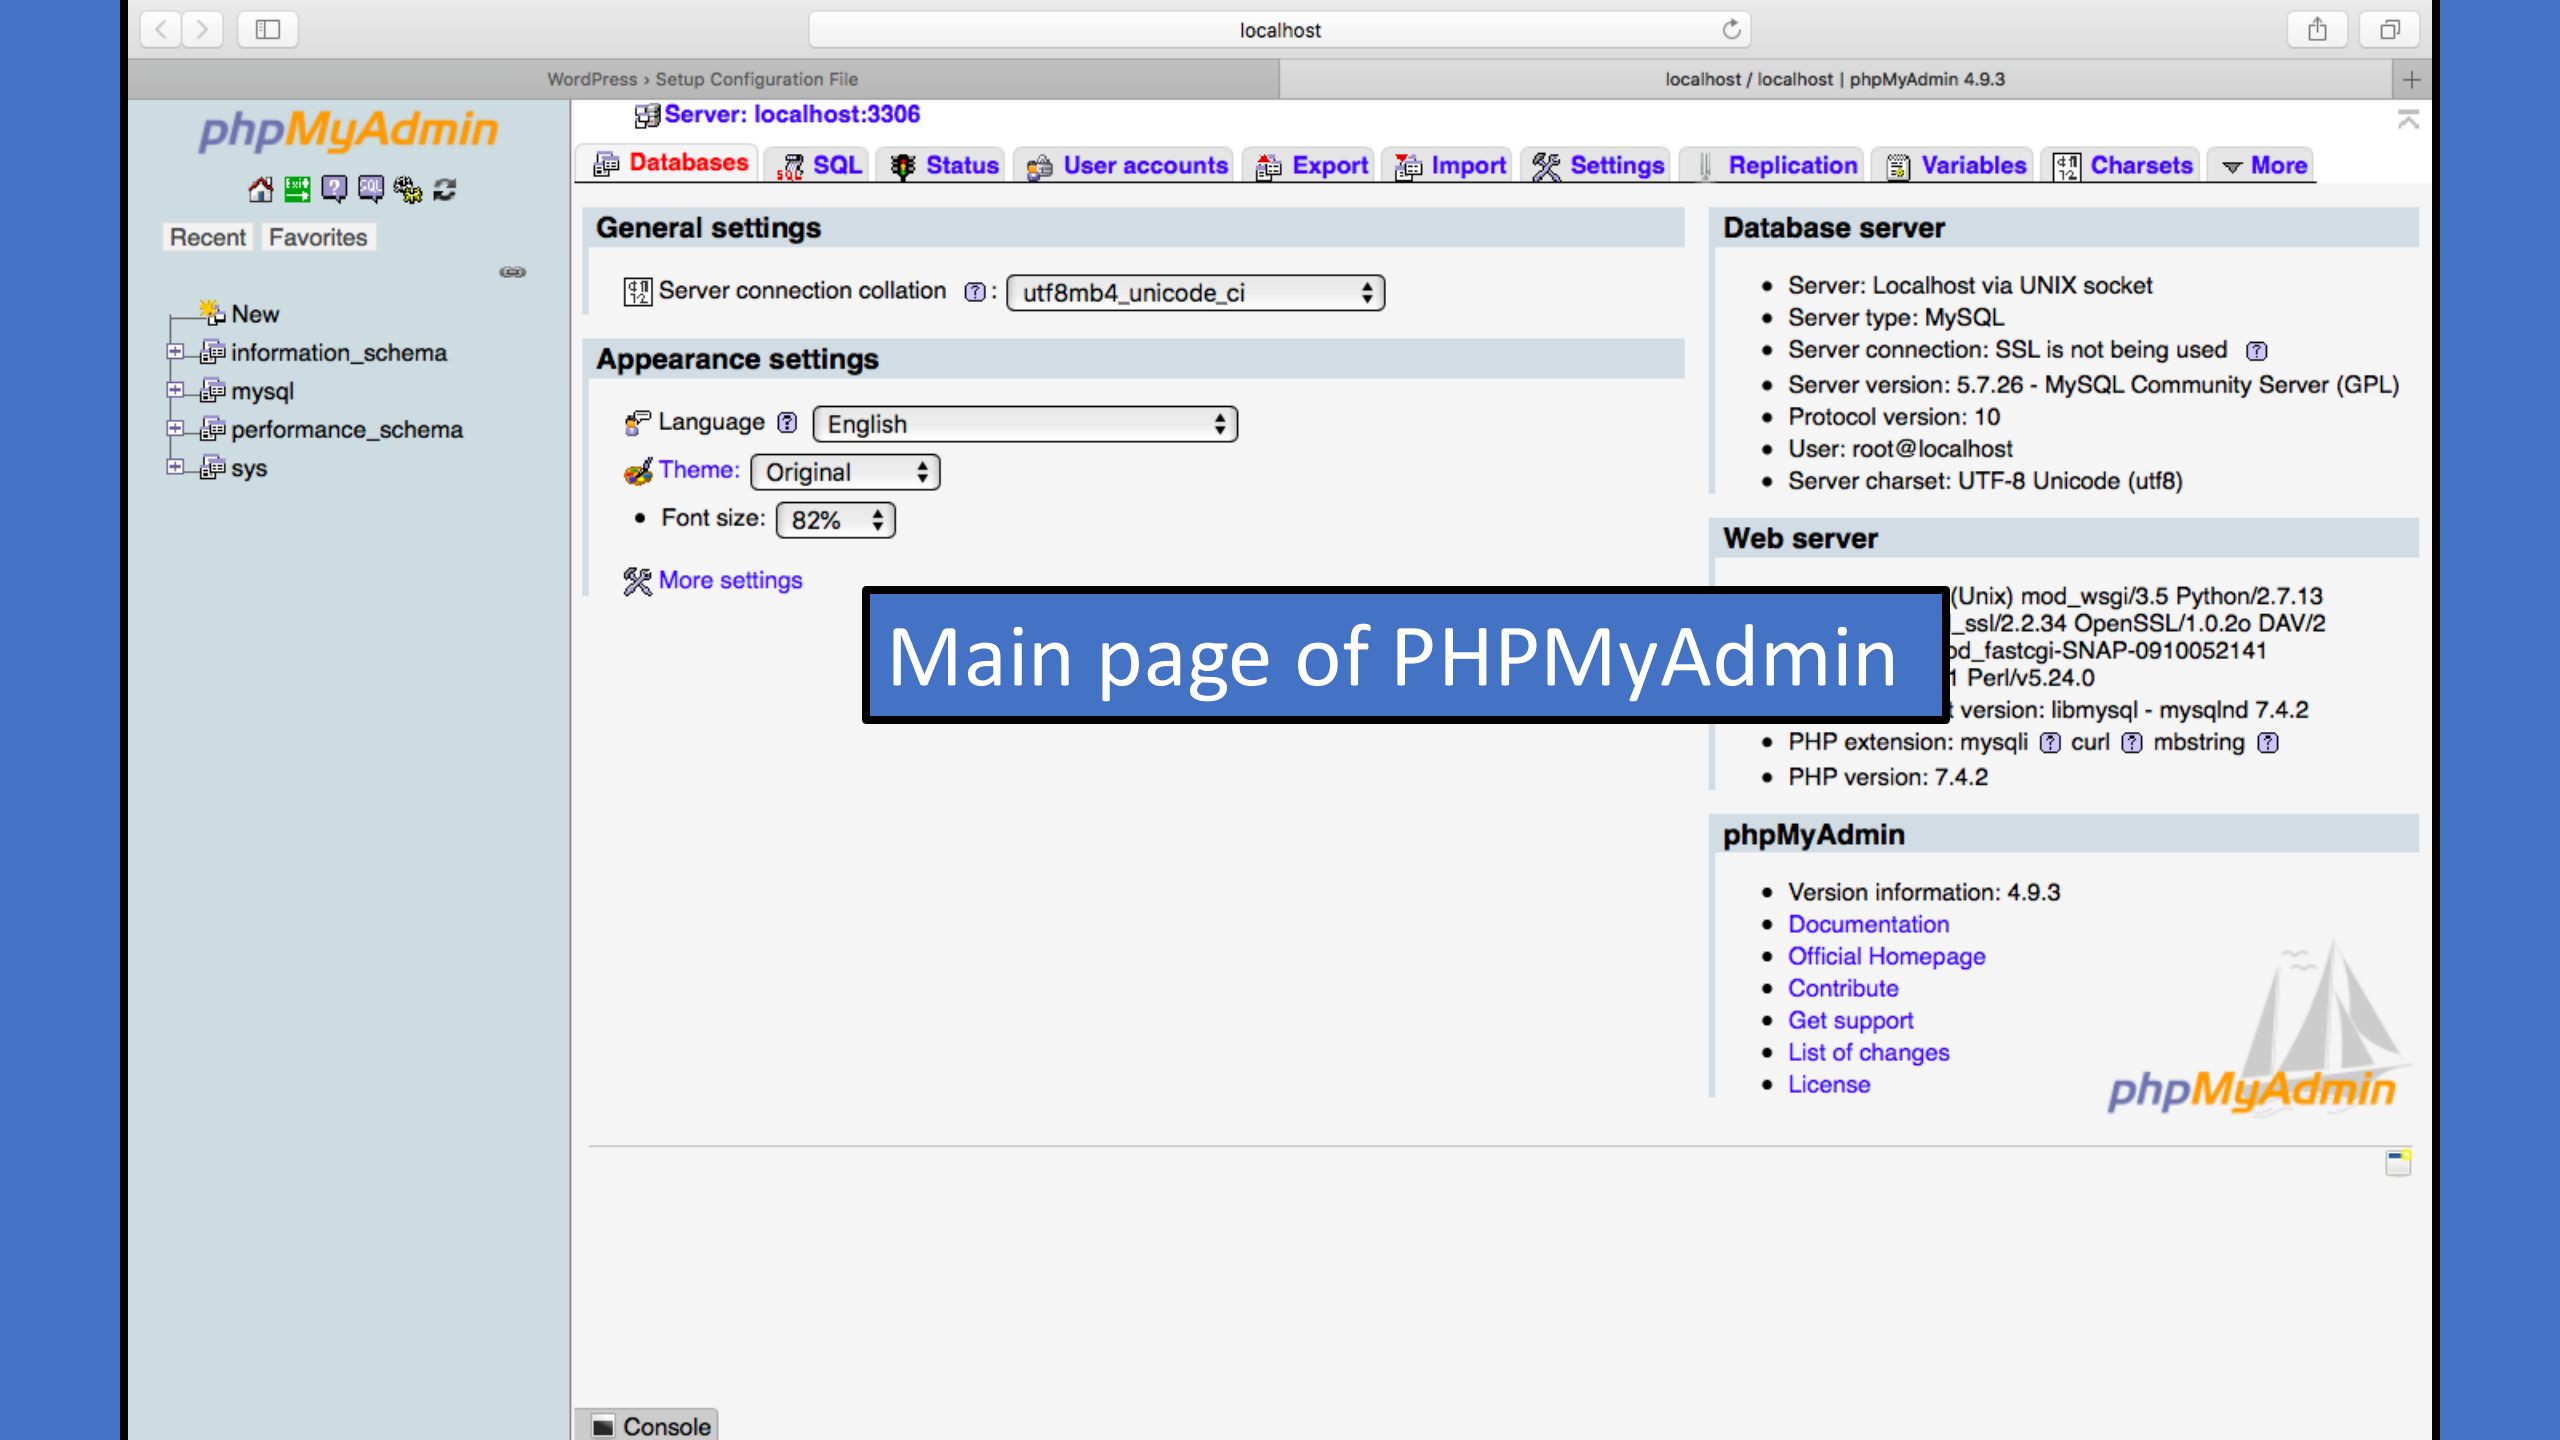

In all likelihood, these items were supplied to you by your Web Host. If you don't have this information, then you will need to contact them before you can continue. If you're all ready...

Let's go!

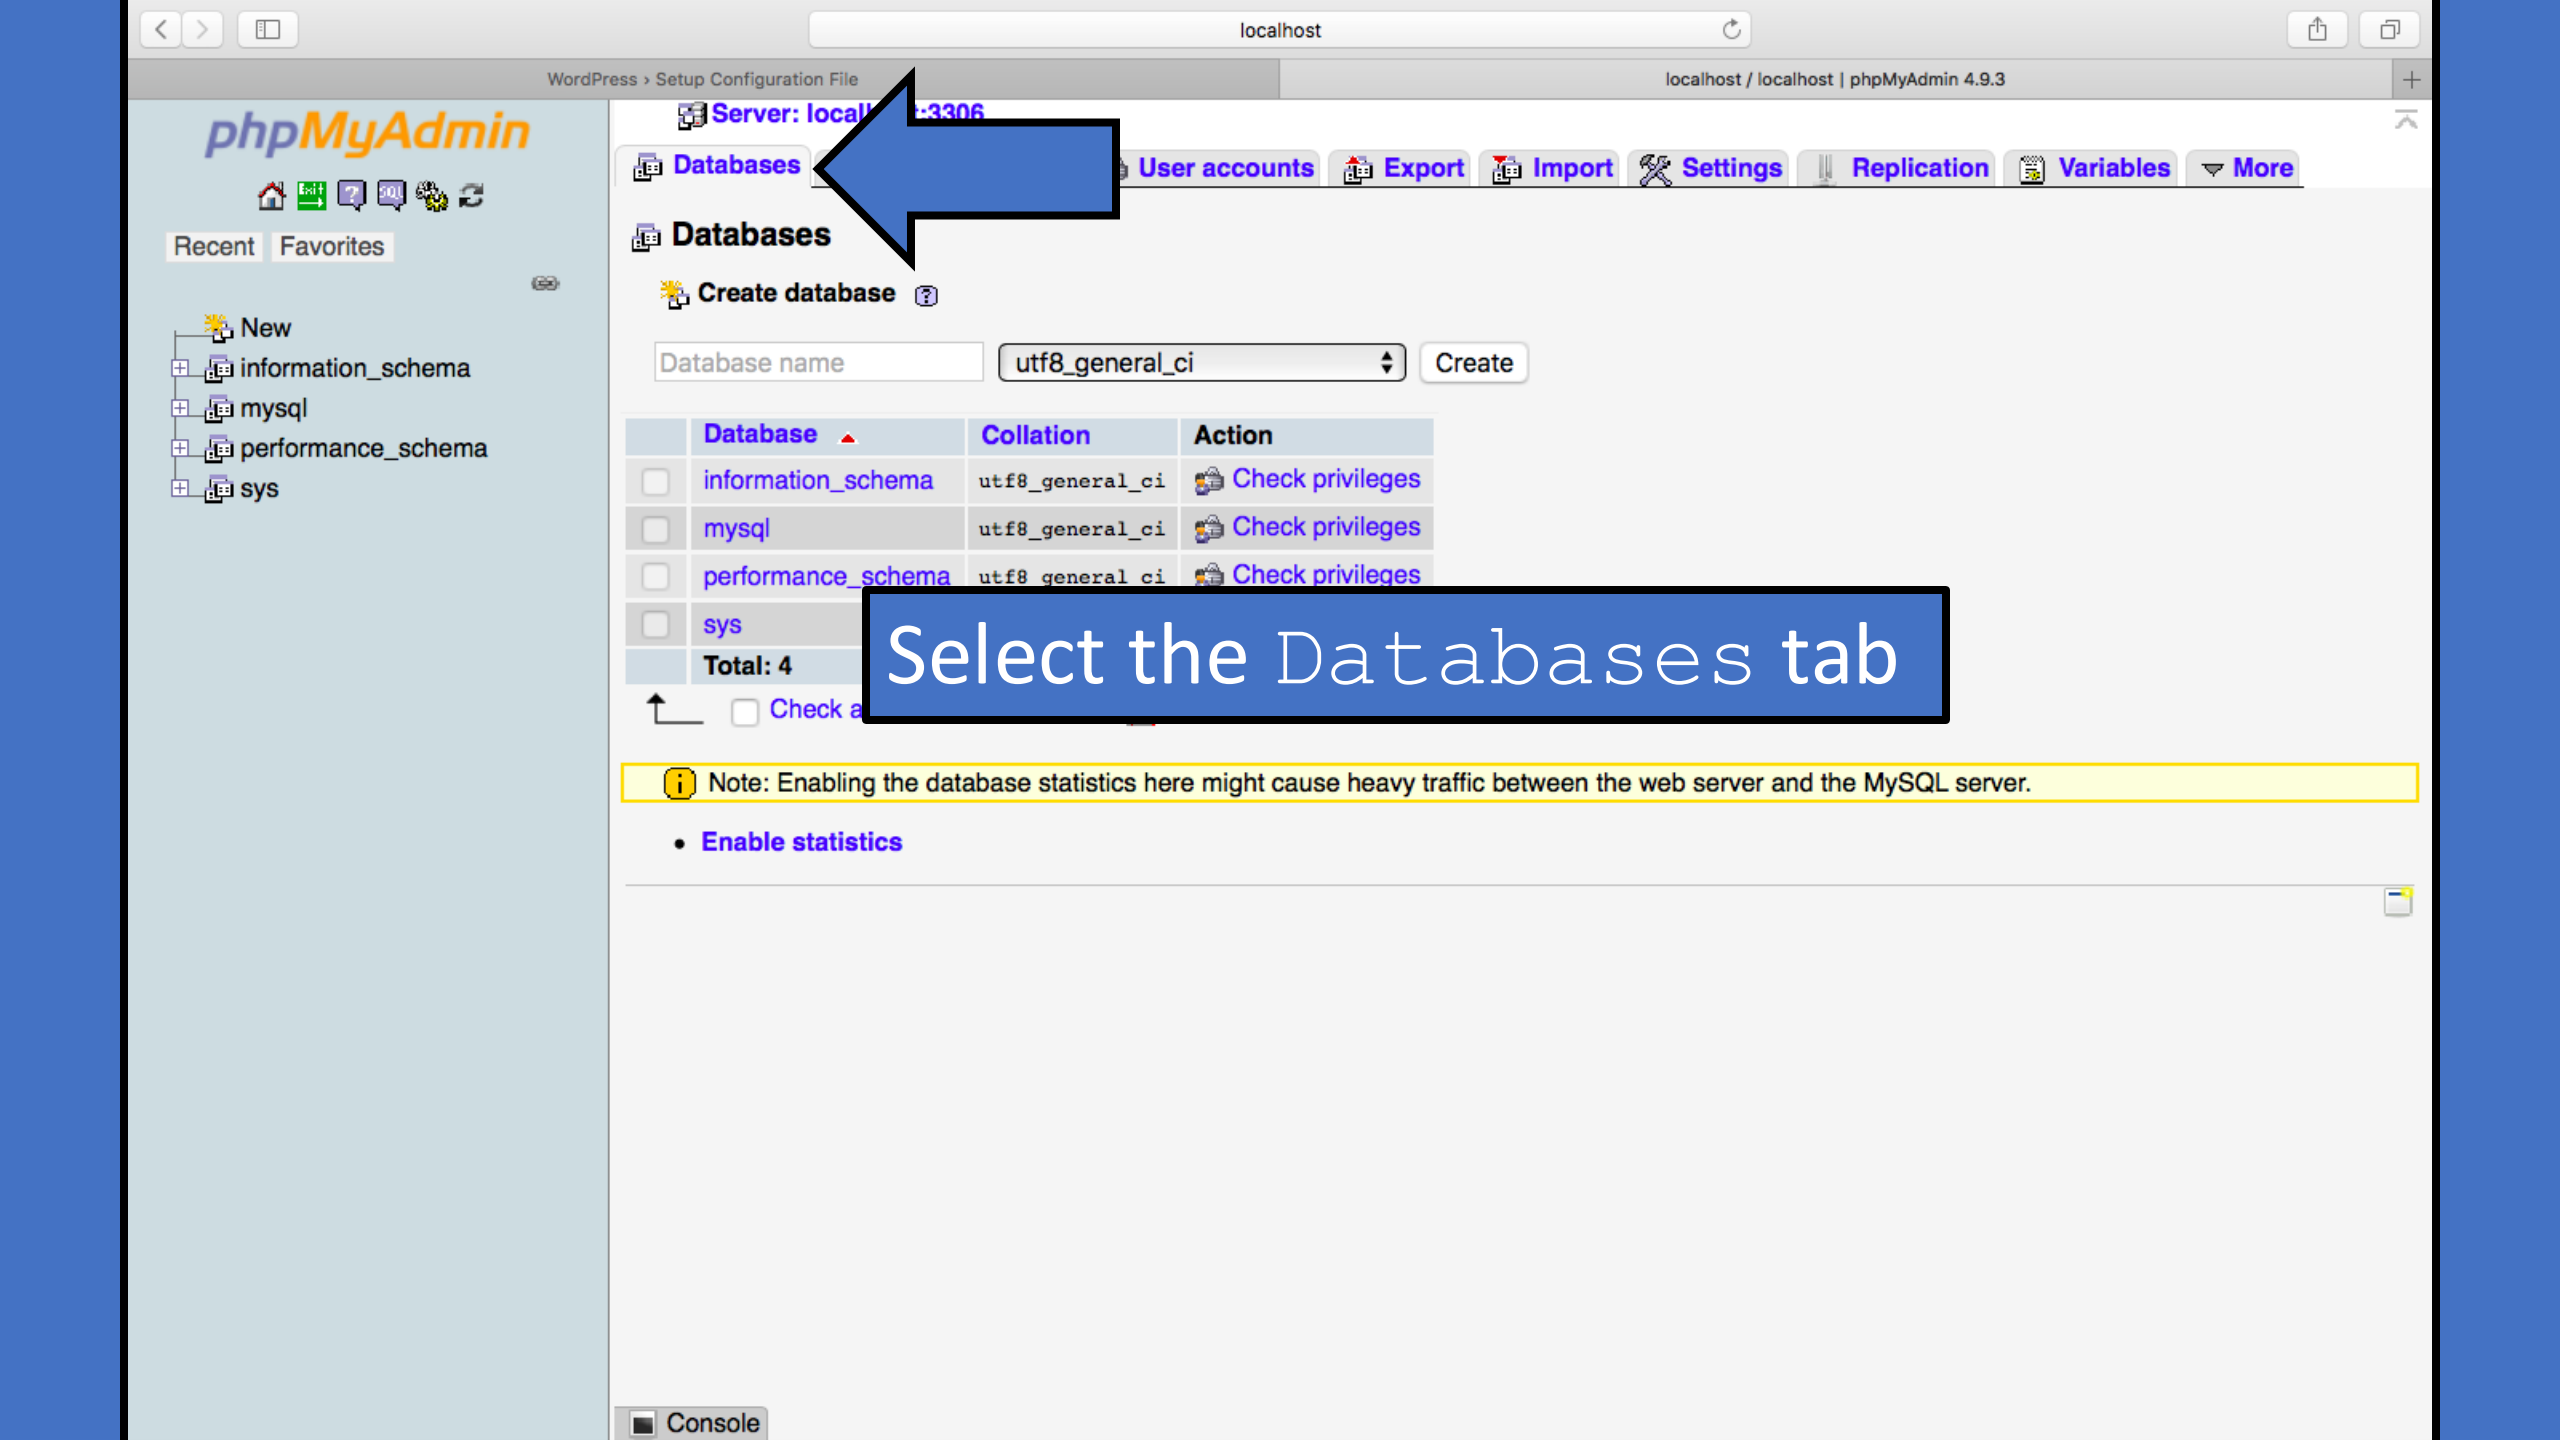

localhost/wp-admin/setup-config.php?step=1
Below you should enter your database connection details. If you're not sure about these, contact your host.

Welcome to WordPress. This is your first post. Edit or delete it, then start writing!
Edit
Your first site with WordPress. You can see a **Post** content type in the homepage.

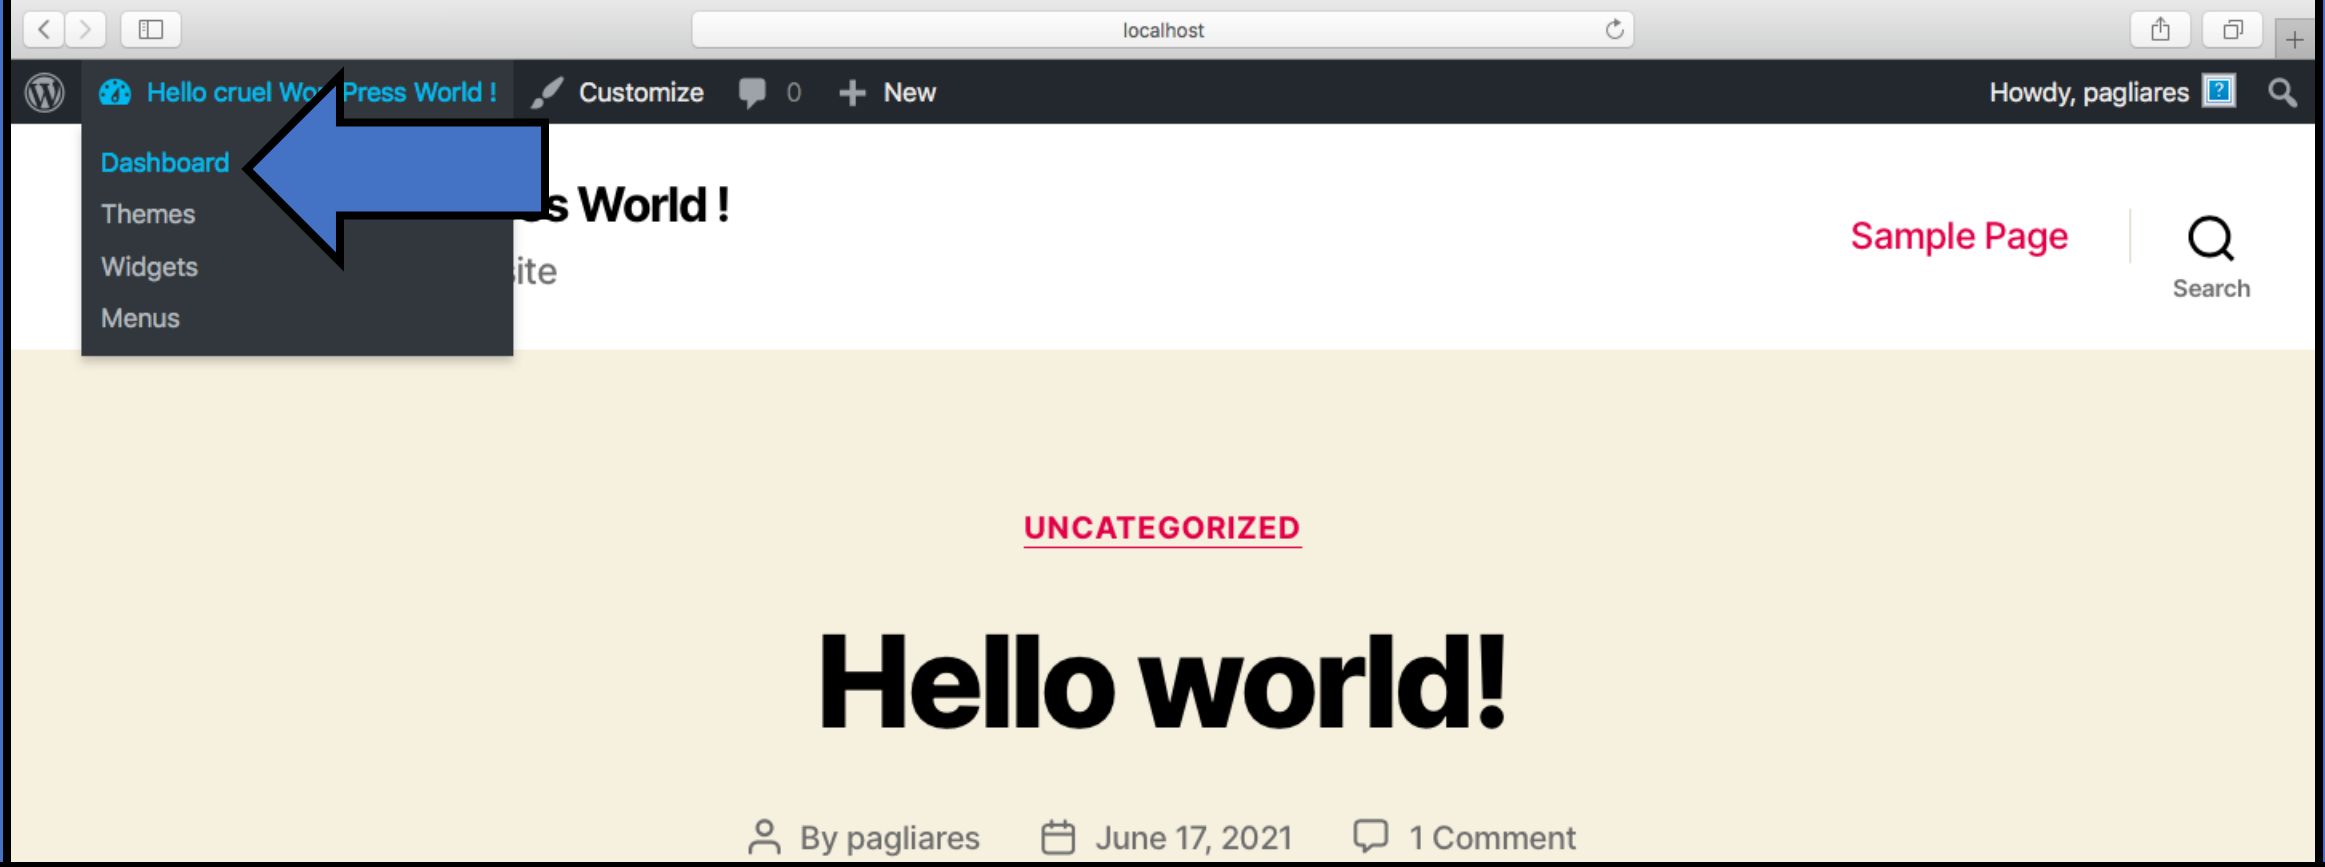

Notice the *author*, *date* and *comment indicator*. Posts are typically used for *time-sensitive* or news-like content.

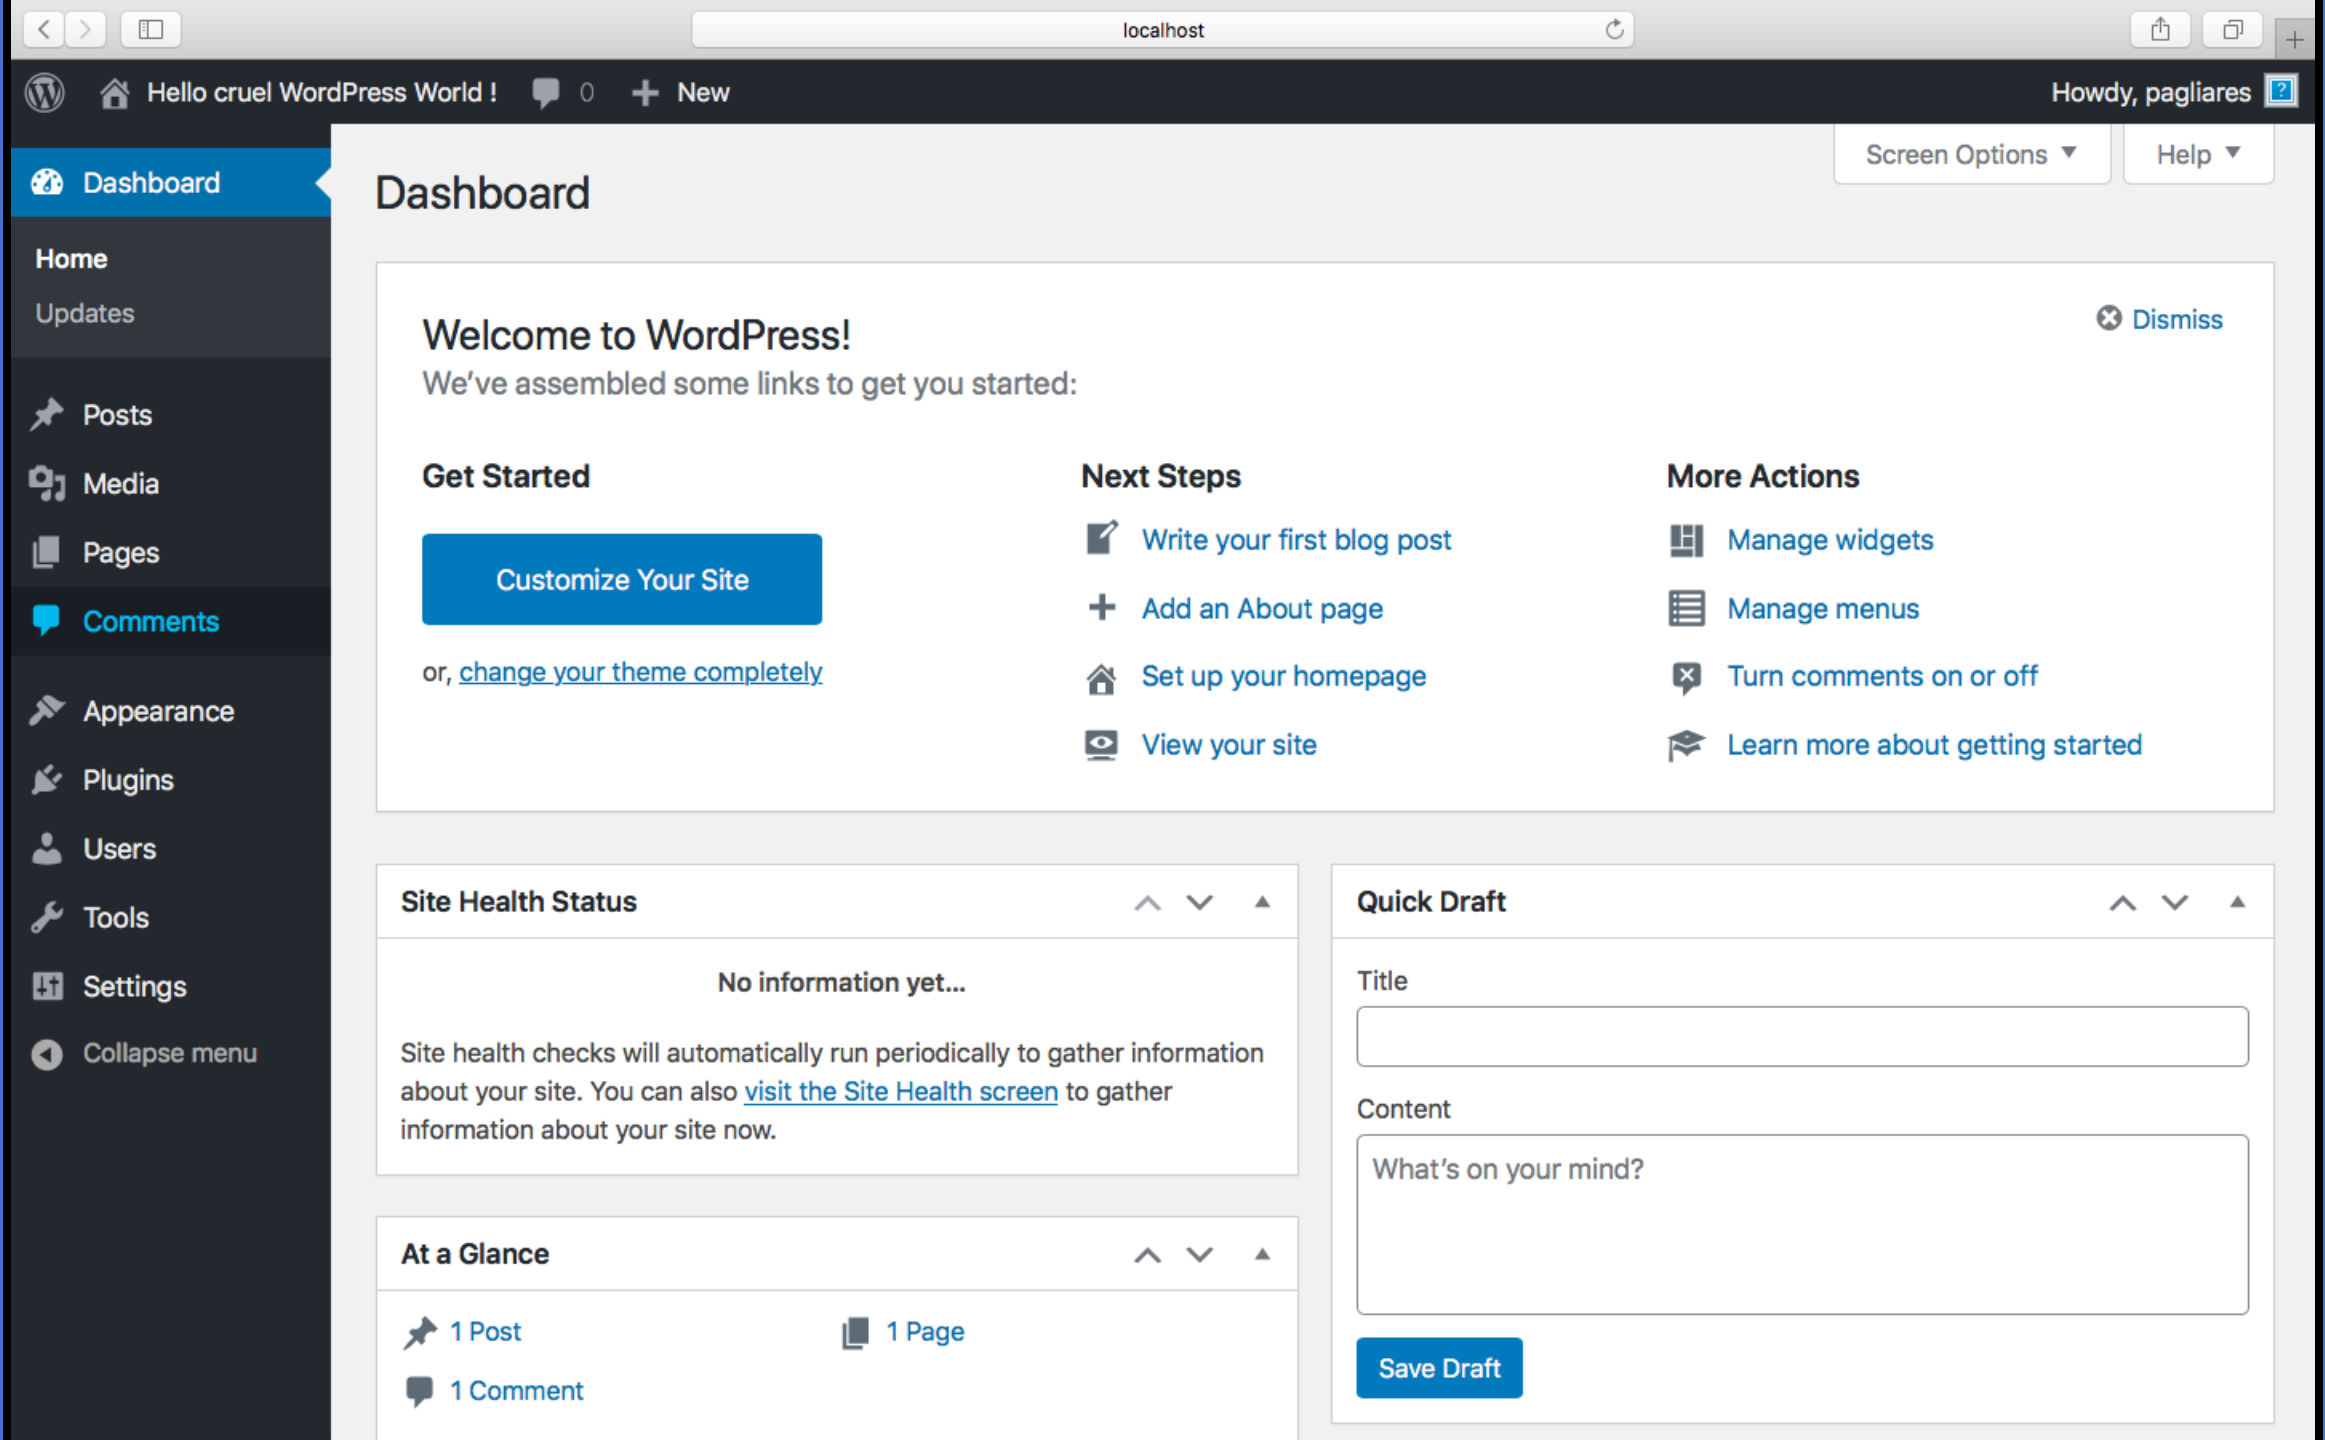

In addition to a Post content type, a Page content type is also generated. Click here to access it.

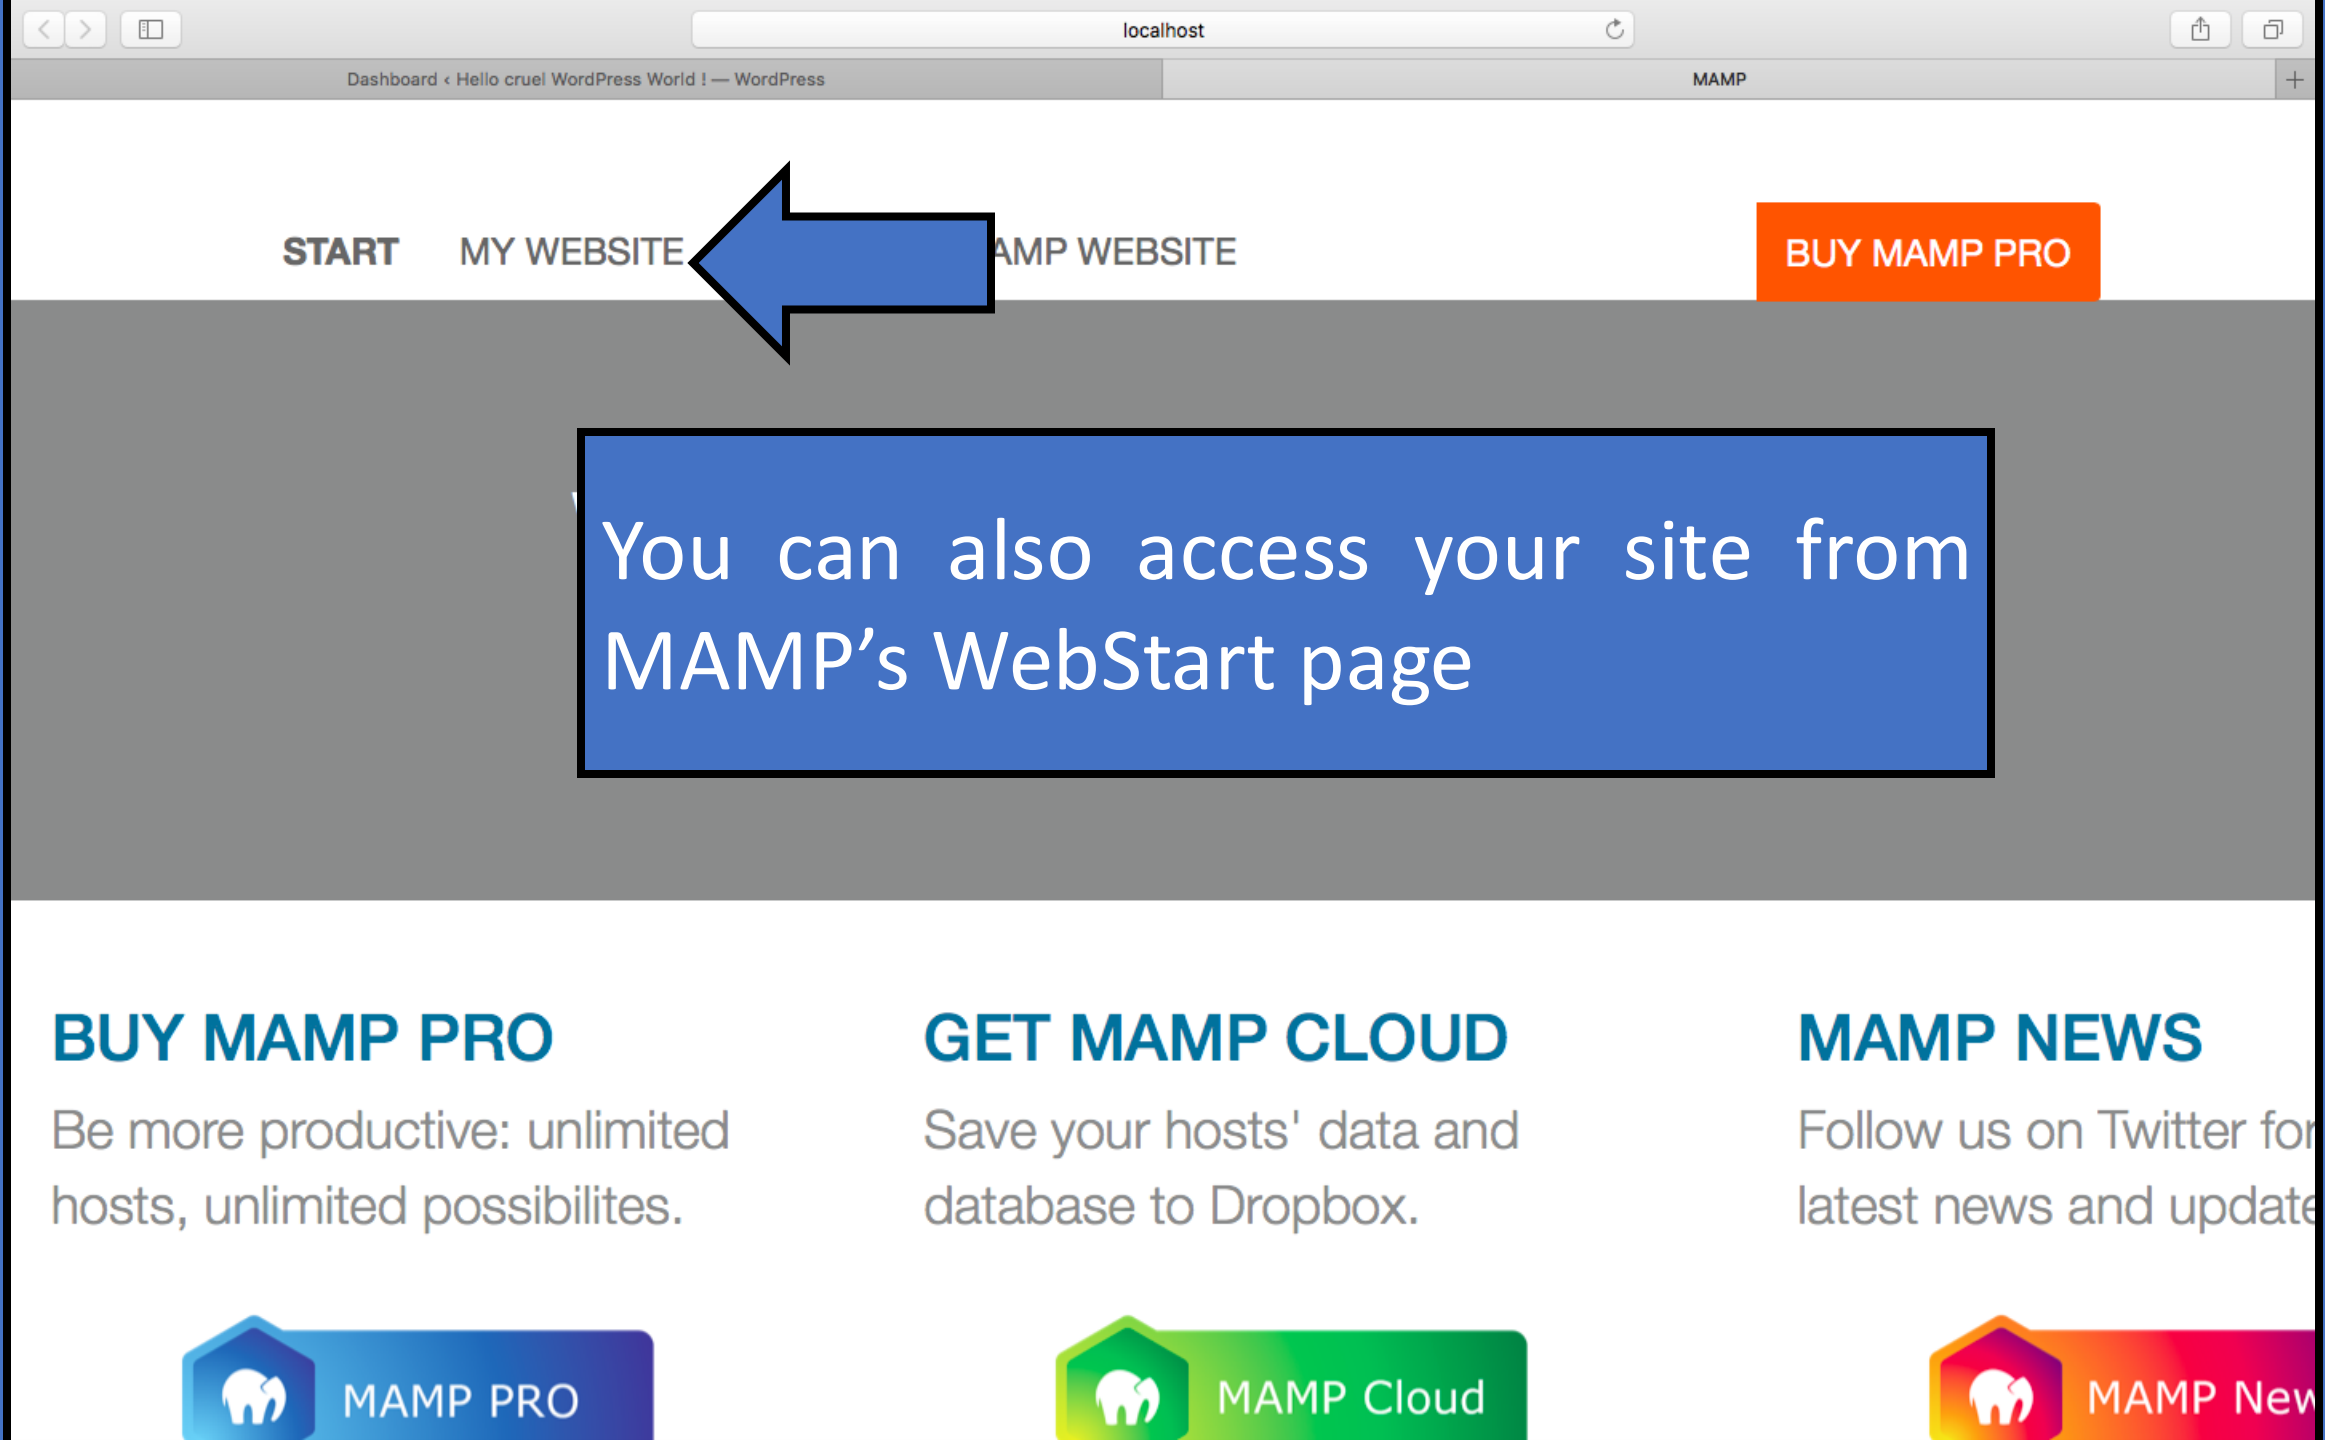

Differently from a Post content type, a Page content type in WordPress does not include an author and date of publication.

Switching back and forth from the administrator page (Dashboard) to the website frontend is something you will do frequently as a web developer working with WordPress. Let's return to the Dashboard

WordPress uses the concept of themes to define the appearance of your website. Let's access them.

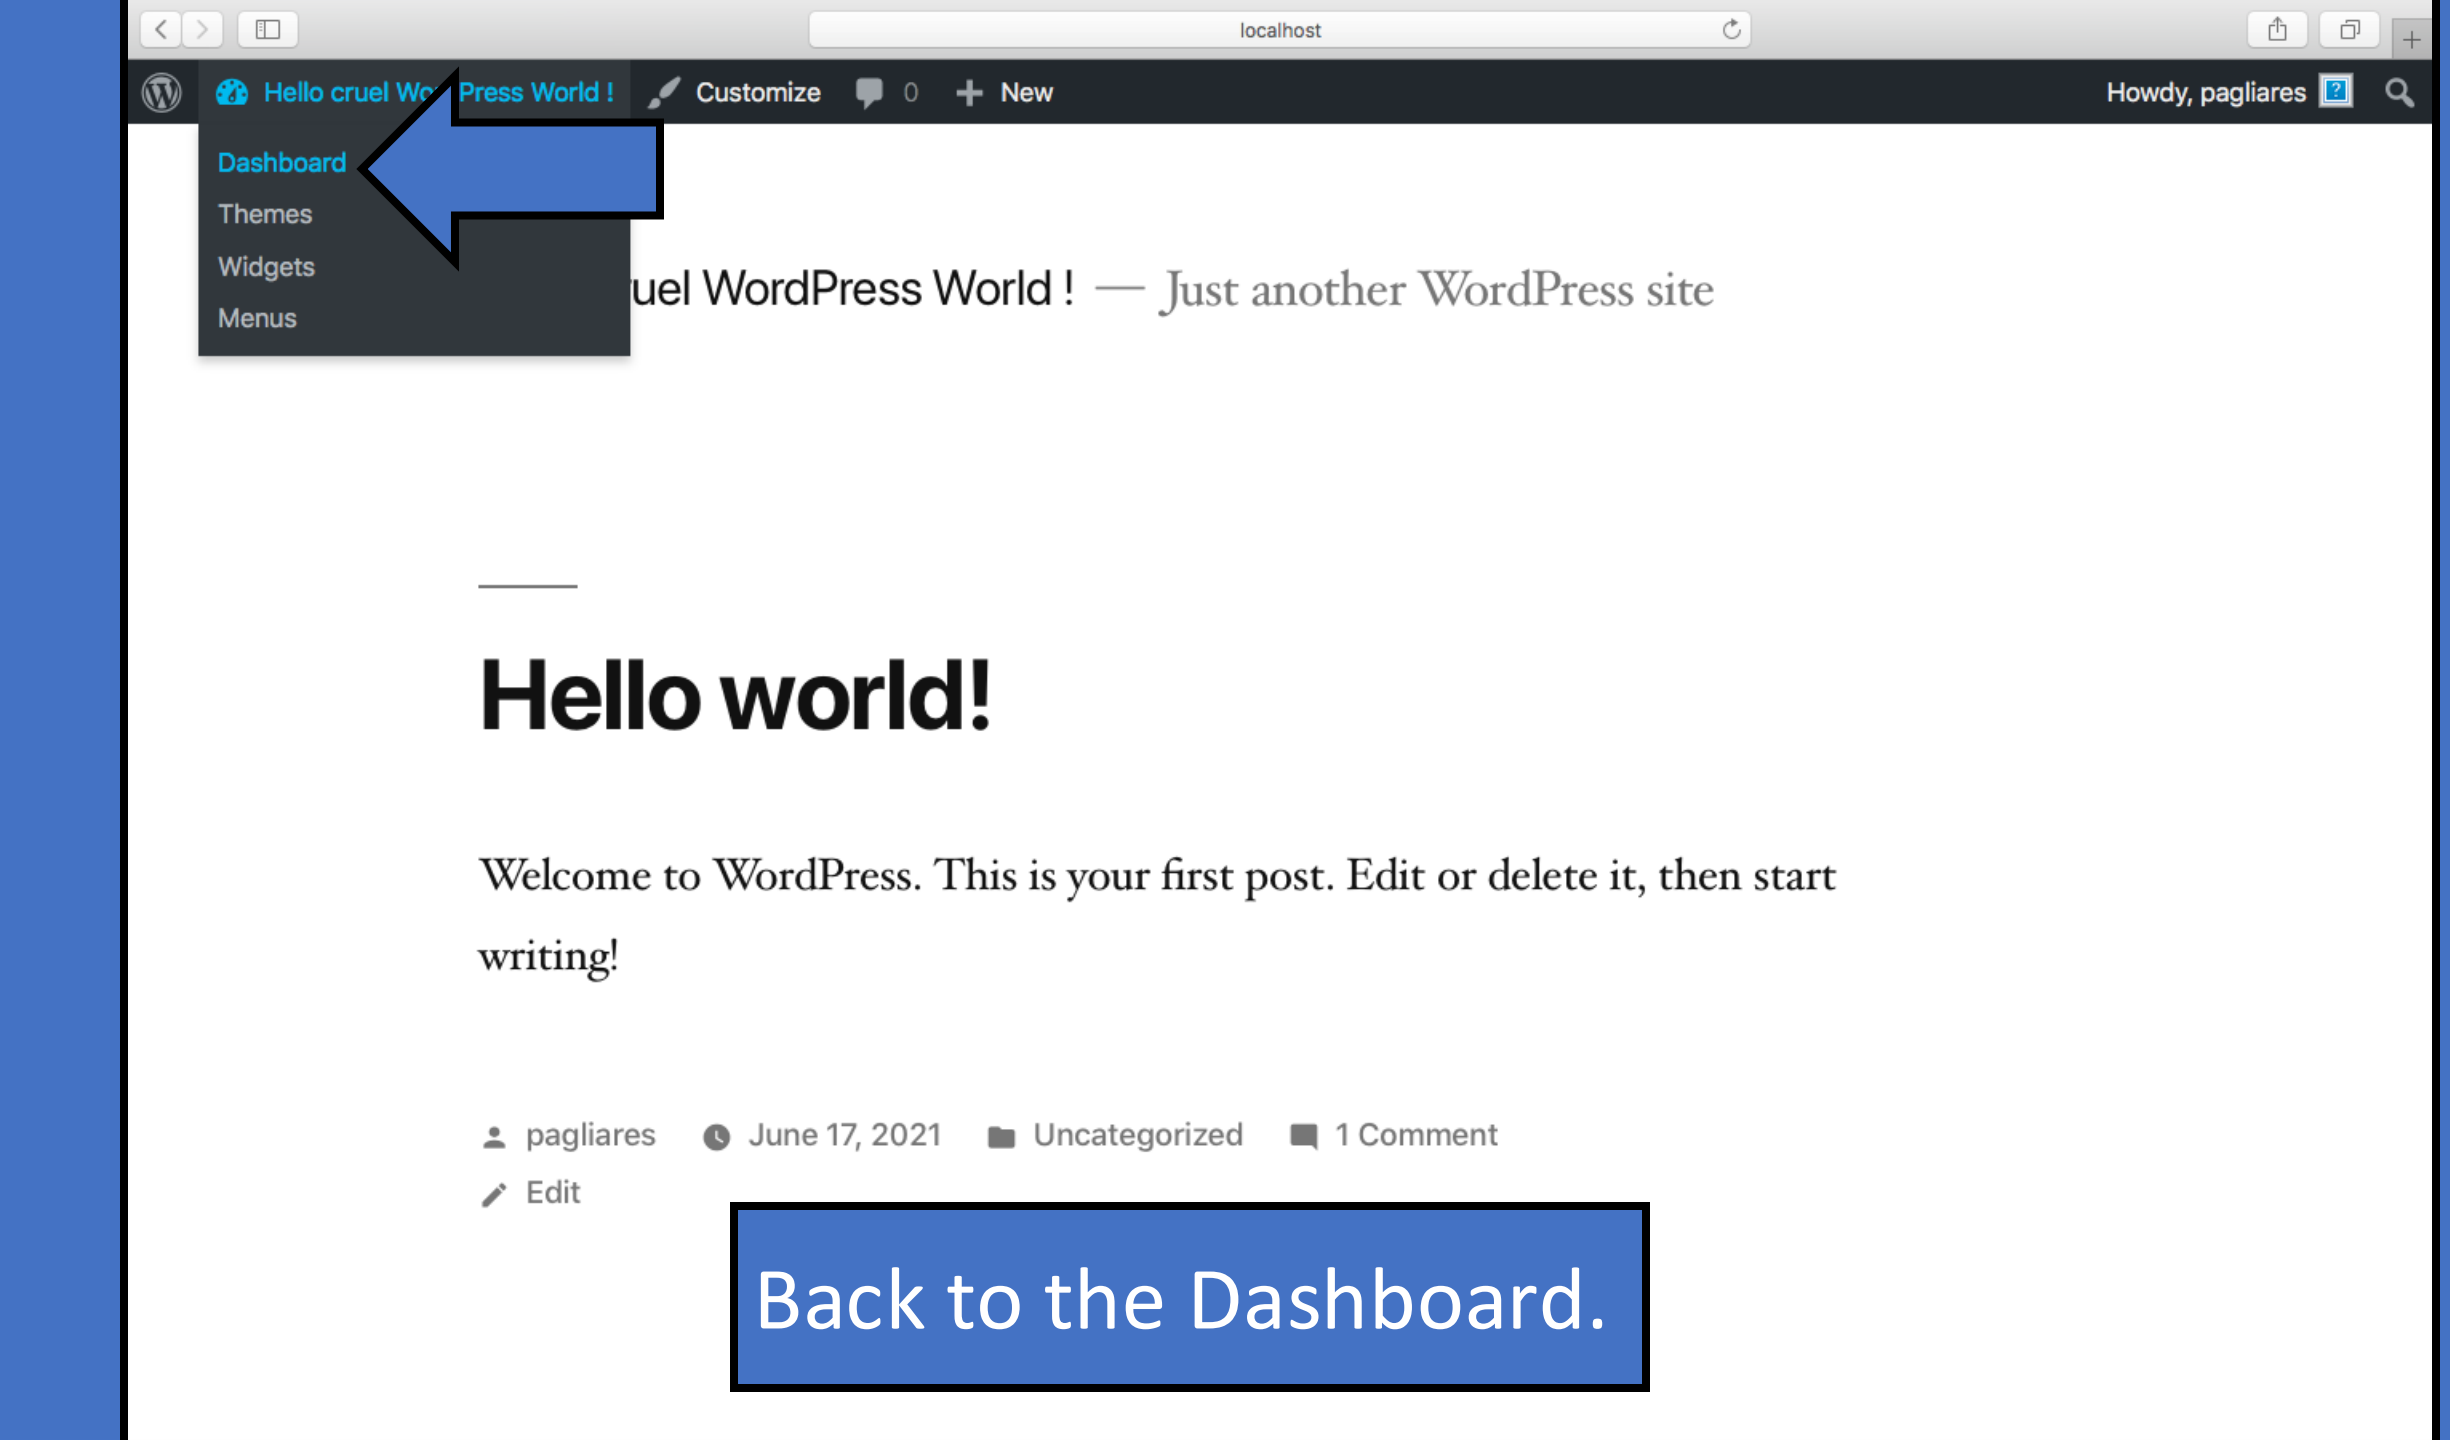

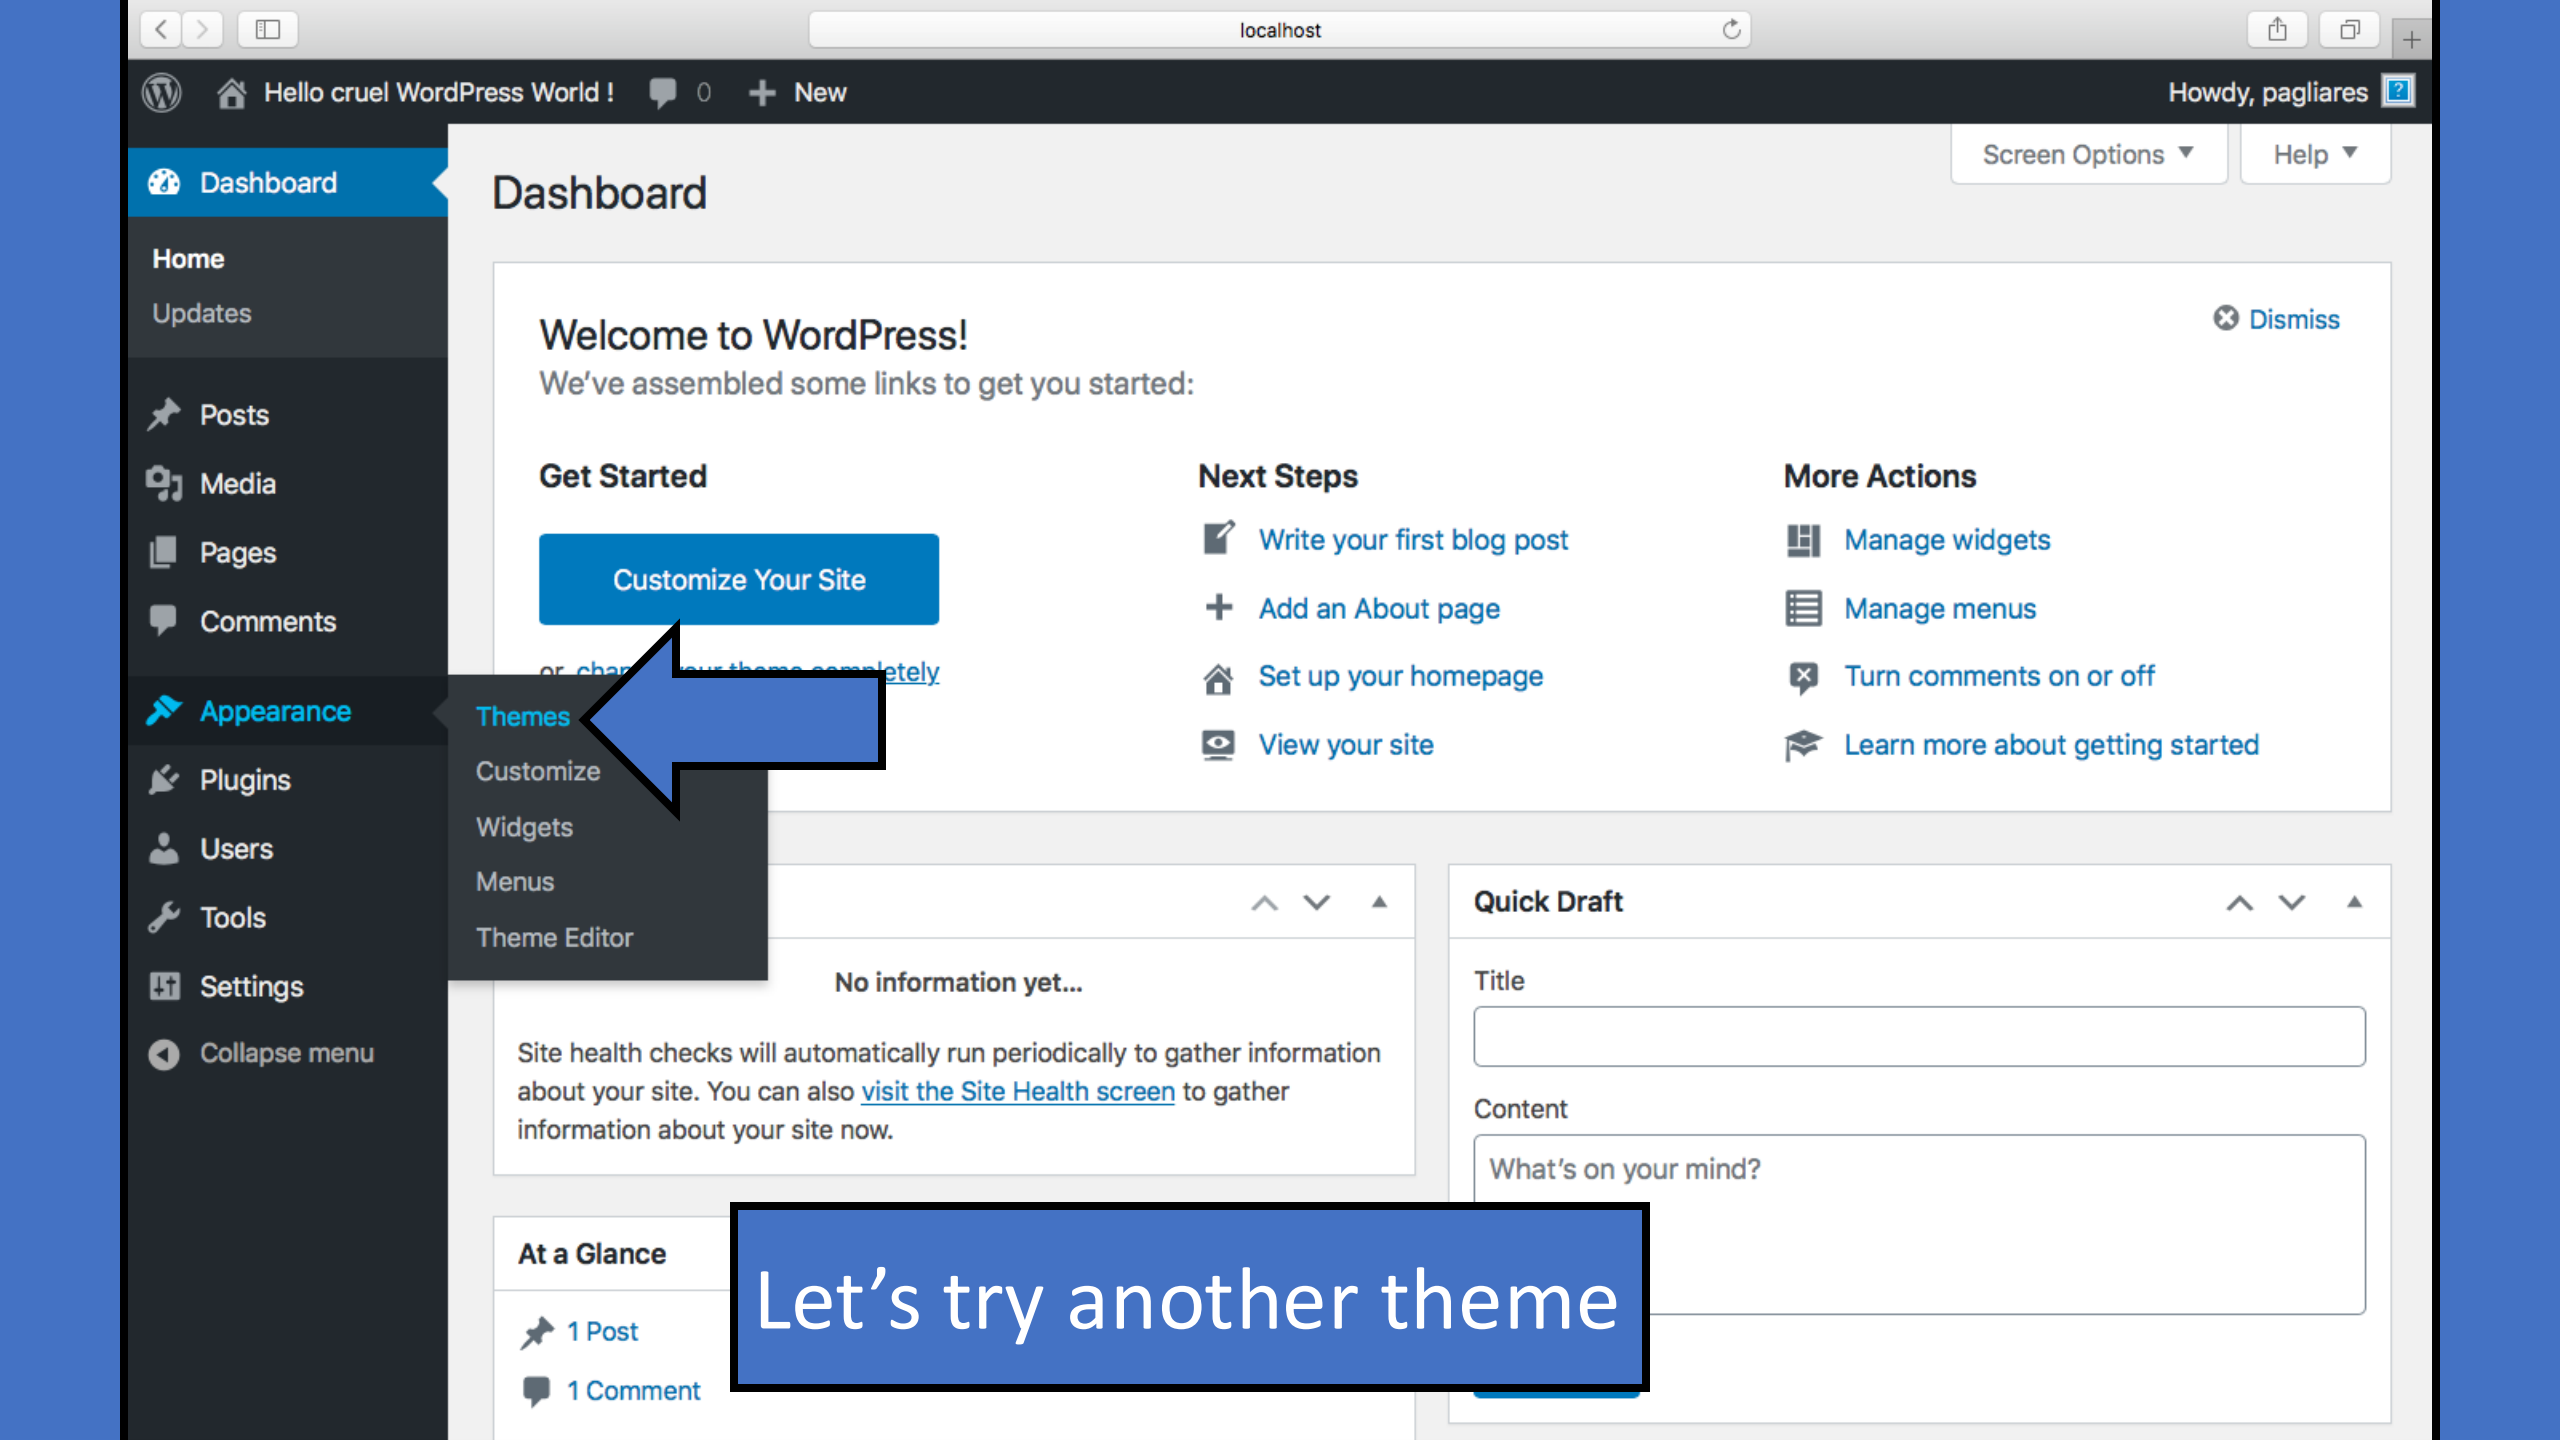

The theme used during the generation of your first web site is called Twenty Twenty (2020). We can change it.

localhost/wp-admin
Safari Can't Connect to the Server
Safari can't open the page "localhost/wp-admin" because Safari can't connect to the server "localhost".
As you can see, Apache is stopped now.

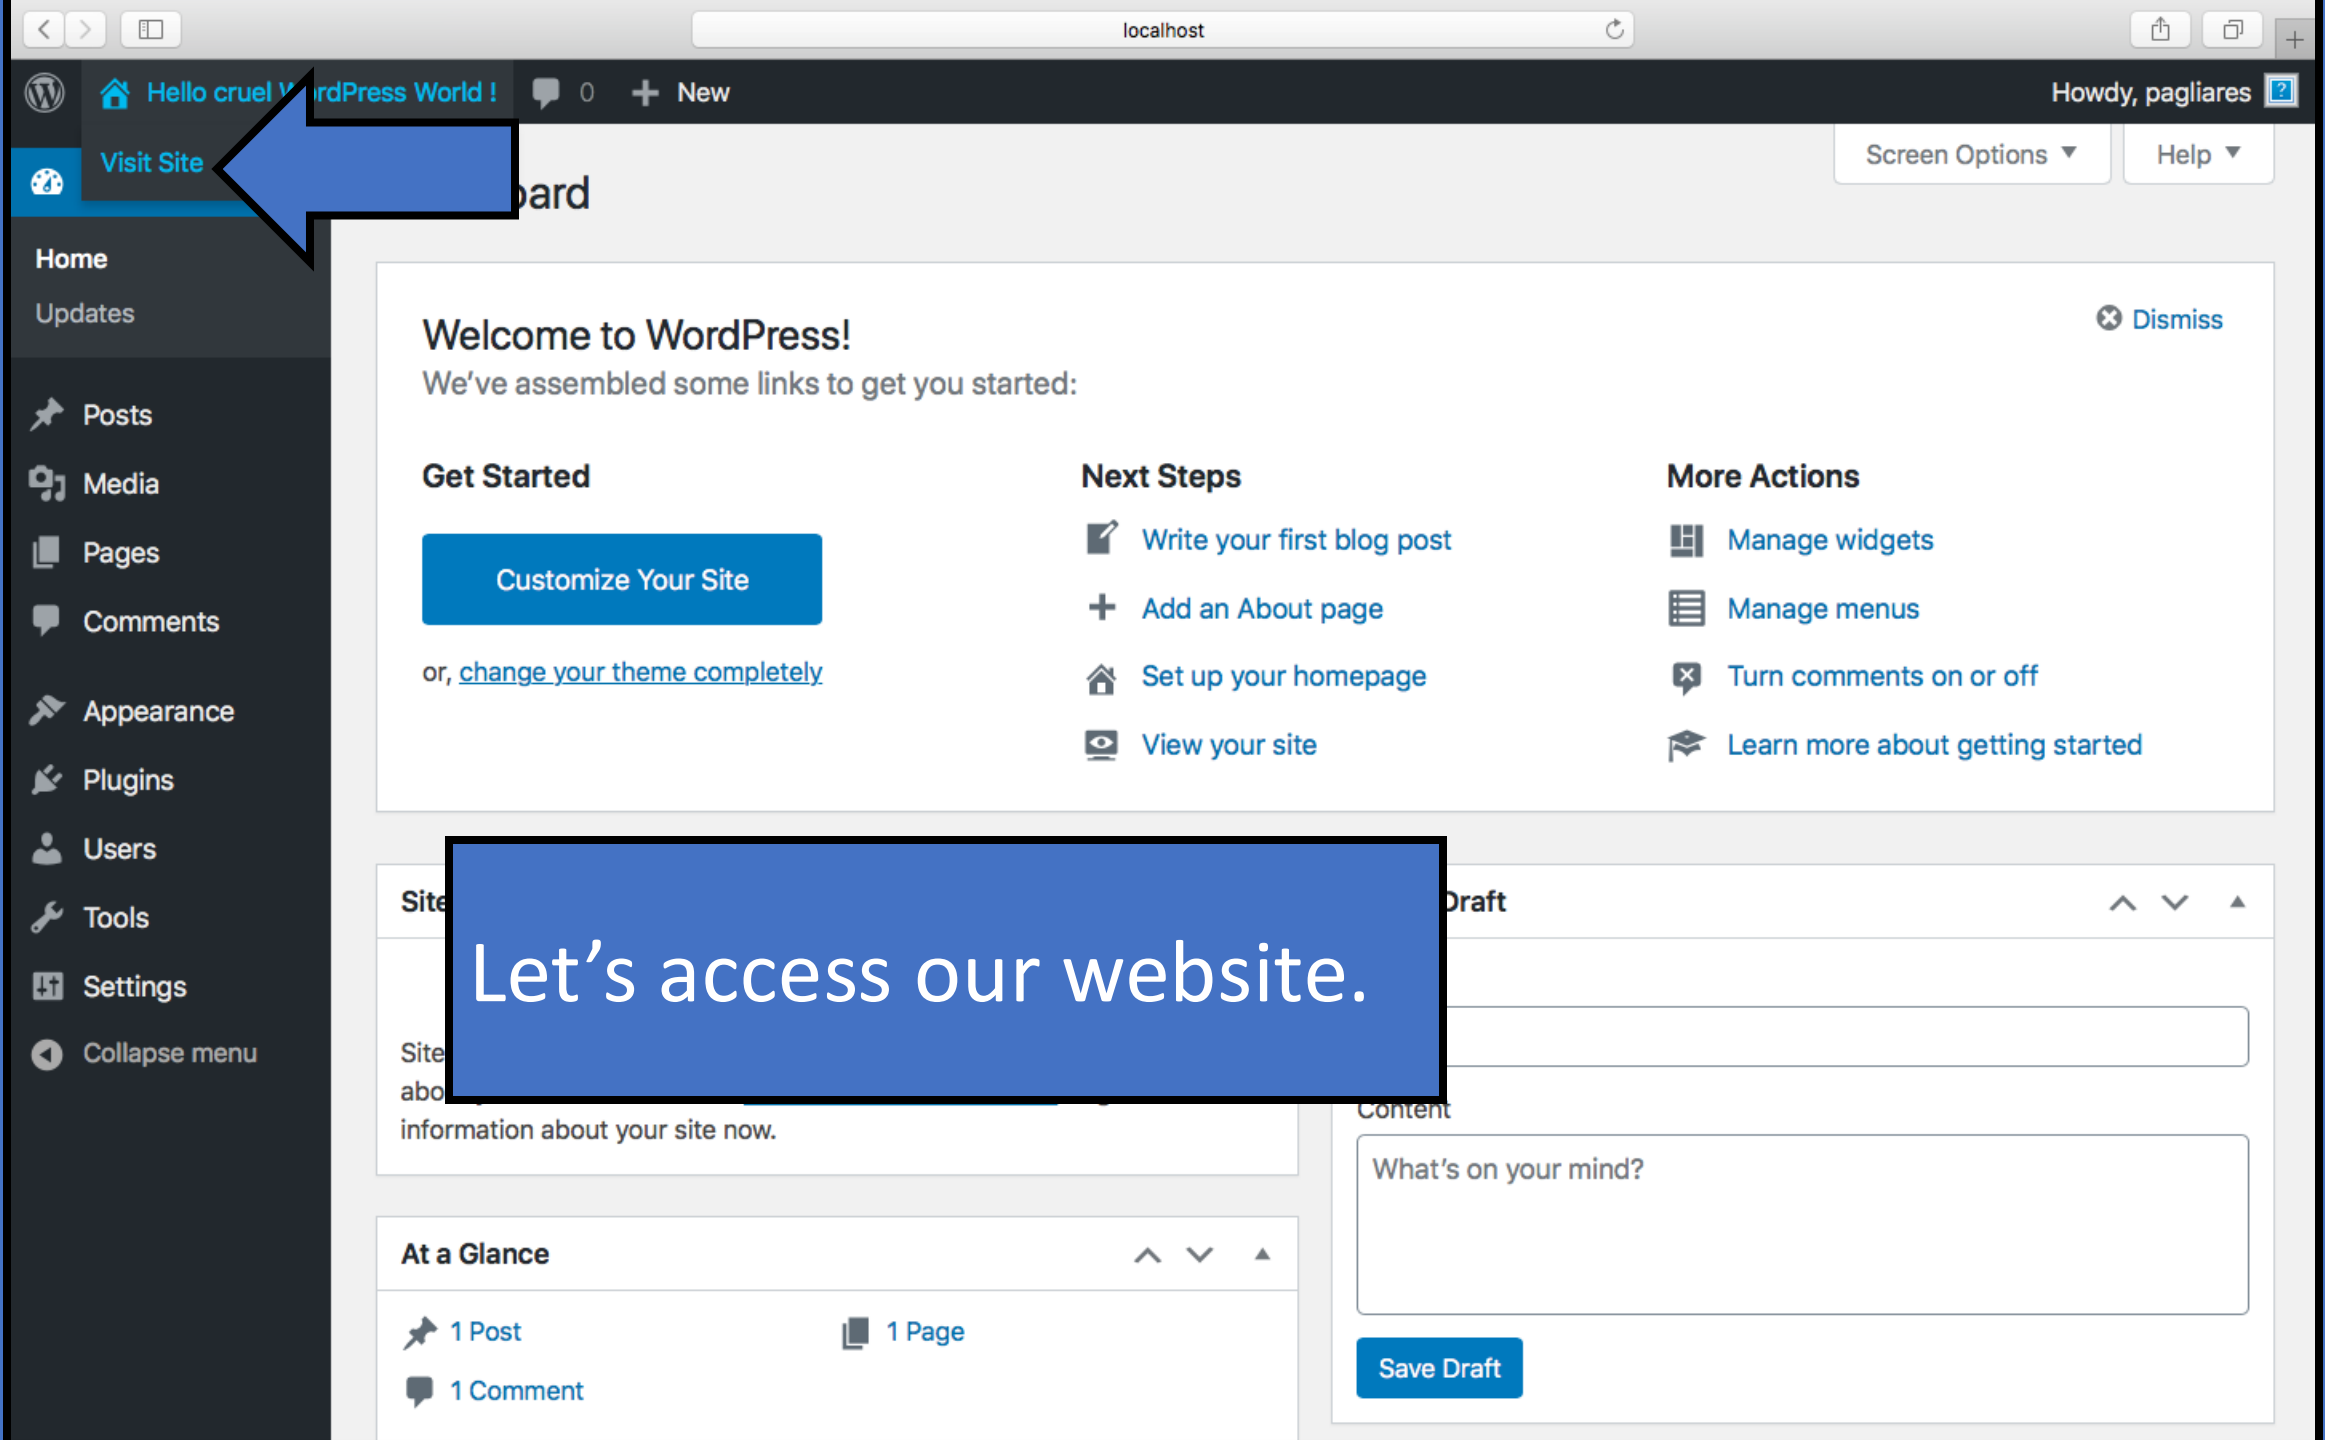

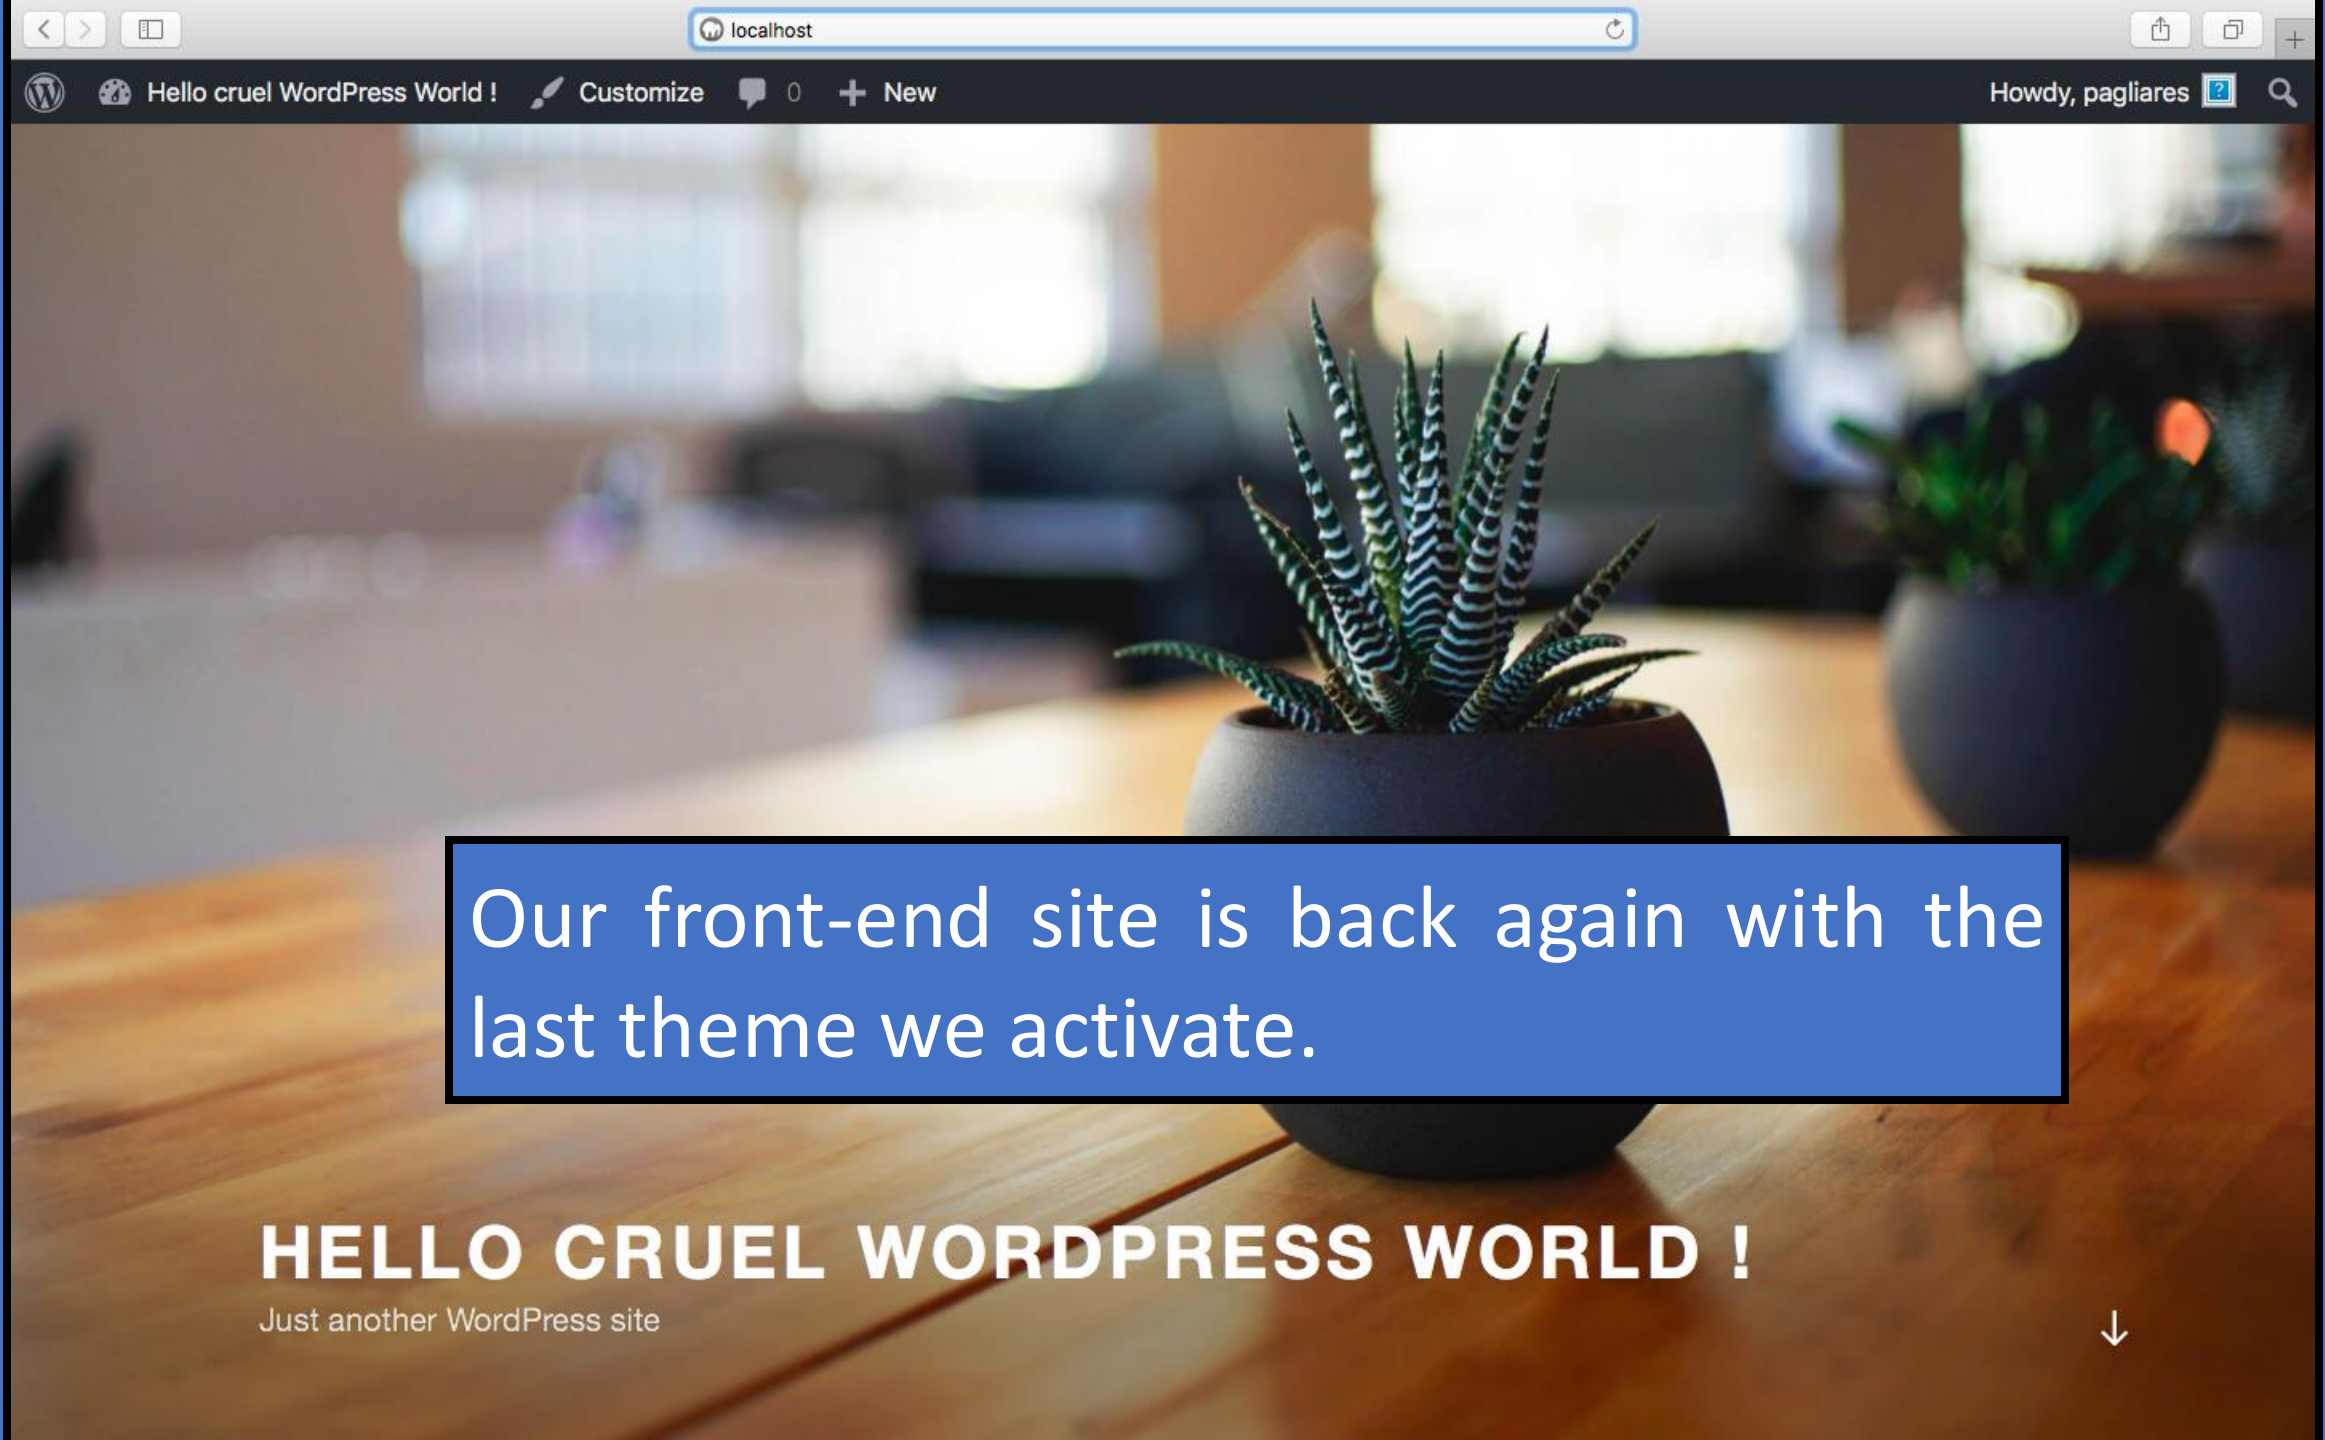

Let’s start our servers again
