Learn to style HTML using CSS

Cascading Style Sheets — or CSS — is the first technology you should start learning after HTML. While HTML is used to define the structure and semantics of your content, CSS is used to style it and lay it out. For example, you can use CSS to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.

Looking to become a front-end web developer?

We have put together a course that includes all the essential information you need to work towards your goal.

Get started

Prerequisites

You should learn the basics of HTML before attempting any CSS. We recommend that you work through our Introduction to HTML module first.

Once you understand the fundamentals of HTML, t
CSS at the same time, moving back and forth betw
more interesting and much more fun to learn when you apply CSS, and you can't learn CSS without

Previous Overview: First steps

With the things you have learned in the last few lessons you should find that you can format simple text documents using CSS, to add your own style to them. This assessment gives you a chance to do that.

Prerequisites:	Before attempting this assessment you should have worked through the rest of the CSS basics module, and also have an understanding of HTML basics (study Introduction to HTML).
Objective:	To have a play with some CSS and test your new-found knowledge.

Jane Doe

Web Developer

Far far away, behind the word mountains, far from the countries Vokalia and Consonantia, there live the blind texts. Separated they live in Bookmarksgrove right at the coast of the Semantics, a large language ocean.

A small river named Duden flows by their place and supplies it with the necessary regelialia. It is a paradisematic country, in which roasted parts of sentences fly into your mouth.
